No, but I would suggest that he know and be able to do mathematics
without thought (or calculator) to make him a 'real' engineer. Math
is the fundamental "mode" of all the sciences; it transcends language
barriers -- any two engineers any where in the world can communicate
their engineering ideas via math.

Do you see an analogy?

Something I haven't heard in the pro/con is where was ham radio going
before the restructuring? In the toilet, that's where. The number of new
hams is running 10% of the dying ones and the wireless community is
demanding a lot more bandwidth and of course, are looking at the ham
bands for their finacial survival. There are 100 million potential
wireless users and diminishing hams at about 400,000 now and potential
or 100,000 by 2005. There will be no ham radio in 2006 unless this gets
turned around. Face it people need internet on their wrist far more than
they need to pass signal reports with Tibet.

Ah, but W1AW's transmissions are not intended for reception by the general public. Their transmissions are intended for those with interests in ham radio and Morse code and that is permitted by FCC regs. If you're contending that the general public is interested in learning Morse code then perhaps we should contact NBC and see if we can get 20 wpm code practice on prime time.

Most hams are so disagreeable that young people don't
want to be bothered. I got my first ticket about 12 years
ago, went to the local club, found mostly retired people who
did not not even want to talk to anyone under 65. So I keep
my ticket and don't use it.

I will admit that the FCC had an agenda of maintaining or better yet,
reducing its involvement in amateur radio, but that was it's only
"internal" input to the restructuring. The ARRL wasn't the only input
they considered and it was (so they claim) only considered as one of
some 2200 comments received on the NPRM. (Someone ought to use FOIA to
get them and publish them, before the FCC destroys the comments) The
arrogant ARRL is always "surprised" when someone doesn't follow their
suggestions.

A great singer once wrote 'these times are a changin'.
I think it is wonderful !!! Something needed to happen to keep the average age of the ham operator under 65. Any change is better than no change. 'No change' just gets old and goes away.
People's lives are faster, busier, more complicated than ever. People's attention span is about a day on any hobby. A hobby where it takes months of studying to achieve something is not going to last anywhere in this world today....

I'm not saying I agree with all this but let's face it, it is the way it is. Just think how much time you spend on the internet now that used to be on the airwaves. Everyone is guilty. We just need to deal with it and be happy.

Forget the call sign worries. Be glad to be a ham.

It sounds like many old Hams would prefer the Amateur band getting devoured
by commercial wireless so their "good name" will be preseved forever. To
heck to those who would like to enjoy it in a different way.

No, but you don't have the right to put someone down because they don't
share your viewpoint of how things should be.

There's a difference between "liking" someone, and tolerating someone.
No one is suggesting that you give new a 5 WPM extra a big Barney hug,
but he is entitled to be respected as a person in spit of the fact that
he didn't have to endure the 20 WPM hazing ritual.

> "don't have a close minded, bigoted and predjudicial (sic) attitude".

Anyone who is not willing to accept that things change, and be able to
move on, without sour grapes, and a refusal to show "good will" to
newcomers, IS a stuffed shirt. Again, you have NO right to prejudge
anyone, based simply on their perceived "worthiness" (in your opinion).
If they pass the required FCC tests, they are entitled to the privileges

as hams, as set forth by the FCC.

Bottom line: your opinion is irrelevant. The law is the law.

>
> Neither a license class nor a callsign will make you other than you are.

An open minded individual who is not afraid of change, and who welcomes
the modernization of the ham radio service, and who has little sympathy
for those who refuse to accept it.

Cecil,the post said the requirements were dumbed down,not the
people.If you still have trouble understanding this concept feel free to
call me collect weekday afternoons and I will try to tutor you a little.

Gary - KJ6Q wrote
>I suppose if *I* had YOUR gift of mindreading - and knew for a FACT
>exactly what and attacker/mugger wanted or would "settle for", you
>might be right -

Nobody is a mind reader. I go with the odds. The odds are that you will get shot and possibly killed if you resist an armed robber who has the drop on you. Most robbers want your property, not your life. Shooting you just complicates things for them...

>an elderly couple 2 roads over from us recently
>made that assumption when a deviant teenager demanded their car - and
>then stabbed BOTH of them to death...

For every robbery where someone is injured of killed, there are hundreds of robberies where there is no injury or death. The odds for injury or death are dramatically increased if you resist...

Just last week (in Phoenix) a woman customer at a video store (for some unknown reason) decided to resist an armed robber. She was shot in the head and killed with a shotgun for her trouble. She left a husband and several kids. All the other employees and customers were unhurt...

>but will resist with ALL means at my disposal your
>efforts to make MY choice FOR me! PERIOD!

Gary. Stop and read this carefully.

I do not advocate unarming the public.

I own several guns of my own. This discussion is about whether it is wise to resist an armed robber aiming a gun on you for principle alone. Cecil would die rather than be robbed. I would prefer to live and seek vengeance another day...

Realize YOU can change the rules...anytime...all you have to do is
submit your request to the FCC in the proper format and if it makes
sense, they will consider it and issue a public request for comments.
The FCC seldom initiates any changes to the rules, they are all
triggered by requests. There is also the path of appeal. I don't know
the procedure, but I will wager that an appeal will be made on this
restructuring order. I don't think it will go anywhere since there was
plenty of time to comment on the NPRM..but you will have an oportunity
to bitch to them (in a constructive manner)

The NCT was the result of "whining magpies". Guys like you didn't like
the idea then, so i find it rather curious that you are willing to
accept it now.

I guess it was easy to give someone a NCT knowing full well that you
could hide away on your HF CW segments, and not have to deal with those
"lower class hams". Now it's a little different. There just might be a
bunch of guys running 5 WPM on the extra portion now, and that would
really bore you "elitists". What are you going to do then? Will you
welcome them and try to help them build speed? Or will you shun them,
since they didn't pass the 20 WPM test? If they manage to work their way
up to 20 WPM, will you still think that they are not "real" hams?

Dave

I do the same thing. I repair radios quite regularly for the "theory challenged" extra class and other hams. I find it shocking that these guys have such little grasp of RF theory, yet have the cajones to put down otherwise technically capable people simply because they haven't mastered an obsolete skill.

Not really. He has, at least, momentarily enslaved you. A guy with
a knife told me to get out of my S10 one night in a skating rink
parking lot. I got out with a 9mm in my hand. You think I should
have just given him my truck?

This is probably true, but coupled with all of the public service we are
not doing and all of the help to the neighbor communication we shun
because we piss them off with our TVI, we should be able to impress
someone that a trained? bunch of nerds are necessary for the public
survival. Go any better survival plan?

41. my 2c on license restructuring

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-01 00:00:00 UTC
From: sean hall <shnews@pressroom.com>
Message-ID: <s6tloedl5k2143@corp.supernews.com>
Source record: 123569

i'm not so sure if the new, streamlined license structure will really help the hobby much. like many hams, i didn't really WANT to learn the code, either. but, once i got going, i found it fun, a badge of honor to know, and a real accomplishment to pass the 20 wpm test. CW may be an 'antique' way of communicating, but i think it's an important filter to keep uncommitted people out of the hobby. the ham radio manufacturers will no doubt be happy. but i have nightmares of people transitioning from nowhere...or worse, 11 meters, and clogging the ham bands even more. i'm sure i'm not the only one who feels that way.

42. Yaesu FT-50 on/off button

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-01 00:00:00 UTC
From: Bruce Barnes <bkbarnes@edisonmission.com>
Message-ID: <dNAb4.741$Ya1.70667@nntp1-sf.pbi.net>
Source record: 123570

The FT-50 has a clever on/off button. There is some coating on the "backside" of the button that closes a circuit on the system board, thus turning the radio on and off. Well, the magic stuff on the "guts" side of the switch has come off and i can't turn on the radio. Does anybody know what I can do short of ordering a new switch button?

Thanks,

43. Remember the beer game "Bob"

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-01 00:00:00 UTC

Anyone ever play the beer game "Bob" back in college? You know, you tuned in the Bob Newhart show and did a shot glass of beer every time someone in the show said "Bob".

Alas the show is long gone but the good times can still be had thanks to the Great Liberty Net, that's right they CAN serve a useful purpose and attract thousands of college aged kids to our wonderful hobby.

Rules of the Game:
First procure a 75m SSB reciever, then tune to 3950KHz on Saturday night.
A shot of beer is drank everytime you hear the word Government.
A shot of whiskey or your favorite liquor everytime you hear the word conspiracy.
An entire beer must be drunk between the first mention of Hollingsworth and the 5th time you hear his name else
you must drink a shot.

Original plans were to replace the word conspiracy with Y2K or communism however we feared alcohol poisoning could result.

My goodness gracious me!

I hadn't realized your were white! I'll have to re-evaluate all your past messages in light of this radical white perspective.

I am so-o-o visibly impressed!

While others struggle through college, the military and through jobs, all this is unnecessary because you're white.

I can understand why you advocate affirmative action for your and "your kind".

It's obvious to just anyone that you were born after your time. No one stepping off the sidewalk or getting out of your way because you're white. No one saying "sir" to you. No bowing and scrapping even though you've earned white (or, more likely in your case, inherited it).

Gee whiz, I bet you're even ashamed to wear your white dress and dunce cap in public (or are you above that this generation - maybe part of the Indemnity movement?).

I got this off one of my web pages; a page titled "White Trash":

When all you've got is your "race"; when you have no skills, no intelligence, nothing but the fact that you're "white".

When you play the "race card", you're the "joker".

Is it true that you're selling a replica of your "teener weiner"?

It's 2000, trash boy! For all that you're trying to convince people that it's 1984 with your Orwellian idea of "liberty".

Oh - I forgot - you're "pale". You don't have to think as do the humans who are white, black, red and yellow.

It's simply amazing that someone thinks he is anything at all just because of a melanin deficiency.

Is that why you're known as "VFP" (viciously foaming pervert)?

I sat back and took a deep breath...

All this bickering made me draw a sharp contrast to another favorite hobby of mine - RC airplanes. In all my days of flying RC, I've never come across such hostility from the "elders" toward newcomers as I have witnessed here. Quite on the contrary, most if not all realize the future of the hobby lies in the critical task of ensuring a healthy inrush of new blood into the fold.

The RC community struggled through many of the same problems and dilemmas faced by ARS today:

1. Dwindling interest from young folks. (vs. video games, internet, sports, etc.)
2. Crowded flying fields
3. Interference from many sources (pagers, cell phones, other RCers, etc.)
4. Relatively high startup cost
5. Danger of losing frequency allocation
6. Lost art of scratch-building airplanes (vs. the ever more popular Almost Ready to Fly kits)

I have yet to hear one RC old-timer bitch at newcomers for crowding the flying fields, or not assembling an airplane from balsa sticks, or not being interested in one particular type of RC flying. I have tremendous respect for the many RC mentors who gave up whole Sundays of flying their own planes just to teach me all I'm willing to learn.

None of the RC "old pros" care one iota about being pinned any badge of distinction. They are there on Sundays to have fun. Afterall, it is just a hobby. Having fun, to most of them, include teaching youngsters and helping RC-idiot adults, not ridiculing the uninitiated. They never demanded respect; the respect came heartfelt from those they helped. Most new flyers I've known hold much higher regard for those who helped them than for the club ace acrobatic flying hotshot.

As a result, RC is prospering, even through constant evolution. The popularity has ensured that equipment costs stay low. The solidarity has successfully defended and even expanded the RC bandwidth against several FCC considerations (read threats from commercial interests).

Back to Ham Radio. The ARRL Introduction books and study guides I've come across always portrayed this same type of healthy family atmosphere. Sadly, such is not the case if one is to believe the in-fighting that goes on here and on the airwaves.

I, as a newbie, was awestruck by the "warm reception" afforded me here in these Newsgroup discussions following the FCC announcement. I got rather emotional and lashed back at those who view me more as a threat than a fellow enthusiast. I hereby apologize to those I have offended and for the bandwidth waste I've caused.

I will argue no more. My wife and I both have 5wpm and written exams for which to study. However trivial these tasks may be regarded by some, they have been set forth as the new official rules, and we intend to abide by and make the most of them.

Best Regards,
Lingo Chang

This FCC action on restructuring kinda proves my point. ANYONE can petition for the FCC to change the rules. Quite a few people have been wanting the code removed and have submitted their wants and desires to the FCC. When the FCC issued the NPRM (Notice of Proposed Rule Making) a couple of years ago, the ARRL was caught in their own egotistical concept of what the hams wanted for rules and tried to stop the no-code tide with lots of counter proposals that required higher speeds of code for the upper classes. Thereby using the code as a discriminator. They did not justify using such a discriminator that offered no real advantage for the upper classes or for the service, so naturally the FCC rejected any such discriminator. Because of the international stuff, they had to have some code, so the opted for the 5 WPM, and the discriminator could be worked out with some technical test questions. I think the ARRL just screwed up in not cooking up some reason why code was a good thing for the service and more code separated the men from the boys.

I replied! And sent approx 5 pages worth explaining why we needed to maintain 13wpm and 20wpm code speeds. I sent a notice for proposed rulemaking about two years ago, calling for an expansion of the 80m extra sub-band down 25khz. When the FCC turned me down, they sent a notice about the licence restructering. I felt I had to make a comment about it. But they didn't listen anyway. CW IS still used for weak signal work Especially for EME, 160, 80, 6m 2m and so on. Also probagation beacons are used extensively on 10m and 6m. I'm pretty active in these modes. And found cw superior to most modes when conducting weak signal work.

Why would amateur radio die off now? It is just that someone finally
realized that a higher CW speed meant nothing. If you wish to use it
you still can...

53. N0VFP'S YEAR 2000 MESSAGE

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-01 00:00:00 UTC
From: Lloyd Davies <n0vfp@bellsouth.net>
Message-ID: <_5tb4.13118$y11.153180@news4.mia>
Source record: 123581
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.shortwave

Hello and Greetings from the Better Amateur Radio Federation!

I hope this message finds everyone ok. Looks like we made it. I would wait till Monday, when the Stock Market opens.

I want to take a few minutes of your time to let you know of some new things the B.A.R.F/ARG/Stumpjumpers/Liberty Net plan to do for the year 2000.

"Liberty Net 2000" This will be an all-new Website.

I want to say to all White, Liberty minded folks that we can claim this next Millennium. For the prize is about to be won. We can fight back and re-claim everything that has been taken away from us. It's time we folks who live in the South claim back our states rights and raise a New Confederacy. We all need to pray for this next year. God is sick of the sins of this country. REPENT AMERIKA! God is about to judge this Nation!

I now want to address the Ham community. This new FCC rulemaking is a step in the right direction. For many years now, old gas-bag extra class hams have kept us no-coders from having to get on HF. We will use to our advantage.

We have great things planned for the Liberty Net this year. We will step-up our look-out for jammers and potential recruits. Look for a reversal in the David Castle case this year. Ol' Davy maybe listening to 3950 from Leavenworth!

> nothing of importance outside your chosen field of
> employment?

No, it means I pick and choose on what I spend my precious free time. I personally would not spend 100hrs handbuilding ham gear which does 1/1,000th the capability of a store-bought $700 radio is a big waste of time in this day and age. Yet I respect those who find such endeavor rewarding. To make tinkering a prime directive of HRS, however, is turning a blind eye to reality.

> Actually, it looks like the price of good used ham gear

What is the point of having Amateur Radio if the entrance hurdle keeps
getting reduced further and further.

At this rate, it could become like FRS. Just buy the radio. How does that
jibe with the long and illustrious history that hams have had?

Probably not many. As I recall the process, in order to even get in the school
required a prelim 'aptitude' test. The navy just didn't pick people out of a hat
to get into radio school. If you got in at all, you had to prove motivation and talent
before they'd even consider you.

OK, Lloyd , now that the New Year's Truce is over I intend to let your ignorant ass have it with both barrels.

Number One: You'd better check your family tree carefully. You might find out that you aren;t nearly as "aryan" as you claim.

Number Two: America is spelled AMERICA not "AMERIKA". The name Davies is not German, therefore stop pretending you are.

Number Three: The Confederate States Of America ceased to exist on April 9, 1865. If you no longer want to be a citizen of the United States Of America, I suggest that you write to the Department of State in Washington DC and formally give up your citizenship. There NEVER EVER will be a "New Confederacy" , so wake up and DEAL WITH IT! Also the Third Reich ceased to exist on May 8,1945. Again, DEAL WITH IT!

Number Four: You and your non-Jewish brethren frequently quote the Old Testament portion of the Bible as well as Jesus Christ. May I remind you that the Old Testament was a Jewish document and Jesus Christ was a Jew. He was circumcised and accepted into membeship in the local synagogue. This makes you, being anti-Jewish, a first class hypocirite, since you worship a Jew.

Number Five: We of the normal rec.radio.shortwave newsgroup community are VERY SICK AND TIRED of your cross postings here. Get it through your thick skull, once and for all, that very FEW people on here agree with your beliefs. You have done nothing but antaginize and anger people on this newsgroup. Maybe good tactics in a so-called race war, which you appear to be intent on fomenting, but it is never a good way to win friends and influence people.

By the way, I am white American (scandiavian, by ancestry) and I don't agree with you
SO THERE, DEAL WITH IT !

Therefore, I sincerely request that you find an appropriate newsgroup to post to. I am quite sure that there are un-Ametican white suprecmicist HATE groups on USENET that would love to have you.

The purpose of Amateur Radio mention at the beginning of the FCC Rules Part 97 is not and never has been the same as the purpose of BARF.
Therefore, as a licensed Amateur Radio Operator (KB6VPI) I must ask you to cease and desist using ham radio for anti- American political puprses at once!

If you haven't yet gotten the import of this message, then may I make it simple for you, in words that even you can understand:

GET LOST, BOY!!!!!!!!!!

76. SWR problem

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-01 00:00:00 UTC
From: Rafffy Shammay <shammay@bigpond.net.au>
Message-ID: <386E71C5.1CD88FB6@bigpond.net.au>
Source record: 123604
Cross-posted to: rec.ham-radio,rec.radio.amateur,rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc

I had one of those antennae.

I found that the gap between the first and second sections (the one that has a solid tube plastic-like insulator) seemed to get black with dust etc. Cleaning it brought the SWR back.

Also, when I had first assembled it, the factory drilled holes were *NOT* in the right position. Measure everything again, step by step.
It's a very good antenna so it's worth persisting.
I left mine down when, after a storm, the mounting brackets had worked their way loose and allowed the antenna to fall, thankfully not on the neighbours kids!

The antenna is designed to sway through about 60 degrees in high wind, and it puts a lot of stress on the mounting system

Best of luck

With the debate over CW speeds and now the FCC ruling there has
been a lot of name calling over this issue such as "Welfare Generals",
"CBplussers" and such comments such as"Dumbing Down" and "Lowering of
standards".
I'm going to break this down and correct this with truth.
First, what is Welfare? Welfare is the taking of something such as
money from some who earned it and giving it to someone who did not
earn it. In order to be a welfare general that ham would have to take
the CW skill from another ham, download the skill into his brain and
Bingo, that welfare general knows the code. But we all know that is
inpossible. Even a ham that only has to learn the code a 5wpm still
must learn the code on his/her own. That general still has to work for
it, just not as hard. It's the same as if one ham bought a HF rig for
$1200 and 3 months later the price drops to $800 for the same radio
and another ham buys it at that price. Of course if I bought the rig
for $1200 I would be a little bugged but I let it pass knowing that's
life. Remember the ham who buys the rig for $800 worked less for it
then the ham who bought it for $1200. So maybe the correct term for
5wpm Generals would be Light Generals or General Lite.
CBplussers. Since when is Tech a CBer? there is a big difference
between the two and that is the tech has to earn a license and the

CBer does not require one. Also the behavior and language is much better on 2M and 70cm then on 11M.
The Dumbing down and Lowering of standards. Well this one in some ways I agree with. With just the lowering of the code for generals only would be more of a emphasis on modern communications technology then the code.Face it, times change and standards change over time. In 1912 Radio men had to know the code simply because it was the only mode available at the time. Even in WWII code was still required because it was the mode that worked when all other modes failed to get though. Today the code is not required in the Navy, Army, or the Coast Guard because new technology such as satellite and digital communications allow the military to communicate around the world any time they want. Today Morse Code is mostly used for recreation communications even though it's still use full in an emergency.
What the FCC did was a major overkill and a Stab in the Back to Amateur Extras. We all thought the extra class would be lowered to 12wpm not 5wpm. What the FCC did was erode the Extra Class so much it is not worth shooting for. I personally said the code rate should be:

Tech None
General 5wpm
Advance 13wpm
Extra 20wpm

The written test should be harder and the test questions not given out to the public to prevent memorizing and cheating.
The FCC not only dropped the code test for all classes but also did not make the written test any harder and the question pool is still available to the public. So maybe some hams are right that the testing for general and especially Extra Class has been Dumb Down.

73s Rick KC2ESD Future Full General or at worst a General Lite

Perhaps you are ignorant. How does not knowing something effect one's
IQ. Having a high IQ does not grant one all knowledge.

If not knowing Morse code can dumb a person down, it must affect either
his IQ or knowledge. Just think how brilliant Einstein would have been
if only he had known Morse code.

OTOH, it seems logical to me that dropping the Morse code requirement
to 5wpm will have absolutely no effect on anybody's IQ or knowledge,
i.e. no dumbing down is possible because of it.

What illustrious history? A bunch of old farts talking mumbo jumbo about
their ailments and 5X9 and Q something something etc., etc.
Hardly qualfies as illustrious. When was the last time an amateur advanced
the electronic state of the art through amateur radio? I do believe it was
Art Collins back in the 50s perfecting SSB. For the most part from what I
can tell all the exaulted old timers do is open the Kenwood, Icom or Yeasu
box and start talking. Illustrious history my foot.

Come hear the stories about enforcement and license restructuring from the horses mouths at the Richmond Virginia Frostfest on January 16th in Richmond, Virginia at the Showplace. Visit http://frostfest.rats.net for more details.

This will be your first chance following the report and order to hear from an ARRL official and from an FCC official in person following the license restructuring and also to hear about enforcement efforts.

Scheduled to be at Frostfest 2000 to present forums are:

9 am - Open

10am - Open

11am - MARS - Everett Worrell, W4WJJ

Noon - FCC - Riley "The Enforcer" Hollingsworth, K4ZDH

1pm - ARRL - John Kanode, N4MM, Roanoke Division Director
Dennis Bodkin, W4PWF, Assistant Division Director

2pm - ARES/RACES - Frank Mackey, K4EC, Virginia Section Emergency Coordinator
Tony Amato, KR4UQ, Deputy Virginia Section Emergency Coordinator

Patrick Wilson
K4OW
Frostfest 2000 Forum Chairman

>1) Who said "broadcasts" of the type W1AW is doing are not legal? Not
>the FCC regs.

According to 46CFR97.3:
"(10) Broadcasting. Transmissions intended for reception by the general public, either direct or relayed."

Where this gets interesting is in determining "who" is "general public". I contend that simply calling "QST de ..." does not get you off the hook - that "all hams" is a pretty weak distinction from "general public".

As for the 5wpm practice, this surely is aimed at non-hams (except for the no-code techs, all hams have 5wpm under their belt already).

Not that I care either way, and I actually find the practice very helpful. I just think its a case of bending the rules to suit one's own agenda.

I'll try and not get emotional here now that I've had a couple days to
calm down.How is CW outdated? I just don't get what you mean by
that,especially when compared to AM,FM,and SSB in that order.
The first on the scene doesn't have to be the first to become
obsolete.
What modes do you think are not outdated?

Nope, not for a moment, Volfy. I've said it before, I have
never believed that it should be any harder than necessary
for anyone who wanted to, to become a ham.

I am officially on record as willing expose a large part of
the amateur spectrum to the forces of nonsense in order to
support that ideal. But not all of the ham radio spectrum,
as has just been done by FCC.
I sure hope your wife doesn't have problems tolerating
trash, since its almost a certainty we'll get a large
increase in that sort of thing within the ARS.

Talk to someone who taught code in the navy or somewhere and they will
tell you that ALL of their students made it to 20 WPM although some had
to take the 2 week course twice.
Many of the study materials are poor,like the ARRLs or W5YI,I used
these and was getting nowhere the got "Jerry Ziliaks high-speed code
course"and went to 23WPM before I knew what happened.
I must admit I sure hated it until I could actually follow a
conversation.
Many people are too lazy,too set in their ways or just don't want HF
PRIVLEGES very much.

There's an international treaty that makes that unfeasible at the moment.. 5 words per minute is the INTERNATIONAL minimum code speed for Amateur Radio below 30 Mhz. There are several nations who are looking to drop the code requirement altogether (the US is NOT one). The treaty is reviewed every few years and you may see the code requirements loosened further (eliminated), if and when the international requirement is dropped (...personally, I'd be suprised to see it dropped real soon... maybe 5-6 years away)

THE sadness is that the "Arrons" of our world would GLADLY sacrifice their wives (as well as YOURS AND MINE in the form of legislation that eliminates OUR abilities to resist as well!) and daughters - if that was the price to be paid to save their cowardly, worthless hides! They would also not only allow the removal of their worldy goods at the first threat of violence against them - but would frantically offer to carry their stuff to the perpetrator's waiting car while their family was being raped.

I don't worry NEARLY as much about maurauders and predators (I can take care of THEM!), it's the "Arrons" that are a FAR greater danger to me and those like me by their misinformed and cowardly efforts to make ME that same powerless victim THEY demand to be!

Oh, no... another one wants the rules changed after they're in place....
You're about a year or two late on the issue. Where've you been... holed up
in your shack? The issue has been the subject of much discussion for over a
year now... it's a BIT late to make proposals NOW!

We all walk at different speeds; and some can't walk at all, so if one person wants to walk at 20 steps per minute and some only 5.They are both walking; does one add or subtract from the others ability?

The ones who can't walk have a place in the world too. They can do what they CAN do

It is not about technical skills---its not about the Me Mentality (I did it this way so all should do it this way). It is about change! The numbers of new hams have stagnated
to the point where the hobby is in jeopardy of losing band space (use it or lose it)

It is a shame that we can't be big enough to quit quarreling about trivial stuff and do
what's best for the hobby.

The above views are my own. It works for all aspects of life
Do what you can.

What I said was, the affidavit signatory was required to
state that he administered the code test. You said that he
instead called the other ham who "knew" that you could copy
the code, and clearly he would have signed the affidavit on
that basis, under your story (I know, you're sticking to
it). A violation that would have been acted upon by the FCC
at that time had it come to their attention. I'm sure they'd
have preferred not to know.
Counteraccusations do not produce accuracy, just more
attempts at muddy water.

>submission!

You already know the answer. All details of the QSO (callsign, date, time, frequency, and maybe even a tape of the QSO) would be forwarded to the FCC. They start an "Uh-oh" file on him, and as other complaints come in, they decide what action to take, if any. And yes, I'll let the offending operator know, via post, that he's in violation of his operating privileges and the data has been forwarded to the FCC. That's all I could do from my end. My conscience will be clear.

It's no different from witnessing a crime taking place; those law-abiding citizens who have a sense of right and wrong will notify the authorities; those who don't are cowards who use the excuses "I don't want to get involved," and "It's none of my business."

Which category do you fall in?

SO... tell me... where was the ARRL? Too busy running a publishing
house?

I'm sorry, I have not heard this issue discussed. You are somewhat
correct, I wasn't aware of what was happening though I was not 'holed
up' in the shack as you suggest but working in a 'holed up' shack
overseas.
Really now, how difficult is it to use the any of the blocks of the
three letter call prefixes available for the US instead of two (AAA-ALZ,
KAA-KZZ, NAA-NZZ or WAA-WZZ)---that's a simply administrative duty for
the FCC to implement---what, their computers can't handle it? No rule
changes required.

What an idiot. The first ham called the second ham to get him to sign off on the Morse code portion of the exam since he didn't have any way of sending 13wpm for an exam. The second ham had given me the Morse code exam six weeks before using a 78rpm record. Do you really think I had forgotten Morse code in six weeks? Presentday certificates are good for a year.

Dick:

International call sign allocations for the US consists of the following
blocks: AAA-ALZ, KAA-KZZ, NAA-NZZ and WAA-WZZ with the addition of
```

number and letter suffixes as required. Like I wrote in my post, for those in the majority who may wish for it the new call sign blocks can consist of a three letter prefix with the conventional call sign for example; AAA2AD or ABD3FYT. This capability has been in the system for decades---almost one hundered years. I'm surprised that as a ham for the duration you stated you didn't know this basic fact. BTW, your 'N' call is not old---it is new! My 'WB' call predates that by a goodly margin---similarly, an orginal holder of a 'K' call predates mine. Unfortunately, that was in the good old days before the FCC in their wisdom destroyed yet another important facet in amateur radio---sense in call sign allocations. I thought then as I do now that there is a bit of comfort in knowing the relative age and experience of the operator at the other end of the communications circuit besides providing a sense of continuity between the past and present.

I think the idea of a three letter prefix quite applicable. The FCC recognized the holders of the First Class Radiotelephone by issuing a special certificate to them when the deleted that license class in favor of the General Radiotelephone Operators Certificate. I think a similar situation is warranted for hams; as a generalization, elder and more experienced hams can help the newer and a special call sign to help distinguish the two groups/generations is indeed a useful tool.

That fact that achievement is institutionalized is an important and useful fact of life; for you to destroy this fact speaks interestingly of your attitude---quite possibly of your behaviour as well. If anything, less structuring will just increase the likelyhood of ghettoizing the ham experience---YEA... HOW BOUT IT BREAKER BREAK 19 C'MON DUDY DANDY!

You are entitled to your choice... maybe you can get the first 0 call in the new block; NNN0BK for instance or maybe AAA0BK strikes your fancy.

Sincerely,

<< I noticed you did not comment on my statement about "dumbing down of America". Ok lets not blame Mr. Klinton....lets blame you and all you liberal idiots. Look Doc, we are on the same side in this radio thing. But when it comes to politics we are 180 degrees out of phase. Let's do what we have done in the past...agree to disagree. >>

<<Don't give me this crap about "liberal idiots." Liberal means expanding horizons, not narrowmindedness-that's idiotic? That's futurisitc and thoughful. Narrowmindedness is akin to suppression and that's not what America's about. And besides, who'll be your man in 2000 fighting liberalism? McLain is a liberal Republican and so is G.W. Gore is more moderate than Clinton while Bradley is left of center but he won't get the nomination anyway. He's about as effervescent as a cadaver. There's too much made of labels in this country because in order for the government to work, there must be a synthesis of ideas. To explain; the liberals, let's say, represent the thesis. The Conservatives then become the antithesis and when they butt heads, out comes a synthesis, a networking of ideas. The "dumbing of America" is no individual party's fault but rather a nonstop progression of poor decision making. Ask some people why we're getting stupider and they'll say that since forced intergration came to being, instead of the blacks reaching for the white man's standard of education, the opposite happened. This might be considered rascist but nonetheless factual. Some will say that it came about because of COMPETITIVENESS of the races in reaching for dominance. Maybe? In my estimation it came about because of something called TENURE. Poor teachers are retained, are unable to be let go for ineptness providing they've taken up space in a school for four years. In other words, dummies with diplomas cannot be fired! And it has NOTHING to do with politics so let's scrap that theory. And furthermore, "dumbing down" is a ridiculous contradictory expression. Did you ever hear of "dumbing up?"

Remove diodes D-1 through D-12 on the main board. Also, cut all red wires.
That will give it "wideband" coverage and also boost the power to 100w.

Jeff

The League didn't poll me. Did they poll you?

If you tune across the HF bands, you'll hear just as many, if not
more, CW QSOs than phone QSOs. That's a fact of life.

Pray tell, oh genius from 'Bama, what happened to the dire predictions of your main man, David J.Schmuck..oops, I mean Smith? What happened to the invasion of America cities by foreign troops trained in the U.S.A? How about all those ready to flee from invading forces? Were your Alabama highways jammed pack with refugees and fugitives? Did the evangelical Rupture start in which your group began heading for the sky as Jesus descended? Did the graves of Christians worldwide open as those bones did the Watusi in light of Jesus's descent? Did Jewish bankers disrupt the world markets? You and those like you, the simps, must be in a state of shock. This morning your computers functioned and your toilets flushed. The food stores that were open still had plenty for all on the shelves. The government didn't poison our water supplies. All this nonstop bullcrap thrown at you which you not only believed but parrotted on this board has been proven to be exactly that and you must feel stupider than ever before although your ignorance is boundless. I stop to wonder just how many "believers" of David J.Smith and that idiotic Brother Stair and countless other shortwave leeches who have stolen bread from the gulllible will believe NOW? Survivalists? Bull! Christian zealots who profane the name of Jesus? Shame on you!. All of you have been shown up for what you are. NUT CASES, worthy of either institutions or jail or both. Every American owes a debt of gratitiude to the conscientiousness of our FBI working in conjunction with local law enforcement agencies as well as C.I.A. operatives who together were trailing every potential external and internal terrorist. Fellows, this country WORKS! Instead of finding fault with liberals and conservatives and everyone else in government, kneel down and kiss American soil. There's no sweeter tasting dirt in the entire world.

You mean the trash on 14.313MHz? Everyone there did 13wpm.

NOTE: I trimmed the newsgroups down in this response.

>The should have completely done away with CW and eliminated any requirement.
>It is an outdated mode of communication that is one step above smoke
>signals!!!

Smoke, like VHF+, is just good for local comms. Perfect for the Tech
licensee. OTOH, CW on HF will enable you to participate in world-wide
comms. And as far as being outdated, the CW portions of the HF bands
yesterday and last night were jammed. SKN, you know. (But then again,
40m CW is like that every night.)

Source record: 123666

Quit yer complaining, CRYBABIES! The world is changing. Get used to it. We just entered the 21st century, and Morse code is about as relevant today as buggy whips and smoke signals. The choice was to either lessen the Morse requirements or watch the flow of new HF licensees slow to a trickle and the bands be taken over by commercial interests. Fortunately, the FCC chose the former, rather than the latter. Watch for the FCC to move quickly to abolish the Morse requirement entirely, once the ITU requirement is removed.

That's the way it is. Deal with it. If you don't like it, turn in your licenses and get the hell off the bands so the rest of us can enjoy the hobby without the likes of you. Come to think of it, this would be the preferred action for you to take. This way, we could make ham radio an enjoyable hobby once again, without having to listen to your endless babbling about the weather, your health ailments, and how much better the hobby was "back when CW was required and I had to travel 400 miles through a raging snowstorm to the nearest FCC office to take my license test..." Blah, blah, blah. Nobody cares. Those of us who wish to modernize amateur radio so that it may continue into the next century have won the war. You lost. Get over it.

Either get with the program or get out of the way. We're sick of your whining.

Note: this address does not accept unsolicited e-mail. Please contain all discussion regarding USENET posts to the appropriate newsgroup thread.

HAMFEST/COMPUTERFEST CALENDAR 2000 - ILLINOIS
last updated December 24, 1999 |

o Please report additions or changes to Bob Parnass,
AJ9S, office phone: (630)979-5414, electronic mail:
parnass@bell-labs.com. Thanks to Dennis Dale, Rick D.
Wilson, Tom Harker, and ARRL for providing some of the
information.

JANUARY 2000

Jan 2 (Sun): Wheaton, IL - Giant Computer Show & Sale (see |
below). DuPage County Fairgrounds, County Farm Rd. & Man- |
chester Rd. 9:30 AM - 3 PM. Adults $6, children $2. |

Jan 9 (Sun): Orland Park, IL - Giant Computer Show & Sale |
(see below). Orland Park Civic Center, 147th St. & Lagrange |
Rd. 9:30 AM - 3 PM. Adults $6, children $2. |

Jan 23 (Sun): Grayslake, IL - Computer Country Expo (see |
below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Bel- |
videre Rd.) & Rt. 45. 4 miles west of I94. Admission $6, |
or $5 with discount coupon available at WebSite. |

Jan 23 (Sun): Cicero, IL - Wheaton Community Radio Amateurs
Mid Winter Hamfest - 2000 at the Chicago Motor Speedway.
3301 S. Laramie, Cicero. Located between Central and
Cicero, between the Ike and the Stevenson. Tickets $5.00 in
advance with 4 stubs. Free parking. Talk in on 145.39 (- |
.600) 107.2 or 103.4 Hz PL and 444.475 (+5.0) 114.8 Hz PL.
Info: www.w9ccu.org or send email to hamfest2k@hotmail.com.

Jan 23 (Sun): Glen Ellyn, IL - Computer Central Show (see |
below). College of Dupage. Corner of Park Blvd. & College |
Rd. 9:30 AM - 3 PM. Admission $6, children $2.

Jan 30 (Sun): Orland Park, IL - Giant Computer Show & Sale |
(see below). Orland Park Civic Center, 147th St. & Lagrange |
Rd. 9:30 AM - 3 PM. Adults $6, children $2. |

FEBRUARY 2000 |

Feb 26 (Sat): Grayslake, IL - Computer Country Expo (see |
below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Bel- |
videre Rd.) & Rt. 45. 4 miles west of I94. Admission $6, |

or $5 with discount coupon available at WebSite. |

Feb 27 (Sun): Glen Ellyn, IL - Computer Central Show (see |
below). College of Dupage. Corner of Park Blvd. & College |
Rd. 9:30 AM - 3 PM. Admission $6, children $2. |

MARCH 2000

March 19 (Sun): Sterling, IL - Sterling-Rock Falls ARS.
info: Lloyd Sherman, KB9APW, PO Box 521, Sterling, IL
61081-0521. tel. 815-336-2434, E-mail: lsherman@essexl.com

Mar 25 (Sat): Grayslake, IL - Computer Country Expo (see |
below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Bel- |
videre Rd.) & Rt. 45. 4 miles west of I94. Admission $6, |
or $5 with discount coupon available at WebSite. |

March 26 (Sun): Grayslake, IL - Lake County Fairgrounds.
North Shore Radio Club. http://www.ns9rc.org. ALL INDOOR,
Radio, Electronic and Computer Swapfest V.E. Testing 9AM to
Noon, Door Prize Drawing Every Hour, Admission $6 at the
gate / $5 in Advance. Door Open at 8 AM. Set-up at 6AM.
Free Parking. Cafeteria Open. Talk-in Simplex 146.52 &
NS9RC Repeater 147.345 +.600. For NS9RCfest Information
Call (847) 291-4160 until 10 PM. Info: Jacob Fishman,

Jim et al ...

It is pretty clear from a careful reading of the R&O that the ONE AND
ONLY reason given by the FCC for keeping ANY code test at all is
that we have a non-waiverable obligation under the ITU Radio Regulations
to have SOME code test for access to bands below 30 MHz.

Absent that, I don't think we'd have ANY code test in the R&O since
none is necessary except to satisfy an outdated treaty obligation which
will most likely be removed in a couple of years at the next WRC after
the upcoming one (it's on the agenda for that WRC).

THEN the FCC will be able to say, "Look, we've had a NCT for nearly
15 years and 5 wpm for full access to HF for a couple of years now and
the world hasn't fallen apart. There is no longer a treaty obligation,
which
was the ONLY reason for keeping even a 5 wpm code test these last
couple of years, so we hereby eliminate Element 1 (the code test) and all
references thereto in our Rules."

Until then, we've made tremendous progress.

73,

On the other hand...I have been an amateur advanced class op for about 15 years now...and I can for one say that this should give some of the young blood some incinitive to really get their licences and get on the air. I haven't really worked cw for years now, but I can forsee an upsurge in interest in the mode, since it will become somewhat an interest in those that no longer view upgrading to higher cw speeds to get on hf. As for me...I am going to get some study literature and try for my extra licence even though it won't have the prestige (anyone for an friendly argument here?) it once did.
The times they are a changin'.....

Er, pardon me ... I think you meant the "non-SSB/SSTV digital bands." I
am not interested in the code, but I expect to soon be doing some
interesting
digital stuff in what your erroneously refer to as "the code sub-bands."

It's called progress ... live with it.

5
> words per minute is the INTERNATIONAL minimum code speed for Amateur Radio
> below 30 Mhz.

Actually, the last part of that is untrue. The ITU Treaty/Radio Regulations
are
completely silent on any speed requirement. The FCC *could* have set a
1 word per fortnight code speed requirement and been perfectly within the
Radio Regulations/Treaty Requirement. But since 5 wpm was the lowest
existing code test speed and has already been accepted by CEPT for granting
US ops full HF privs in CEPT countries, they went with 5 wpm for now.

If you read the R&O carefully, the ITU Treaty/Radio Regulations are the
ONLY reason cited by the FCC for keeping ANY code test.

>There are several nations who are looking to drop the code
> requirement altogether (the US is NOT one). The treaty is reviewed every
> few years and you may see the code requirements loosened further
> (eliminated), if and when the international requirement is dropped
> (...personally, I'd be suprised to see it dropped real soon... maybe 5-6
> years away)

Consideration of S25.5 ... the section of the ITU Treaty/Radio Regulations
which required Morse tests (at no specified speed) for licenses granting
access to the bands below 30 MHz is on the agenda for the next after the
upcoming WRC. There is a great deal of international support for
eliminating
the Morse requirement from the treaty entirely and it is expected that it
will
be eliminated upon consideration at the WRC

Message-ID: <386E5AB4.B4C11DFC@dimensional.com>
Source record: 123679
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.cb,rec.radio.scanner,rec.radio.shortwave

Hey guys,

This rather worthless and futile thread is being cross-posted to the following groups:

rec.radio.amateur.antenna, rec.radio.amateur.equipment,
rec.radio.amateur.misc,
rec.radio.amateur.policy, rec.radio.cb, rec.radio.scanner,
rec.radio.shortwave

Could we possibly confine it to the policy and misc groups? All you have to do is edit the address list when you reply and delete the inappropriate groups. After awhile this crap should then disappear from antennas, equipment, etc.

Thanks and 73,

Marv
AB0IO

"We" are, huh? And everyone who holds a differing opinion is an "old
fart". You are just as I supposed you to be.

> As far as I'm concerned, ham radio is much better off without guys that
> cannot accept people for who they are and not what class of license > that they hold.

Dave, there is no moral nor any legal requirement for me to accept
anyone for who they are or what they are. I never had any problem
accepting anyone because of amateur radio license class. I'm not, on
the other hand, obligated to like someone.

I sincerely hope that this FCC action causes a lot of old
> stuffed shirts to sell all their equipment and throw in the towel. More
> room for the rest of us, that truly want to see ham radio progress, and
> who don't have a close minded, bigoted, and predjudicial attitude.

Again, anyone who holds a differing opinion from yours is a stuffed
shirt who should leave amateur radio and leave room for "us"--those who
"don't have a close minded, bigoted and predjudicial (sic) attitude".
You are just as I supposed you to be.

Neither a license class nor a callsign will make you other than you are.

Strive to be mediocre!

David,

This thread is being SPAMed to rec.radio.swap (and many other newsgroups)--I redirected it to .misc and .policy. Since I saw it, I'll take a minute to respond. Note I do not subscribe to .policy or .misc--please CC me via email if you want a response.

As a contestor, I welcome all the new HF operators--more operators equal more QSOs and a higher score. I'm betting some will use CW in order to chase DX during CW contests. Pileups will certainly get worse--glad I have 275 confirmed!

It doesn't matter if you (or anyone else) likes it or not, the new rules will go into effect in April 2000. The FCC kept the 5 wpm Morse test to comply with an international treaty. Of course, I'm sure the treaty will change in the next few years and eventually the FCC may do away with the test. In the meantime, this solar cycle charges along towards its maximum next year. It's an 11-year cycle, so you can always catch the next one.

Quit your whining--go pass the simple 5 wpm Morse test (my 7 year old passed it on the first try) and 2 more written tests (which by your own admission will be very easy for you) and get on HF as an Extra. If you don't want to bother with the tests, stay a Technician. Don't worry, we'll be okay on that "lousy" 7 MHz either way.

I have seen "real hams" that don't know anything about radios and how they work. We a "real ham" that give signal reports on a 2M repeater. This same "real ham" can't understand why people can't hear him off the side of his beams. CW was originally meant as a means for communication between machines. They should have left it that way.

I won't be whining. The only reason I'm interesed in ham is for DX on HF. 5 wpm beats the heck out of 13 to get SSB QSOs.

Although I'm not one of those who think this restructuring proposal is the end of the world, I very much hope you're wrong about elimination of the 5 wpm requirement. Learning CW at 5 wpm just isn't that difficult, and having a large group of people who know it provides a number of advantages:

1. CW provides reliable communications under worse conditions than almost any other mode -- with the possible exception of some of the newer digital modes which also require more equipment than a simple transceiver and a key.

2. The equipment needed to operate CW is vastly simpler, cheaper, and more compact than the equipment needed for any other mode. If I were going on an extended hiking trip in a remote area, I could carry a 40 meter QRP transceiver and a dipole that would be extremely light and compact, and be pretty certain of being able to find somebody to answer a CQ almost 24 hours per day, 365 days per year. That isn't true of any other mode, and it won't be true of CW for all that many years after testing for CW proficiency is eliminated (if it is).

But those two points having been made, neither of these requires an ability to copy high-speed CW, and I have never understood why being able to copy CW at 20 wpm should have anything to do with being able to use the bottom 25 KHz of the PHONE sub-bands on 15, 20 and 75 meters.

If I had my "druthers," the restructuring would have looked much like it did, but the 20 wpm CW test would have been retained for the current Extra CW sub-bands. I hope I'm wrong, but I am afraid that when April 15 rolls around, there are going to be a lot of people like me who barely passed at 13 wpm but really aren't comfortable at more than about 10 wpm, who will be chasing DX on the bottom 25 KHz of the CW sub-bands, and who will foul things up for the really proficient CW operators.

I don't think the ability to operate high-speed CW has the importance that it once did, since most of the functions of that mode can be assumed by some of the digital modes, but I do think there should contine to be a place for really proficient CW operators, and I'm afraid that if they don't have some bandspace that they "own," the incentives for learning that skill will rapidly disappear.

"Advance amateur radio's state of the art" - of all the laughably outdated directives I was forced to memorize, this one takes the cake.

This may be true in the old, old days when the typical ham build his/her own rig out of cereral boxes and coat hangers. I hold a BS in Mechanical Engineering and a MS in Computer Science, and I just got my first ham ticket. My plan for advancing the state of the art involves stopping by Texas Towers and picking up a brand new Yaesu FT-847.

Wake up and smell the surface mount device, old timer.

Why??? 10meters is good enough, no cursing just good contacts and
it's legal! If you don't have a Ham license its a great time to get
one. from april 15 on the tests including CW will be a piece of cake.
Also I heard that the Microprocessor will not allow the rig to operate
below 28Mhz so don't ruin a great radio leave it as it is or add a
power amp if you wish.

Since you brought the wife into this:
It took a lot of persuasion on my part to convince my wife to learn 5wpm with me and try for her Novice ticket. She is studying diligently for the written exam with zero technical background. She barely passed her college graduation math requirement a couple of yrs ago. Her engineer husband helps out as much as possible, but she admits some sections are just way too difficult for her so she may have to memorize those questions.

We both welcome the FCC announcement with excitement, as it may potentially help ease her uphill battle.

Some of you might commend me for introducing another person into the Ham world. Others, as plainly evident in these discussion, will be openly scornful of my attempt to dillute your supposed exclusive elite ranks with a techno-idiot. Ask yourself, which side are you on?

Really, and just how does it do without being used by most
hams (according to the ARRL)

>

>testing for CW proficiency is eliminated (if it is).

Compat lightweight? not more than my stuff. Cheaper well maybe you got
one there, so we hams should be cheap IYO

As to your assertions that the CW will die out without
testing, well it is unsopprted. I hope it is true given the IMO overly
mystic station it has enjoyed in the ARS, something I think is bad for
the ARS, but even in my most optimistic (from my pov) veiw don't think
it will die out, or become all that rare, unless those that like and
support the mode sit on their backsides and do nothing to promote the
mode
>

>I don't think the ability to operate high-speed CW has the importance

Incentive based systems only work well when what is given is
seen as more valuble than what is required. Clearly even 5WPM morse
may not live up to that level given the tendcies of techs not to
become tech plus

And you believe the small booklet study guides prepares the potential driver better than the test method used by the FCC - that it covers all the information that the driver needs to operate a vehicle? Those people are driving a vehicle that has the potential to kill people.

However, my main point, Dick, is that the ham license test is not a final exam that proves your knowledge, it is an entrance exam into the world of hobby radio. You not supposed to know everything when you complete those tests - your supposed to learn about this hobby radio after you take the test.

That was the intent of the FCC when designing those tests, and those tests serve that purpose well.

Yet another fine example of the hams waiting for someone else to do their dirty work. This item isn't new and if 500,000 hams had written (if that many can write in complete sentences) the FCC, this would have been put to bed long ago. All of this bickering is the exact reason I no longer participate in amateur communications. 30 years of enjoyment, but no more. I said it before and I'll say it again, the hams are their own worst enemy.

Misinformed as usual, Dick. The code exam could be administered
by a general or higher and the written exam could be administered
by anyone who was at least 21 years old. The written exam could be
administered on a different date at a different location by a
different person. Please get your facts straight before accusing
someone of illegal actions.

The FCC wisely did not do away with CW. It still can be used on any
HF ham frequency. It is still a useful mode for a lot of hams. Why
do you want to take that away? Doesn't that make you just as bad
as someone who wants to force you to learn Morse code? What
is wrong with live and let live?

The FCC should have eliminated code entirely and made it an elective mode.
Code is as outdated as smoke signals!! They just don't get it!!

Why would you assume worse case? Since it is my silently-alarmed
home, it is very unlikely that a robber would get the drop on me.
Probability is 100:1 that I would have him in my sights before he
knew I was awake. And he would first be greeted by 140 lbs of dog.
Of course, if he's armed and I'm not, my dog is dead and, more than
likely, so am I. You people who want to arm criminals and disarm
law-abiding citizens make me sick.

After reading the multitude of post regarding this issue, this is my opinion of the whole affair.

There will be a top heavy number of Extra Class Operators. (Just took the test after a weeks worth of intermentant study and passed with an 80 %).

There will be a fight for 1x2, 2x4, 4x6 or what ever the "designer" call sign pattern is in vogue at the moment. Why you might ask? Because this is America and being one means you must possess the "look and feel" of having made it in life. If this was not the case then vehicle leasing programs so the average Joe or Jill could buy an overpriced SUV or luxary car would unnnecessary.

There will be eventually restructuring of band assignments, and CW, Digital and other forms of non-voice communications will be squeezed into very small bandwidth. Maybe CW will die off, which will make the dye-in-the-wool anti-CW supports very happy.

One CB-derived person commented on other Hams picked on him and his kind for being bad operators therefore not welcomed into Ham Radio ranks. All I know is 2 meters and 7.258 MHz which in the 1970s sounded ham oriented now sound similar to the "trucker only" outband channels on CB. Especially 7.258 MHz during the day, I tried using MIDCARS this summer for the first time on a mobile. I was not welcomed during the afternoon because of not driving an 18 wheeler, sure they are a few old timers on MIDCARS from my youthful days in the 70's but these guys are a minority now.

The bottom line is this Ham radio will grow but, the technical experts are not going to come in droves. Computers not Radio are what the technical experts crave these days and you take no tests (other than for you BSxxin college). Remember money talks and BS walks axiom. The logic behind this statement, as supported by both the FCC and ARRL, is flawed. Ham Radio is a consumer oriented hobby bottom line, just visit your neighborhood Ham store. There is very little "home brew" rigs for sale, and I do not mean kit built homebrew either.

Lets face it everyone involved in this decision has a hidden agenda or financially motivated goal. The facts to support the changes were created to meet the situation at hand. The die is cast and we are about to go into production, so hop on the bus and go for the ride. What is certain is things (or is it thangs) are are going to change.

Howdy:

I am very concerned that I haven't heard or read of any discussion regarding call sign formats for amateurs licensed after RESTRUCTURING.

I propose something like a three letter prefix followed by a number group----for instance, KOP followed by the last four digits of their social security number or zip code perhaps.

Seriously, this historic change to amateur licensing should not ignore a subsequent change to appear in manner of call sign issuance. I sincerely feel that those amateurs who made it the hard/old/traditional... way should enjoy that fact---at least for the duration of their amateur career, by having their call sign identifier separate from those of future amateurs for the sake of tradition. Honestly, I think a conventional call sign with a three letter prefix would serve this function nicely.

Sincerely,

I'll add my 2 cents on this. I know a technician who took 2 weeks to get
13
WPM and got his general. I also know a technician who has been trying
to get 13 WPM for a year and could run circles around the general when
it comes to understanding the technical aspects of radio. My point is that
some people have no problems learning code while for others it may be a
difficult or almost impossible task.

It's like learning to play a musical instrument. Some people have the gift,
some do not. Code in no way determines who will or will not be a good
amateur operator. Code probably prevents people who would otherwise make
an excellent operator from getting into the hobby or upgrading.

Well, let's look at our "fundamental purpose" (FCC words):

97.1 Basis and purpose.
The rules and regulations in this Part are designed to provide an amateur radio service having a fundamental purpose as expressed in the following principles:
(a) Recognition and enhancement of the value of the amateur service to the public as a voluntary noncommercial communication service, particularly with respect to providing emergency communications.
(b) Continuation and extension of the amateur's proven ability to contribute to the advancement of the radio art.
(c) Encouragement and improvement of the amateur service through rules which provide for advancing skills in both the communications and technical phases of the art.
(d) Expansion of the existing reservoir within the amateur radio service of trained operators, technicians, and electronics experts.
(e) Continuation and extension of the amateur's unique ability to enhance international goodwill.

And the print's not all that fine, Brian!

Jeff, It seems that none of the local HF nets moved to V/UHF, its really strange, I live in a major metropolitan area with hundreds of hams located within miles of each other and you can scan V/UHF and HF for local activity and not hear anything for hours except during drive time. It just seems that activity around here is minimal. I guess this was one of the reasons I sold off most of my gear earlier this year. I suppose I could try to start up a new net, but because I hear only two or three stations check-in into the multiple weekly 2m club nets around here I doubt if I would have any success, as a matter of fact during the last two years I operated I can remember 3 local HF nets that were started and ended within a short period of time due to a lack of interest. I used to check into these open nets but when it got down to the only stations checking in were one or two stations there's not much you can do.

Hopefully the new reg's will jump start some new interest and activity into the hobby, at least in this area. 73, Jim AB4D.

213. Welfare Generals? NOT!

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-01 00:00:00 UTC
From: Rickhit@worldnet.att.net
Message-ID: <386f5755.155787162@netnews.worldnet.att.net>
Source record: 123767

With the debate over CW speeds and now the FCC ruling there has
been a lot of name calling over this issue such as "Welfare Generals",
"CBplussers" and such comments such as"Dumbing Down" and "Lowering of
standards".
I'm going to break this down and correct this with truth.
First, what is Welfare? Welfare is the taking of something such as
money from some who earned it and giving it to someone who did not
earn it. In order to be a welfare general that ham would have to take
the CW skill from another ham, download the skill into his brain and
Bingo, that welfare general knows the code. But we all know that is
inpossible. Even a ham that only has to learn the code a 5wpm still
must learn the code on his/her own. That general still has to work for
it, just not as hard. It's the same as if one ham bought a HF rig for
$1200 and 3 months later the price drops to $800 for the same radio
and another ham buys it at that price. Of course if I bought the rig
for $1200 I would be a little bugged but I let it pass knowing that's
life. Remember the ham who buys the rig for $800 worked less for it
then the ham who bought it for $1200. So maybe the correct term for
5wpm Generals would be Light Generals or General Lite.
CBplussers. Since when is Tech a CBer? there is a big difference
between the two and that is the tech has to earn a license and the
CBer does not require one. Also the behavior and language is much
better on 2M and 70cm then on 11M.
The Dumbing down and Lowering of standards. Well this one in some
ways I agree with. With just the lowering of the code for generals
only would be more of a emphasis on modern communications technology
then the code.Face it, times change and standards change over time. In
1912 Radio men had to know the code simply because it was the only
mode available at the time. Even in WWII code was still required
because it was the mode that worked when all other modes failed to get
though. Today the code is not required in the Navy, Army, or the Coast
Guard because new technology such as satellite and digital
communications allow the military to communicate around the world any
time they want. Today Morse Code is mostly used for recreation
communications even though it's still use full in an emergency.
What the FCC did was a major overkill and a Stab in the Back to
Amateur Extras. We all thought the extra class would be lowered to
12wpm not 5wpm. What the FCC did was erode the Extra Class so much it
is not worth shooting for. I personally said the code rate should be:

Tech None
General 5wpm
Advance 13wpm
Extra 20wpm

The written test should be harder and the test questions not given
out to the public to prevent memorizing and cheating.
The FCC not only dropped the code test for all classes but also did
not make the written test any harder and the question pool is still
available to the public. So maybe some hams are right that the testing
for general and especially Extra Class has been Dumb Down.

73s Rick KC2ESD Future Full General or at worst a General Lite

bowenb@best.com (William H. Bowen)
shared these priceless pearls of wisdom:

-> The FCC cannot eliminate the Morse Code requirement below 30 mHz -
->this provision is part of international radio law.

Well, since 30 mHz (30 millihertz) is well below the experimental band limit, and no license is required down that low, I suspect that your comment isn't valid.

Nor is it valid below 30 MHz., which is what I suspect you meant. We've been down this road so many times that I really don't want to argue the point. The FCC can exempt themselves from this requirement at any time they choose. They choose not to so at this time so as not to start an international catfight. The end will come at the next WARC, so why not just bide your time and roll with it.

The FCC *could* have, with the concurrance of the State Department,
which would have been unlikely, IMHO, "taken an exception" to the
provisions of S25.5 of the ITU Radio Regulations (as Japan did years
ago, with no international outcry or repercussions).

I did not expect that that would happen and it didn't, but the stage
is set for a change in US policy to supporting the deletion of S25.5
at the WRC follwing the upcoming one. (in a couple of years)

I fully expect that at that WRC, the nations of the world will retire
S25.5, eliminating the ONLY reason the FCC cited for keeping
ANY Morse testing at this time.

> <snip>

Folks,

I think that the reference has to do with the fact that Ramsey has been
pulling the tail of the Feds for a while by offering equipment kits that
are designed to support Pirate Radio applications (even though the "Free
Radio" community seems to disparage his efforts...). I believe that
that even in his catalog literature there was reference made to the
potential use of his broad-band 1-watt amplifier for augmenting FM-10,
FM-25 or FM-100 (domestic version) transmitters - (I can't find the
catalog around the house at the moment, so I can't quote page numbers).
The forementioned J-pole antenna appears to be designed for
(semi-covert?) beyond-Part 15 broadcast operations. The raid may
therefore have resulted from an accumulation of small provocations.

232. Help Identify "Jammer Joe" and "Doofus"

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-02 00:00:00 UTC
From: Kevin Alfred Strom <kevin.strom@innocent.com>
Message-ID: <386FAAFB.A9C95638@innocent.com>
Source record: 123286
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.misc,rec.radio.amateur.policy

There are three new items up at the 3950.net web site:

* Help Identify "Jammer Joe"

Recently, one of the unidentified jammers that plague the legitimate operators on 3950 revealed quite a bit about himself while under the influence of alcohol. Listen to his voice on a .wav file, and follow up on the leads to help us identify this illegal operator.

* W9ART Issues Death Threat

In one of the most obscene and malicious jamming incidents of his career, serial jammer W9ART openly calls for the murder of a fellow radio amateur on Christmas Eve. Listen to the .wav file, and help us bring this radio criminal to justice.

* Who Is "Doofus"?

Listen to new sound clips and get bearing and signal-strength information, and use these leads to help us determine the identity of long-time unid jammer "Doofus," who cruelly parodies a retarded person's voice during his jamming sessions.

It's all available now at 3950.net:

http://www.3950.net

With all good wishes,

Kevin, WB4AIO.

Here Here!! We need to all work to ensure that new entrants to our hobby are welcomed, and that they are socialized to the rules of courtesy and mutual respect which still characterize the vast overwhelming majority of QSOs. They won't act like CBers if the people who they want to talk to, namely us, do not do likewise. Our hobby is worth saving and nourishing. If we behave properly it will flourish. In my opinion this is the way to do it.

It is questionable whether the FCC listens to voters since none of the FCC employees are elected. Yes their budget comes from Congress but they are well down in the noise (and money) compared to some of the other players in the Federal budget. Amateur radio matters are even further down in the noise. The FCC's main concern is with commercial interests and major telecom issues.

And the FCC ignored and disagreed with much of what the ARRL proposed
and explicitily stated such in the recent restructuring document.

239. Vikie's ***W1WCR*** Confession @ Libnet board; Sid was RIGHT!

Taken from Libertynet board at
http://www.nationlink.com/liberty/messages/1214.html

It's Time I Told All Of You The Truth

[Follow Ups] [Post Followup] [Liberty Net Message Board]

Posted by Victor Misek W1WCR on January 02, 19100 at 01:33:21:

I know some of you are going to be really confused, and perhaps a little hurt by the following information, but I can't live a lie any longer. Despite the fact that I am well known as an advocate of conservative politics, I am in actuality a Gay Jewish man who has lived in fear of discovery for many years. I know that Liberty Net harbors many other individuals who have also grown tired of hiding their true feelings about other men and Judaism, and I suggest that they take this opportunity to "come out" as well. I know that a fair number of you have been sexually attracted to me in the past, and I ask you now to shed the tissue of lies that have kept us apart. If you're well hung, under 50, and willing to cut loose with an older father figure type with no sense of humor,please get in touch ASAP.

Thanks,

Your Vicky

Can someone tell me where 147.435 repeaters are located?

So far I know of the following:

Portland, Oregon
Sioux City, Iowa
Seattle, Washington
LA, California
San Francisco, California

Better get your head out of the sand and into century 21,
Bill. The FCC just effetively delivered the Amateur Radio
Service over the the CBers carte blanc, delivered on the
no-code platter. A little memorization and now even the most
illegtimate illiterate honyok is in, all the way to Novxtra
class.

Spencer: No surprise the FCC didn't respond, or listen to the wisdom of the thousands who filed comments. I have learned over the decades I've dealt with the FCC that when they claim to ask for comments, that whatever the comments are concerning is already a done deal. I doubt that they even bother to read any of them. I clearly remember the 220 MHz "band grab" several years back. 20,000 comments against, 2 comments for and both of them were from the corporations that proposed the grab in the first place. All wasted on the FCC, they took the frequencies anyway.

JC Penney is selling their GSX FRS handheld radios for $24.97 + 25% off right now. I picked up four for less than $80! They are pretty nice, 14 channels, 38 ctcss codes, LCD display, battery saver mode, uses 4 AAA batteries, etc., etc.

If you go into one of the department stores, they are sold near the Men's department. Not available through the catalogs.

Better clean that crystal ball you are using to predict my death. So
far, I am immortal.

You absolutely must remember the odds. If your odds of dying were
one a million, wouldn't you risk a fight? I suspect your odds of
dying in a car wreck are about that same figure. Some people are
willing to risk more than others. That's a personal choice. I
usually take the risk and I usually win.

same kind of problem here in Chico, the ARES members just love to check
in and out of the net, but when it comes to meetings or events, out of
at least 50 members, it is almost impossible to scare up 5 volunteers.
Most of them just want to sit home and play with their radio.

Actually, as stated by the FCC in the R&O (and supported
by any reasonable analysis of the comments), they DID
"listen to the wisdom of the thousands who filed comments."

That the body of comment did not support your desired outcome
(which was apparently in favor of more stagnation, from your tone)
does not negate the fact that the FCC *did* follow its own Rules
and *did* consider the comments which were filed.

You have to understand that the FCC is not bound to follow
a "popular opinion poll of the incumbents" but rather to act
in the public interest. (Though the body of comment does
support their action.)

> I have learned over the decades I've dealt
> with the FCC that when they claim to ask for comments, that whatever the

Baloney ... one of the reasons this Proceeding took so long is that
compared to most Proceedings, this one had an extraordinarily
large number of comments filed. You can tell from the prolific
footnotes in the R&O that they were all reviewed and considered.

> I clearly remember the 220 MHz "band grab"

If the amateur community (and the ARRL) had not been so
intransigent WRT a no-code license when the FCC
proposed it (before the loss of 220-222), we might not have
lost it.

As it turned out, UPS, the company which originally requested
the reallocation of 220-222 didn't end up getting it anyway.

Obviously your arguments didn't make sense to the FCC ...
they didn't buy all of the "Morse Myth" stuff ... in fact, the ONLY
reason cited by the FCC for keeping ANY Morse testing at
this time was the ITU Treaty obligation.

> > CW IS still used for weak signal work Especially for
> > EME, 160, 80, 6m 2m and so on. Also probagation beacons are used
> > extensively on 10m and 6m. I'm pretty active in these modes. And
> > found cw superior to most modes when conducting weak signal work.

NOTHING has changed in the Rules to prevent you from using CW
anywhere you could before ... all that's changed is that those who could
care less about Morse code are no longer going to be forced to pass
a high-speed Morse test to get phone and digital privileges ... something
that has been ridiculous for at least several decades.

The fact that some use CW (purely by personal choice and because
they happen to enjoy it, not from any real necessity) is not sufficient
justification for forcing all to become proficient at arbitrarily high
speeds.

The FCC made decisions which are in the best interest of ham
radio's future, even if you don't agree.

when you read the report and order you will see that the fcc carefully
chose a path through the comments that allowed them to justify what they
wanted. out of the 700 thousand or so hams in the US, there were only
2000 or so comments, about a percent or so, I guess they figured no-one
really cared.

Well Volfy....I certainly welcome your wife and any new amateur to the
hobby. I am one of those lowly no-coders that is looking forward to getting
my "something for nothing" upgrade, as some of the hierarchy have put it. Oh
well, if we stick together, we will at least have ourselves to talk to on HF
!!!!

73,

Chris

Listen to the RAIN REPORT! It seems Riley has sent a warning letter to a South Bend ham. I think Riley may have gotten the frequency wrong....UNLESS....W9ART has been following WA9KJI to 14.313 to harass along with Dave.

Next on the agenda: Showing Riley and the entire world that Lucinda Visser is as white as a lake effect snow squall blowing through South Bend, Indiana!!

Send him some 12 year old Wild Turkey and he'll tell you more. He might even get violent and smash his rig (problem solved). Only never believe anything that a drunk is saying when he's drunk, only 1/4 of what he says when he's hungover, and only about half of what he say's when sober.

Most of the people who are coming of age for HAM radio were not born in the 50's
and 60's.

I am 52 years old and until an accident laid me up for almost a year I had no interest
in ham radio or even CB. I chose ham radio because we all know the mess on CB. No
one who professes to like Ham radio wants to see it go the way of the CB. I am currently
a no code tech, but I will be taking my test for General before the 04-15-00 deadline. I
have had a hard time with the Morse code because of a hearing problem, but I will still try.

Change can be the most painful of experiences or it can a pleasant surprise. If Ham is
to survive then we all must be open to change. Those who are at the top of the Ham hierarchy who will soon be reduced to general are going to hate it.

I wonder if we will ever stop P+Moaning about what was and do what is needed to make sure our hobby flourishes. The choice is up to all of us

>teen and the rest were older.
>

So this 40 year old information has what to do with anything? This attitude is the problem. "Things were fine 40 years ago when I started so why change anything." The last time I joined a club a couple of years ago (are you listening McHenry County Wireless Association in Illinois) they took my money but never added me to the membership roles. I wasn't quite 50 at the time so I guess I didn't quite meet the minimum age which probably averaged 65.

And if we are lucky we will out number the fogies and have a lot more of us to talk to. Trouble is I don't have any ailments to talk about. Guess we will have to break HAM tradition and talk about something real like curent technology or something.

The reason 220 was lost is that nobody was using it. Doesn't matter how many letters were sent or what they said it didn't change the fact 220 was not being used. Now you need to wake up and realize if more new HAMS are not coined the rest of the bands will go the same as 220. The future can go one of two ways. Your attitude will guarantee the loss of all bands.

Shoot you aren't a real HAM. You never ran a spark gap station. That's my criteria for a real HAM. Burn your license. Your not worthy of working the 10 meter novice segment.

Exactly right. They responded exactly, or at least a whole lot closer to the MAJORITY of the REASONABLE responses. Those who simply wrote in against the proposal because "I had to learn the code so they have to also" wasted a stamp. In an NPRM comments must be based on actual facts and possibilities, not emotional noise. I think from reading the r and o, they responded very well to the well thought out comments and matched my suggestions almost down to the date of implementation. My only complaint was why not issue new upgrades to those who have already completed the requirements, but, hey, a small problem, the important part was dealt with just fine.

Some of the mumbo jumbo used by the old timers is every bit as bad as anything on CB. Why in the world do people say hi hi on voice. Why use Q codes originally devised as shorthand for CW on voice
etc., etc., To an outsider it sounds like the back ward of a mental institution. Listen to aviation traffic if you want to know what professional communications is all about.

The reason for the April 15, 2000 effective date is that all new
Rules must be published in the Federal Register and go through
some other bureaucratic mumbo-jumbo before they can take
effect.

The FCC could not have made the new Rules effective
immediately, so they cannot allow upgrades under the
new Rules because they aren't yet "the Rules."

Frustrating, agreed, but simple facts of life.

> > Carl R. Stevenson - wa6vse
>
> If they don't?

I'm betting they will ... if they don't, the US can either decide to
"take an exception" or stick with 5 wpm for G/E until they do.

But I'm betting S25.5 is history after that WRC.

With respect to my predictive powers ... bear in mind that I bet
Ed Hare of the ARRL a lobster dinnner, loser drives, that we'd
get T/G/E and 0/5/5 and won. (Ed's bet was for 4 classes and
some 12 wpm code requirements.) Ed has graciously accepted
defeat ... I wish others who didn't get exactly what they wanted
could be as gracious as Ed instead of proposing "poison pill"
"solutions" designed to damage ham ratio out of spite.

BTW ... while we're talking about Ed ... that brings the ARRL
to mind. While I didn't agree with their proposal, all of the
ARRL bashing which is going on now is out of line and uncalled for.

The ARRL tried to keep as many license classes and as much
code testing as they thought had a snowball's chance in hell of
making it past the FCC. They didn't get what they asked for,
but they tried.

The R&O, as it turns out, is almost exactly the NCI proposal
(T/G/E, 0/5/5) ... the only thing we (NCI) didn't get was the
"sunset clause, but that's not a really big deal.

So, die-hards, give the ARRL a break.

(I'll bet those who constantly accuse me of being an
"ARRL-basher" will be wide-eyed and open-jawed

when they read this :-)

Carl, Following your logic below, I contend that you are 50 years old and too
lazy to learn code beyond 5 wpm. Or, you are not intelligent enough to "copy
the code" in your head. Is this true?
I suppose I would give more credibility to a director of
"no code" international if he or she were a true, no doctor note,
extra class operator like me.

I contend that the CW element has kept many (not all) of the
low brain cell types off of the HF bands and hence keeps their
puke-brained jibberish off of the HF spectrum, where those
outside the USA might be subjected to it.

Just look at 2 meters -- most on there today dont know code,
and, are a laughing stock. They can't even speak properly
over a microphone. They basically sound like goof balls.

Sooner than I'd prefer (October 2000) :-)

> and too lazy to learn code beyond 5 wpm.

Not lazy, just not interested in jumping through irrelevant
hoops just for the pleasure of folks like you :-)

> Or, you are not intelligent enough to "copy
> the code" in your head. Is this true?

Back in my Novice and early Tech days (75/76),
there was a point where I operated quite a bit of
CW, working JAs, Johnston Island, and quite a
few countries ... I was probably about 4 states
short of QRP WAS on 40 CW if my memory
serves me correctly (I have the old log book buried
somewhere around here, but I'd have to look for it
to give and exact count.)

I found it tedious and boring and when I got involved
in VHF/UHF (repeaters, packet, satellite, DFing, etc.)
I rapidly lost interest in Morse code and stopped using
it. So what?

> I suppose I would give more credibility to a director of
> "no code" international if he or she were a true, no doctor note,
> extra class operator like me.

Ah ... so that's it ... "only 'REAL HAMS' (those who can beep
real fast) have intelligence, valid viewpoints, credibility, etc." huh???

Check my sig file for a smattering of credentials ... I've
been an RF engineer for over 28 years and have filed
about 20 good patent applications this past year, FWIW,
but enough of that ... I really don't have to impress you
and don't care if I do or not.

My sense of self-worth is not tied up in whether I can
beep fast or not and it's certainly not dependent on YOUR
opinion of me or my views.

> I contend that the CW element has kept many (not all) of the
> low brain cell types off of the HF bands and hence keeps their
> puke-brained jibberish off of the HF spectrum, where those
> outside the USA might be subjected to it.

The FCC disagrees ... they did in 1990 and they do now. Read
the Report and Order

(at http://www.nocode.org/articles)

... they even quote from the 1990 R&O to emphasize that Morse
proficiency has NOTHING to do with either technical proficiency
or behavior.

> Just look at 2 meters -- most on there today dont know code,
> and, are a laughing stock. They can't even speak properly
> over a microphone. They basically sound like goof balls.

With all due respect (which at this juncture doesn't amount to
much) ... sounds like the pot calling the kettle black to me.

Grow up and live with the changes. Try to do something
CONSTRUCTIVE to make ham radio better, instead
of carping about "Morse Myths" and other trash from
the past and trying to demean others who don't share your
interest in Morse code.

Well joe I guess you haven't spent much time on HF lately. Talk about low brain cell types talking puke-brained jibberish. Darn you have a way with words, now I know why you are an extra class. It really shows.

Might as well give up on your belief that Morse code skill is
worth something besides a tool for having fun. The FCC, the final
authority on such things, says it isn't. Sorry, you are going to
have to find another way to recruit worshipers. Carl will have
the same license as you before long, if he chooses to.

You used the words "done me in". That means *death* to most people...

>You absolutely must remember the odds. If your odds of dying were
>one a million, wouldn't you risk a fight?

Your odds are closer to 1:1. In an armed robbery where the perp has a gun to your head, you advocate dying rather than giving up the property because of your principles. Your reasoning? You said you're too old (at 61), live alone, and don't want to go to a nursing home. Those are suicide/death wish odds, and not for me...

Hello, I'm looking for an HF radio.... Something like a TS570DG, FT900CAT, IC736/746, etc. Can't afford the $1200 versions, but could pay a fair price, if you have anything in excellent non-mobile used condition, please email direct and I'll consider!
thanks,
Randy

I heard you on 10m ssb, and your raspy, over-driven
1500 watts on a band where 100 watts is plenty,
sounded pretty funny too. The part I really liked is
your "No kids, no lids, class A operators only......"
CQ. What an ass. Yeah, I really fell for the
"I gotta cold" excuse when the guy who responded
to your CQ mentioned your audio problem.

I currently hold a Technician Plus ticket. The way I understand the new license structure all I have to do is pass the General written test & after April 15th I will be able to get my General ticket. Right? Or am I missing something?

Thanks!

Aaron,

Actually, I'm using a home-built dual 6KD6 SSB rig with a home-brew dual 572B linear amplifier. The basic design is about 20 years old, and everything is done with tubes except for the two VFOs and the active preselector. I'm using old Yaesu SSB and CW filters (2.1 and 0.25 kHz, respectively). I admit that I'm using an MFJ 989C 3KW tuner/wattmeter, but it wasn't much more expensive than buying the parts... (roller inductor...etc). My first rig (built during my first incarnation as a ham in 1972) was a modified ARC-5 on 40m with two 1625s, and a few months later I built a 150 watt amplifier for it using three 807s and the parts from a couple of old TV sets.

Not that this kind of thing is for everyone, but for me, this was the essence of ham radio. I'd hate to think that the whole hobby is going towards "appliance operation". However, I'm also on packet and APRS (with commercial ICOM and Garmin gear, and I work a lot of local VHF/UHF with modern stuff - I'm no technophobe or Luddite!)

The world is changing, but it's nice if we can preserve some of the spirit of experimentalism that was associated with the early days of the hobby. There are many facets to this game, but this is the one I think is special.

303. K4DOH NEW YEAR MESSAGE

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-02 00:00:00 UTC
From: Unclaimed Mysteries <k4doh@mindspring.com>
Message-ID: <38702749.C11972DE@mindspring.com>
Source record: 123407

Hello and Greetings from the Unclaimed Temple of the True Sons of Yeti Dobbs, Resurrected.

I hope this message finds everyone in trembling awe of the task ahead. That is, to screw up ALL FOUR DIGITS when signing your checks until at least the middle of February.

I want to take up a few minutes of your time to let you know a little bit about the HORRENDOUS FATE that awaits unless you send $30 to the Church of the Subgenius, P. O.
Box 140306, Dallas Texas 75214. (http://www.subgenius.com/)

While many of you are celebrating the recent arrival of the Millennium, or anticipating the arrival of the New Improved Millennium in 2001, Sinister Alien Forces are even now planning the utter and complete takeover of
the planet. It would be bad enough if THEY were merely "not like us." If they were
even human. MY GOD IF THEY WERE EVEN BIPEDS!!! AAAAIIIEEE!!!

But I digress.

In this HAM RADIO group I've heard discussion about the rise and fall of the US South. The Confederacy, to be exact. Let me be clear in my position: The Confederate regime's major accomplishment was to convince millions of non-slaveholding Southerners that they should go die for someone else's right to own HUMANS AS PROPERTY. Haiyul, that's pathetic.

If you want to argue that slavery wasn't the reason for the Civil War, that's even more pathetic. Read the fscking state secession resolutions and the Confederate Constitution. It's in plain English.

Not that the Confederacy stopped there. They also tortured captured Negro Union soldiers and tried to RE-ENSLAVE them, a truly evil atrocity that would not be outdone for another 70 years or so.

I used to get pissed off when annoying, sanctimonious Northerners such as filmmaker Ken Burns would say that the Confederate regime helped inspire the more technologically advanced war crimes of the Nazis. And yes, I'm aware of Union atrocities at places such as Elmira, New York, where Confederate POWs suffered as much as those unfortunates in Andersonville. And yeahboy, do I know that the South has no monopoly on ignorance and racism.

But why do we in the South keep celebrating this decadent regime, with a cooked-up history and a legacy that has kept us LAGGING over a span of what - THREE different centuries? Spite? Maybe.

Memo to N-ZERO-VFP, Strom and other Confederate fetishists: You want some Southern inspiration, try learning about the Free State of Winston when an entire Alabama county refused to go along with the bloated, parasitic Confederate oligarchy and their plans to send others to die for THEIR slaves. How about those who supported Southern stations on the Underground Railroad? Now that took real courage.

And that's just the white folk! If you can stomach it, try some of the writings of Frederick Douglass, a far more complex and forward-thinking intellectual than Yankee history books teach.

Slowly but surely the South is leaving y'all behind. Hope you like leftovers.

You got a list? I wanna be on it.

Not true. I advocate getting the drop on one's armed criminal
opponent and/or disarming him. You remind me of the people who
had bumper stickers saying, "Better Red Than Dead", back during
the cold war.

I bought one of those transmitters brand new in the box in 1957 for $6. I also had the matching BC-455 receiver. I built a transformerless selenium rectifier supply to fit on the back porch where the dynamotor was supposed to go. It was somewhat dangerous as you had to keep track of the power line ground, but heck, it worked. I used it for the Novice band. Later when I got my mail order Tech license (1958), I used it with an International Crystal converter to cover 6 meters. I did a lot of tube gear homebrewing too, but that doesn't count to be called a techie now days, and it sure wasn't rocket science then either...

>However, I'm also on packet and APRS
>(with commercial ICOM and Garmin gear, and I work a lot of local VHF/UHF
>with modern stuff - I'm no technophobe or Luddite!)

It doesn't take an rocket scientist to use commercial equipment to run the digital modes. Sorry professor, you haven't convinced me yet...

Careful Dick, someone may notice how delusionary you are
and put you in a "rest home". If Carl so chooses, his
license will say "Amateur Extra" just like yours with
exactly the same privileges as you have. I can imagine
how that chaps your behind but might as well get used
to it. Time to bend your nose back into shape, do something
about your heartburn, and start having some fun with our
great hobby.

Has any one got the ADMS 1C Software or can point
me to where I can go to get it.
As I am trying to freeband my FT-50R rig.
I hope that this will help in fixing the rig for
freeband as I have tried every thing that I have
found with no luck.
Dose any one have up to date modification for the
FT-50R. As I am on my last leg with the ADMS
software.

Thanks

311. Re: An intelligent(?) set of questions about Pro-92,Pro-94, BC245, and trunktracking

Newsgroup: rec.radio.amateur.misc

Source record: 123431
Cross-posted to: rec.radio.scanner,rec.radio.amateur.misc,alt.radio.scanner,rec.radio.amateur.equipment

Hello!
I think my point may have been lost in my long original post. Many people replied (and I thank each of you) to let me know what scanner they have/enjoy/reccomend/etc. This is good to see but what I want to know is:

-Are the Pro-92's problems ONLY related to receiving Motorola trunked transmissions? Someone recently told me that my local trunked systems are all edacs so this point has become more important for me.

Essentially- if all I ever listen to are trunked edacs systems, will the pro-92 be as 'good' as a 94 or BC245? What about if I listen to (only) Edacs systems and conventional channels?

-Will the lack of a data skip be a serious concern? There are roving data bursts that I hear on *different* frequencies (when monitoring the trunked frequencies on my conventional scanner). Will the Pro-92 occationally stop and force me to listen to these non-voice bleeps and buzzes (*more than the 92 or 245 would*)? Or will it somehow recognize it as data and skip over it? Conversely, if I get a pro 94 or a BC245, will the data skip be robust enough to skip past these data transmissions? If the 94/245 data skip wont really protect me from these data "intrusions" then there's no reason to deprive myself of the advantages of the '92...

-Has anyone hacked the Pro-92 interface? I give some relevant information below...

-Is there a new updated version of the BC245? I read several posts indicating that there was a rumor about a 'fixed' version with less of a delay (less than the current 5 second delay) and more than 30 channels per system.

-P.S. where's the cheapest place to buy either a 92,94, or BC245 scanner? Everyone seems to have the same price at the same time, I'm wondering if there's a supplier anywhere that can undercut the "Standard Radio Shack, Scanners Unlimited, Scanner World, and Grove Price"

I've left my original post below for reference.
Thank you again to anyone who puts their two cents in.

In rec.radio.amateur.misc Spencer F. Ritchie <sfritchie@worldnet.att.net> wrote:

| I replied! And sent approx 5 pages worth explaining why we needed to
| maintain 13wpm and 20wpm code speeds. I sent a notice for proposed
| rulemaking about two years ago, calling for an expansion of the 80m extra
| sub-band down 25khz. When the FCC turned me down, they sent a notice about
| the licence restructering. I felt I had to make a comment about it. But they
| didn't listen anyway. CW IS still used for weak signal work Especially for
| EME, 160, 80, 6m 2m and so on. Also probagation beacons are used extensively
| on 10m and 6m. I'm pretty active in these modes. And found cw superior to
| most modes when conducting weak signal work.

Were you basing your argument for keeping 13wpm and 20wpm on the fact that CW is used for weak signal work? If so, I can see why they would ignore it. The fact that CW is essential for such work argues AGAINST it being a requirement for any license because the very fact that it is essential for the work means the license requirement simply isn't needed. If you want to do what just out of necessity needs CW, you will learn it (or do it all by computer). Can you say that if CW had not been a requirement to enter ham radio, that you would have never learned it on your own and ended up using some other mode in weak signal work despite the fact that CW is the better mode for it?

The FCC is charged with addressing the national interest. Amateur radio exists not because it's fun, but because there is a benefit to the national interest in having it. The requirements for licenses addresses the national interest as well (or at least they are supposed to). Developing a pool of skilled CW operators has in the past been of national interest. Since the military ceased depending on Morse Code, the nation interest need vanished. And that was many years ago. The FCC is just now getting around to cleaning things up.

| i'm not so sure if the new, streamlined license structure will really help
| the hobby much. like many hams, i didn't really WANT to learn the code,
| either. but, once i got going, i found it fun, a badge of honor to know,
| and a real accomplishment to pass the 20 wpm test. CW may be an 'antique'
| way of communicating, but i think it's an important filter to keep
| uncommitted people out of the hobby. the ham radio manufacturers will no
| doubt be happy. but i have nightmares of people transitioning from
| nowhere...or worse, 11 meters, and clogging the ham bands even more. i'm
| sure i'm not the only one who feels that way.

Why does the hobby need to be filtered? Explain to me (and the FCC) just how the national interest is served by ensuring that the only people who may be licensed are those who are forced to code.

As I see it, the national interest isn't served by requiring all hams to learn code, or to operate it at high speeds. Learning 5 wpm gives you just enough exposure to know how to do basic signalling in code if you were in a situation where other modes would not work. The military no longer passes traffic over CW. It's all computerized now. Soldiers in Bosnia and Kosovo were carrying laptops and were networked by radio via satellite. Maybe we should replace the CW exams entirely with a requirement for computer skills.

Eric Cooper wrote in message <386E6B16.10BB4055@home.com>...
OK, Lloyd , now that the New Year's Truce is over I intend to let your ignorant ass have it with both barrels.
Number One: You'd better check your family tree carefully. You might find out that you aren;t nearly as "aryan" as you claim.

Number Two: America is spelled AMERICA not "AMERIKA". The name Davies is not German, therefore stop pretending you are.

Number Three: The Confederate States Of America ceased to exist on April 9, 1865. If you no longer want to be a citizen of the United States Of America, I suggest that you write to the Department of State in Washington DC and formally give up your citizenship. There NEVER EVER will be a "New Confederacy" , so wake up and DEAL WITH IT! Also the Third Reich ceased to exist on May 8,1945. Again, DEAL WITH IT!

Number Four: You and your non-Jewish brethren frequently quote the Old Testament portion of the Bible as well as Jesus Christ. May I remind you that the Old Testament was a Jewish document and Jesus Christ was a Jew. He was circumcised and accepted into membeship in the local synagogue. This makes you, being anti-Jewish, a first class hypocirite, since you worship a Jew.

Number Five: We of the normal rec.radio.shortwave newsgroup community are VERY SICK AND TIRED of your cross postings here. Get it through your thick skull, once and for all, that very FEW people on here agree with your beliefs. You have done nothing but antaginize and anger people on this newsgroup. Maybe good tactics in a so-called race war, which you appear to be intent on fomenting, but it is never a good way to win friends and influence people.

By the way, I am white American (scandiavian, by ancestry) and I don't agree with you
SO THERE, DEAL WITH IT !

Therefore, I sincerely request that you find an appropriate newsgroup to post to. I am quite sure that there are un-Ametican white suprecmicist HATE groups on USENET that would love to have you.

The purpose of Amateur Radio mention at the beginning of the FCC Rules Part 97 is not and never has been the same as the purpose of BARF. Therefore, as a licensed Amateur Radio Operator (KB6VPI) I must ask you

to cease and desist using ham radio for anti- American political
puprses at once!

If you haven't yet gotten the import of this message, then may I make
it simple for you, in words that even you can understand:

GET LOST, BOY!!!!!!!!!!

Eric Cooper

Hello and Greetings from the Better Amateur Radio Federation!

I hope this message finds everyone ok. Looks like we made it. I would
wait till Monday, when the Stock Market opens.

I want to take a few minutes of your time to let you know of some new things
the B.A.R.F/ARG/Stumpjumpers/Liberty Net plan to do for the year 2000.

"Liberty Net 2000" This will be an all-new Website.

I want to say to all White, Liberty minded folks that we can claim this next
Millennium. For the prize is about to be won. We can fight back and
re-claim everything that has been taken away from us. It's time we folks
who live in the South claim back our states rights and raise a New
Confederacy. We all need to pray for this next year. God is sick of the
sins of this country. REPENT AMERIKA! God is about to judge this Nation!

I now want to address the Ham community. This new FCC rulemaking is a step
in the right direction. For many years now, old gas-bag extra class hams
have kept us no-coders from having to get on HF. We will use to our
advantage.

We have great things planned for the Liberty Net this year. We will step-up
our look-out for jammers and potential recruits. Look for a reversal in the
David Castle case this year. Ol' Davy maybe listening to 3950 from
Leavenworth!

<<Hate to break the news to you fool but I do not see this new millennium as belonging to the white folks. First of all, we whiteys are in a MINORITY worldwide, a BIG MINORITY. Do we therefore expect to catch up to the population explosion of men of color? Never happen. Secondly the USA is growing enormously in non white immigration and of course procreation. Add to this the population explosion among Negro Americans and we will be in danger of being crowded out, Lloyd. And so being that you're about 30 and should have a life expectancy of at least another 50 years, if you refuse to get along with non-whites in America, you will have a very unproductive life especially in the field of economics. Your rascist insanity will alienate customers and you will end up on welfare based on the taxes paid by the richer non-white class of Americans. Can you imagine that, racist Davies...you will become dependent on non-white for survival. Turnabout is fair play!

As usual, the picture you paint of the Liberty Net vis-a-vis the year 2000 is completely at variance with reality.

For many weeks, the NCS for the Net, W1WCR, has been drawing attention to the fact that the supposed Y2K "flashpoints" (such as the beginning of fiscal 2000 some months ago) had been passed without incident, and I myself said both here and on the Net that I believed if major problems occurred, they would be more psychological than technological.

One Liberty Net supporter was himself involved in reprogramming mainframe computers and other systems to ensure that potential disasters were averted. A lot of brainpower was applied to that effort, and it was almost entirely successful.

In addition, certain posters to this newsgroup sometimes arrogate to themselves the authority to speak for the Liberty Net.

No one should do that except W1WCR, who, as Net Control Station, can speak on all matters related to the running of the Net and who has his own website (http://homepages.go.com/~wikk3/hollings.htm).

On the political, social, and other matters discussed on the Net, even W1WCR can't "speak for the Net," since it's a forum with many stations with many different views participating.

There's no connection between the 14313 battles and the Liberty Net, except for the fact that some people from 14313 have checked in to or (unfortunately) interfered with the Net; there's no connection between the Better Amateur Radio Federation and the Net; there's no connection between N0VFP and the Net; and there's even no connection between me and the Net except for the fact that I check in occasionally and I enjoy the discussions and leading personalities there.

Happy last year of the 20th century,

Kevin, WB4AIO.

I still believe that emergency services are what hams
will be able to provide that the commercial world cannot and
will not. The local 911 system is very fragile, and highly
political too. Given any kind of problem, it would be gone
in a flash.

My wife, as a public health nurse, went down to Tarboro,
NC after Princeille flooded out. The state had NO way for
their employees to communicate back home except through

whatever commercial phone service they could get. The
nurses were not told where they were going, where they would
be staying, or even when they would come back. After they
got dropped off it was up to them to try to notify their
family where they were....if they could. As one person told
me, they don't know where they are going and when they get
there there are no communications.
Here is where ham radio could make a big difference, at
least in theory. Volunteers could emerge from their homes
with their transmitters and help out a lot in such
circumstances. Cell phones were useless for 1 week after
the flooding....overloaded and/or shut down. Only about 8
days after the disaster did AT&T bring in a large dish and
establish free phone service for the 2,300 living in a high
school gym with no cash or access to money. Then my wife
could phone home, but only for 3 minutes incidently.
However, locally I guess the hams are under contract to
provide for backup for 911, not to relieve suffering of
people who cannot found their spouses for 8 days after a
disaster, and had to assume they were dead while everyone
told them, "Maybe they are in another shelter."

Rick, you do rocketry? My 5 year old is chomping at the bit - I have 3 rocket kits on the shelf and a couple dozen motors. I keep telling him when he turns 6 we can do it together. A ham friend and I went to a high power event North of St Louis a couple of years ago - awsome. They were really happy when we helped locate a lost rocket using our handhelds for comm. They relied on hand signals. Sounds like they need to marry the two hobbies together. I don't think the FRS handies will do it as they sometimes have to travel a couple of miles.

I'm not sure who wrote it and I don't want to misquote.

Someone wrote:

> ...there is no moral nor any legal requirement for me to accept
> anyone for who they are or what they are...

In some instances there is a legal requirement
but probably more important is...

If you don't think there's a moral requirement to
accept people for who and what they are, then
you are really in a sad state of egocentricity.

Of all the hobbies I can picture, ham radio is,
more than any other, made up of different people
from different countries, walks of life, races,
creeds, colors etc.

Do you call CQ to only xtras? Or only xtras who learned
code the hard way? How about only to people of
your own religious group or race?

We DO have a moral obligation to accept others
for what they are, at least I do.

Next on the list, AM, followed by SSB and NBFM.

By 2100, any mode other than Quantum-modulated pulse modulation (QMPM).
Also, no knowledge of any mode other than QMPM should be tested, as being
archaic.

Is chopping off fingers related to ham radio? Is it a method of
communication? If so, you'll be doing short transmissions, and not for
very long.

Choping off a pinkey has about as much to do with communications as does CW.

Lumpy suggests:

I am impressed by a person's knowledge and skills, not by the
method they used to get there. Richard Petty is a much better
driver than I am, although we took the same driver license
test. Cecil knows a lot more about antennas than I do, although
we took the same ham test. There are plenty of no code techs
that can kick my butt in RF theory.

Even if some hams insist on feeling screwed by the FCC for
changing the requirements, I find it really rude for those
hams to blame the new, incoming hams and label them as
lids or idiots or worse.

The FCC and Congress care little for Amateurs as numbers or Voters...
Hell...At best, Amateurs represent a couple of hundred thousand voters...
very divided voters at that! ...NOT EVEN A DROP IN THE BUCKET in National
Elections!

Right now the FCC is dealing with years of budget cuts... therefore, right
now the FCC cares mostly about budgeting it's resources... Amateur
licensees contribute NOTHING towards FCC budgets. (for that matter...
neither does CB, but the FCC has no cost involved with CB other than
occasional enforcement as in the ham bands, where fines tend to pay for
costs incurred)

Racist Lloyd wants to own slaves. He thinks it makes him a man.
The South didn't have the infrastructure to needed to win in the Civil War. Lloyd's archaic 19th century mindset is quite unAmerican. Lloyd was born many years after the Confederate Staes of America ceased to exist. It's amazing, that here we are, in the 21st century and some people haven't learned a thing.

Now my experience in the Detroit area in the late 50's early 60's was totally different. The local 6 meter club had a number of hams who seemed eager to help someone in their teens get on the air. They gave technical assistance, sold equipment for whatever I could afford to pay, and even loaned stuff when there was no money available. On the air, I felt like I was always treated as an equal even though I was a teen and the rest were older.

You should be proud of your accomplishment(s). But I think
the 'badge of honor' should be a personal thing. Some people
go from zero to 20wpm in 6 weeks. Others may take years.
They can both be proud of the achievement.

How do we rate the achievements of two people shooting
basketball freethrows from half court -

One person is Michael Jordan.
One is a one armed man in a wheelchair.

Which achievement means more?

I'm impressed by both!

Welcoming all the new hams...Lumpy ab0gd

>

I think this guy is saying that the point of ham radio ISN'T the hurdles per se, but what they are supposed to represent -- knowledge about RF, communications protocols, band plans, and such. It is NOT supposed to be an exclusive club with long rituals requiring lots of effort but unfortunately that is what it has become (well, the club part anyway - and the previous hurdle of higher and higher code speeds for more voice privileges was just gratuitous, but served the desires of people trying to build an exclusive fraternal organization on a hobby whose reason for existance is based upon INCLUSION!).

And that is why it is under attack. And that is why the FCC revamped the licensing scheme to the minimalist one it is set up for: 5wpm test to satisfy the international treaties, and a bunch of multiple choice questions to do the rest. I would figure that it would have been better to have one pool of questions required to get the 50MHz+ certification, and another to get HF + the treaty junk (5wpm code). We went with 3 tiers, which is still a bit elitist, but hey, it is a move in the right direction.

Now, if there aren't increased numbers of hams, I would expect that more ham radio frequencies to be lost to commercial services - so people who are not welcoming of new hams, and try to be elitist about it and ignore, newbies are only hurting the hobby by this irrational behavior and indeed

threatening its existance!! If you want to have a club of old timers, elitist, requiring new members to do lots of rituals to become one of the gang, there are a lot of clubs and fraternal organizations out there whose very purpose is what you crave! I suggest you join them to get that aspect satisfied and then concentrate on making ham radio even more egalitarian and open than it is becoming! I'd love for ham radio to be in the position in 20 years of having the bands way overcrowded due to increased use (not loss of bands!) so we start experimenting with ultra-narrow band technologies to allow everyone to use the stuff!!

Yes, that is just what I was thinking. By having lots and lots of young Hams, losing lots of spectrum would be played as "the US destroying our technological wireless future" but with a small number of older hams and relatively few newbies, it gets played as a bunch of old folks complaining about losing an ill gotten benefit.

Right now, a lot of the interest is in the microwave bands - so I expect to lose most of that in the next 10-20 years unless we start using it, but with the damage we have done to the hobby by being so HF focussed (even to the point of requiring morse code at any level to get non-morse access for so long), even now, there is virtually no experimentation being done by average hams so no public benefit - and depopulated microwave spectrum - so that is gonna go pretty soon.

shared these priceless pearls of wisdom:

->In article <386D6602.DFE7AAE8@fgi.net>, Arthur Unwin <aunwin@fgi.net> wrote:
->>As for being a "real ham"
->>would you suggest that any engineer must work on an
->>assembly line until the task at hand can be done
->>without thought, automatic, before he be allowed to
->>have a P.E.licence i.e. to make him a 'real" engineer?

No, but of all the engineers I've met in this profession, the very best were those who at some point in their young careers did "assembly line" time in the service or manufacturing sectors of the business. Fix some engineering screwups for hours on end as a kid and you'd be surprised how those same errors DON'T get repeated when you are on the smooth end of the sliderule.

->
->No, but I would suggest that he know and be able to do mathematics
->without thought (or calculator) to make him a 'real' engineer. Math
->is the fundamental "mode" of all the sciences; it transcends language
->barriers -- any two engineers any where in the world can communicate
->their engineering ideas via math.

Respectfully disagree. Doing math without thought is the best way I know of to make really dumb errors; the calculator isn't so much a crutch as it is a tool, just like a voltmeter or a spectrum analyzer. If you don't know what you are doing, none of the three is going to help you be a "real" engineer.

As for your contention that "math" is the universal language of engineering, again I take exception. Math is a convenient way of expressing a creative idea so that others can manufacture your creation, but to say that I can express my thoughts to you in math without the idea being expressed is not correct. Teach me, for example, about manufacturing integrated circuits without being able to converse in prose. It is the creativity, the art if you will, that sets the engineer apart from the technician.

Now with all due respects to the wannabee engineers in the group, I'd like to hear from practicing engineers -- how many of you regularly use the calculus, the fourier transform math, or the differential equations (regular or partial) in your everyday work, that math that we sweated bullets over for four years in college? How many DON'T use anything past what we learned in junior year algebra in high school?

Just a poll, nothing scientific, just want to hear some thoughts.

359. NTSB reccomends restructuring driver's licences

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-02 00:00:00 UTC
From: don@kb9vek.ham
Message-ID: <gWMb4.55$83.128@news1.iquest.net>
Source record: 123479

December 30, 1999

The National Traffic Safety Board, after lengthy review and debate, has drafted a new structure for automobile driving licenses.

To promote more drivers and to encourage those who have not been able to pass the current driving test, the following changes have been recommended for adoption in the United States:

1. Electronic/illuminated traffic signals are no longer deemed necessary. The need for understanding red, green and yellow encoding of "stop", "go" and "caution" are to be replaced with the more modern and widely recognized english-language terms. Drivers will now only need to shout "stop" or "go" at other drivers as they approach intersections. "Caution" has been throw to the wind.

2. In recognition of the tendency for drivers today to run 13 to 20 miles per hour over the speed limit, it will be lowered to 5 mph everywhere. Anyone capable of at least walking that fast will be (by virtue of that accomplishment) granted a driver's license. This will ensure that everyone can obtain a driver's license and thus be minimally likely to prevent anyone from operating a motor vehicle at higher speeds if they so choose.

[snip] (remainder of boring legalese has been omitted)

IT'S A JOKE, GUYS. RELAX, I'M ONLY TRYING TO LIGHTEN THINGS UP A BIT!

> in a flash.

Obviously there are some well organized and efficient
ham groups that regularly assist pub service comms (OCRACES etc).

- not withstanding that -

I was the director of 911 comms in my area for several years.
The local hams approached us more than once, offering help
in simulated emergencies, drills etc.

Each time we'd all sit at the big round table, the arguement
was between the hams themselves. They couldn't seem to get
their own act together, much less interface with the
government comm systems people. Because of this, my
bosses (non hams) said 'no way'. They saw the hams
as just a bunch of argumentative, disorganized
kids.

Because of that, we spent millions of dollars on
our own 911 redundancy. We couldn't rely on the
hams, so we spent the tax dollars to do it ourselves.
I couldn't convince the administration otherwise.

Just thought some of you might like to know how
some gov agencies view hams.

Moral of the story? Define your roll BEFORE
you go to the bargaining table.

I'd say it's several steps above AM, which occupies twice as much bandwidth as SSB and requires considerably higher power than SSB. About 95% of my HF contacts have been SSB, with maybe 3% CW and 2% RTTY. I've made perhaps half a dozen FM contacts on 10 meters, but wouldn't know whether my rig really transmits AM.

FM and AM are fine where high audio quality is needed, such as for music, but for communicating on the HF bands, I can't see why anyone would use either of them.

>I would wait till Monday, when the Stock Market opens.

Yes, you do that. Wait till Monday. But I'm sure your portfolio will be just fine. Just remember this - "Never touch the principal". It works for the Rockefellers and the Rothschilds. I'm sure it will work for you.

>I want to say to all White, Liberty minded folks that we can claim this next Millennium.

Like "we" claimed the last one? Geez, unless "we" do better than "we" have done in the past, then "we" don't deserve much in the future. Just more of what "we" have brought on ourselves in the past.

>We can fight back and re-claim everything that has been taken away from us.

What exactly was taken away from "us"? And was "it" taken or did "we" give it away in a spirit of compromise?

>old gas-bag extra class hams have kept us no-coders from having to get on HF.

"Having to get on HF"? No indeed, you do NOT have to get on HF. As an "old gas bag" advanced class ham, it's perfectly alright with me if you don't get on HF. Ever. And maybe the 5 wpm code requirement will help you NOT get on HF.

>Look for a reversal in the David Castle case this year. Ol' Davy maybe listening to 3950 from Leavenworth!

Or not. With all due respect, I do not see you as one with insider information about FCC enforcement (or the lack thereof).

Now run along and find a nice long article by David J. Smith and post it here for all to enjoy.

It has been rumored that the UN troops plan to beat their black helicopters into plowshares this year. I wonder how "Pastor" Pete Peters and Linda Thompson and David J. Smith and Brother Stair will handle that one. :-)

Eric Cooper wrote in message <386E6B16.10BB4055@home.com>...
OK, Lloyd , now that the New Year's Truce is over I intend to let your ignorant ass have it with both barrels.
Number One: You'd better check your family tree carefully. You might find out that you aren;t nearly as "aryan" as you claim.

Number Two: America is spelled AMERICA not "AMERIKA". The name Davies is not German, therefore stop pretending you are.

Number Three: The Confederate States Of America ceased to exist on April 9, 1865. If you no longer want to be a citizen of the United States Of America, I suggest that you write to the Department of State in Washington DC and formally give up your citizenship. There NEVER EVER will be a "New Confederacy" , so wake up and DEAL WITH IT! Also the Third Reich ceased to exist on May 8,1945. Again, DEAL WITH IT!

Number Four: You and your non-Jewish brethren frequently quote the Old Testament portion of the Bible as well as Jesus Christ. May I remind you that the Old Testament was a Jewish document and Jesus Christ was a Jew. He was circumcised and accepted into membeship in the local synagogue. This makes you, being anti-Jewish, a first class hypocirite, since you worship a Jew.

Number Five: We of the normal rec.radio.shortwave newsgroup community are VERY SICK AND TIRED of your cross postings here. Get it through your thick skull, once and for all, that very FEW people on here agree with your beliefs. You have done nothing but antaginize and anger people on this newsgroup. Maybe good tactics in a so-called race war, which you appear to be intent on fomenting, but it is never a good way to win friends and influence people.

By the way, I am white American (scandiavian, by ancestry) and I don't agree with you
SO THERE, DEAL WITH IT !

Therefore, I sincerely request that you find an appropriate newsgroup to post to. I am quite sure that there are un-Ametican white suprecmicist HATE groups on USENET that would love to have you.

The purpose of Amateur Radio mention at the beginning of the FCC Rules Part 97 is not and never has been the same as the purpose of BARF. Therefore, as a licensed Amateur Radio Operator (KB6VPI) I must ask you to cease and desist using ham radio for anti- American political puprses at once!

If you haven't yet gotten the import of this message, then may I make it simple for you, in words that even you can understand:

GET LOST, BOY!!!!!!!!!!

Eric Cooper

> Where can we verify the latter part of your statement, Dick?

Can you think of any OTHER reason why they would have done
so?
Quick, get that super IQ to work and thinkup some catchy
answer.

Meanwhile the rest can read a report from a EA ham:

This is the experience from Spain. Here in EA-land
we had the CW reading tests optional for the HF bands during
the 80's and, as
those of you who were active on the bands by then could
testify, the spanish
phone ops were internationally regarded as "lids". The ranks
were flooded with
CBers looking for more room and their jargon has still firm
influence in the ham
phone language. Most of them bought expensive antennas and
japanese blackboxes
but got bored in a few years and are not active anymore.

Yeah, I know-all politics is local and in ham radio all
"evidence" is anectodal. "Proof" just doesn't exist, does
it? Unless, of course you want to query the Spanish
telecommunications authority to see why they would do such a
Luddite act as reinstituting mandatory Morse code tests for
their ham radio operators....

<<Yes, I agree that KV4FZ is still here and by being here, he proves day by day that in one breath the FCC is eager to clean the rats out of ham radio while in the other sabotages their own efforts. The longer Herbie stays the more brazen and rotten become hams like Polly, Lloyd, Tolassi and other festering zits. Herbie has made a joke out of DUE PROCESS which in his case is L..O..N..G O..V..E..R..D..U..E. But there's another side to the coin. KV4FZ has cleaned his act up all the way and so it gives me and others pause to reflect. Just what is being gained by forever taking away his chances to be on ham radio? I simply don't know. What I'm saying is that if during this long process he would have kept up his nastiness, then someone like I would be eager to see him dissolve but he's mellowed whether ostensibly or sincerely. We must take him at face value. Like him or hate him, he has PROVEN he wants to retain that ticket and credit must be given to his stubbornness and perseverance. In time it's a given that the FCC will indeed win out but I have to ask myself if it's mandatory that a guy who's done a 180 be removed? Maybe I myself have mellowed to the point of feeling sorry for the guy? I don't know exactly how to express my feelings and maybe it's because I myself was under FCC pressure as well as WB2OTK and Herbie. And something else enters my mind. Is it unreasonable to think had the FCC REALLY WANTED TO DISPOSE of KV4FZ for good, they COULDN'T have? Things don't jive in this story of Herbie versus the FCC. Things have calmed down on .313 including my and his vituperativeness. Perhaps leaving sleeping dogs lie might be the best approach?

: I hope this message finds everyone ok. Looks like we made it.

Lloyd, I too am glad we all made it. I'm also glad that the "one man army" did not have to single-handedly fight the New World Order UN Troops on Main St. of Athens, Alabama.

: I want to say to all White, Liberty minded folks that we can claim this next
: Millennium. For the prize is about to be won. We can fight back and
: re-claim everything that has been taken away from us. It's time we folks

Though I cringe at what possible "final solution" you've got in mind for non-whites, I'm at least glad to see a message from you that does not directly attact or insult, Jews, blacks, gays, 33rd Degree Masons, etc. (Suggestion: since you've already got Masons on your Hate list, and you're always in need of some new boogeyman to loathe, howzabout adding the Shriners? There's something downright Satanic about those goofy hats they wear in their so-called "parades".)

As a public service for the new readers of the rec.radio newsgroups, I'm reprinting your stunning message of December 20, 1999. It's a masterpiece of fear, ignorance and confusion, AND it is neither satire or parody, but a real declaration of extreme paranoia.

--Leigh Marrin/KM6JE.

Subject: Dear Newswatch Magazine Listeners/Readers:
Date: 12/20/1999
Author: Lloyd Davies <n0vfp@bellsouth.net>

The year 2000 is rapidly approaching. No one knows the complete ramifications of this computer problem except possibly the perpetrat-ors of the New World Order.

A woman who works for FEMA in Waco, Texas, told her doctor in confidence that FEMA and the Federal Government believed Y2K would be ten times worse than anyone has yet imagined.

Those working for world government, who hope to TRANSFORM the world into a Socialist form of government, have long thought the time would arrive at the year 2000. One method to facilitate the process was to get the world of economics on speculation. Get the economies of the world off the gold standard and onto paper money with NO precious metals backing the currency.

Through issuing more and more paper money, it would debauch the value of it - that's called inflation. At the right time in history, after getting the world entangled in speculation in the stockmarket, they would PULL THE PLUG and plunge the whole world into economic upheaval and disaster.

What better way would there be to create worldwide chaos than the Y2K computer crisis? It will certainly affect the financial institutions of the whole world; especially, the noncompliant systems corrupting the compliant systems through interfacing with each other. Even if the banks in the United States are ready for Y2K, they will still interface with foreign banks. Reports on progress for the world at large are very bleak when it comes to Europe and the Third and Fourth world countries.

Statements on television say that the entire United States power grid is compliant with the exception of possibly one percent, and that one percent will be ready. Certainly, we hope that is the case. However, when we KNOW of the thousands of lies released to the public by our Socialist controlled Federal Government, their statements are totally unreliable. To an unsuspecting, gullible public, their statements sound good; but to those who have discovered their plans for a one-world-government without WE, the peoples' consent, it becomes obvious they are lying to us.

To show the apathy of Texas State legislators, one representative was asked about the possible United Nations occupation of America and Texas in part-icular. His reply: It's a federal matter, don't bother me.

The Y2K crisis is to be the catalyst that allows President Bill Clinton to call a "national emergency" with the result- ant calling of Martial Law. With Military Law in force, ALL Constitutional guaran-tees and the Bill of Rights will be swept away. This crisis is exactly what has been planned since 1887 by the Socialists.

The 33rd degree Freemasons who have been hand picked to understand the "mysteries" of world government have a motto as to how they will achieve world government - out of chaos will come order. They are the ones - the Illuminati/High Freemasons - that have laid down long-range plans to fulfill their "master's" will - Satan the devil.

Anyone would have to be deft, dumb and blind OR an agenda working for world government that would deny there is a CONSPIRACY at work to overthrow every nation on earth. IT IS CALLED COMMUNISM! It is an historical fact that Communism has gobbled up 40% of the land territory on earth. NOT ONE COUNTRY HAS COME OUT FROM THE IRON GRIP OF COMMUNISM, even though the mass news media has led millions to believe those people are now free and Communism is dead.

V. I. Lenin, first butcher of Communism said: "First, we will take Eastern Europe, then the masses of Asia, then we will surround the United States, and it will fall like a ripe fruit into our hands." Has

the United States been surrounded, even infiltrated from within, to help prepare for the fall?

All evidence says YES! The United States is the targeted nation - that's why we make treaties and KEEP them in spite of the Communist world's violation of them. The COUNT DOWN IS NEAR ZERO AMERIKA!!!

Sincerely,

David J. Smith

>

So what makes you think this restructuring saves a single
hz of ham radio spectrum? When the commercial demand rises
to a certain level, any ham radio UHF/VHF/SHF spectrum not
committed to ham radio via international treaty WILL be
withdrawn and refarmed. Bet on it. And even that allotted to
hams under international treaty can be reallocated if need
is such that FCC decided to take an exception to the treaty

So if you believe that this change solves anything, time to
rethink the whole situation. No realistically conceivable
added numbers of new hams will help.

What exactly has been taken away from you ?

> For many years now, old gas-bag extra >class hams have kept us no-coders from
>having to get on HF. We will use to our >advantage.?????

Lloyd, I want you to read your statement and explain it to the group because it appears that you must of been distracted, or you didn't get that much needed grammer book for christmas.

I read your statement and the way it looks to me is that you are saying that because there are extra class hams all the no-code hams didn't have to get on HF????? and the last sentence of your paragraph make no sense????

Lloyd, you post messages to the group and you know the group is going to respond. You could at least bring your grammer up to the sixth grade level and make your point of view clear.

>I want to say to all White, Liberty minded folks that we can claim this next
>Millennium. For the prize is about to be won.
>
What prize, the last time I drove through the south (Alabama, Mississippi, and Louisiana) it looked pretty poor, if the south is the big prize you can have my share.

That was then. This is now. The new, improved criminal is
much more likely to be an addict who has absolutely no
regard for anything except financing his next fix. Your life
is meaningless to him.

Clearly she shouldn't have done that but sometimes people
do things instinctively without taking time to think about
all the posibilities. I've known state troopers to go out
the same way.

The CBers weren't interested in the 5wpm before and I doubt they will
be now. Same with the no-code Techs. A few Tech Plus operators
will upgrade, but will be ostracized by the old hams and head back to
the novice segment. Someone else on the newsgroup said it best - "At
last, a decision that no one will like".

It's a moot point - I don't own that sort of knife. There
are all sorts of techniques for disarming a smaller person
if he is ignorant enough to get within reach. Each encounter
will require a judgement call based on perceived odds.

A word from Newsline...

Newsline was the only Amateur Radio news and information service to have a reporter in Washington D.C. at the time the Report and Order on Restructuring the United States Amateur Radio Service was released to the general public. Because of this, we are able to bring you a first hand report. We hope you will find what follows as being of value to you.

Also, may we take this oportunity to thank all of our listeners and readers for thir constructive criticism and their support the past 23 years. As we begin the 21st century, we pledge to continue to do all that we can to keep each of you informed on the information that you need in your day to day Amateur Radio activities.

Happy Y2K from all of us to all of you.

The Newsline Team

Newsline 1168

Newsline Report number 1168 with a release date of Friday, December 31, 1999 to follow in 5-4-3-2-1.

The following is a Q-S-T. An end of the century surprise from the F-C-C. The year 2000 will be the year of restructuring the United States Amateur Radio Service. Find out the details on the final Newsline report of the
20th century coming your way right now!

(Billboard Cart Here)

**

RESTRUCTURING OF HAM RADIO IS HERE

The F-C-C has made good on its promise and has released the long awaited Report and Order on restructuring the face of ham radio in the United States. It's a document that is filled with surprises as we hear from Newslin
es Paul Courson WA3VJB in the nations capital:

--

Traditionalists may fret that the code test for the Extra Class license will be only 5 words-per-minute, and that the Novice, General, and

Advanced Class licenses will NO LONGER be available to newcomers.

The NO CODE license will continue and be called the Technician Class, allowing operation only above 30 megahertz.

The FCC believes the changes, announced in the final hours before the agency broke for the New Year's holiday, will streamline and revitalize the structure of the Amateur service. They take effect April 15th.

The Commission's executive summary highlights the changes like this:

- Only three types of license from the present six.
- Only a single, 5 wpm code test for the new General and Extra Class license.
- Only a three-part range of written tests for licensing, instead of five possible elements under the current system.

Newly licensed hams will have available to them a Technician, a General, and an Extra Class license. Most existing licensees retain the option of renewing and keeping the name and operating authority of a present-day clas
s, such as Advanced, and Novice. The Tech-Plus license will renew as Technician with existing privileges on HF.

Incoming Technician licensees face a 35-question test element, and a candidate for General will have to pass that test PLUS an additional 35-questions, and the 5 wpm code test.

The Extra Class license will require a written test of 50 questions plus the two sets of 35 just mentioned, along with the 5 wpm code test.

It's been ten years since the last major overhaul of regulations governing the Amateur Radio Service. The FCC said the latest restructuring takes technological change into account, as well as operating trends which have
minimized the prominence of Morse code.

And while the Novice class license won't be issued anymore, except for renewals, the Commission said the comments received did NOT provide a clear concensus on what to do with the protected band segments on HF, now set as
ide for Novice CW use. Instead, the agency said it will wait and see whether rising technology could qualify for those protected sub-bands, license class notwithstanding.

The Commission deliberated the code controversy as presented among the 22-hundred comments filed in response to the Notice of Proposed Rulemaking after it came out more than a year ago.

The FCC concluded that the more stringent CW requirements did not serve any regulatory purpose, nor did the faster speeds prove someone could advance the art of radio as defined as a purpose for the Amateur Service.

The agency relied on the old international treaty justification to explain why it must preserve a code requirement. The 5 wpm test, the Commission said, meets that international standard for operations below 30 megahertz
Moreover, the FCC said it would NOT "sunset" the remaining 5 wpm test should future treaties abandon the requirement. The Commission suggested it'll deal with that issue when and if the time comes.

The Amateur community is already "dealing with" the prospect of relaxed licensing requirements. A quick sample of comments on 40 meters phone found most people concerned about the watered-down code requirement more than a
ny other issue in the restructuring:

From Dave, W3NP:

I have no problem with them lowering the speed requirement.... for the higher class licenses... if they can demonstrate that the written portion will guarantee at least reasonably, that the applicant is technically compet
ent.

From Mike, WN3B:

Ah, there is no CW requirement -- 5 wpm -- that's uh, we're certainly reducing our standards, the way I see it.

And from Carol, W4CLM:

It's not so much an ancient art, such as CW having been watered-down, as it's more a matter of a continued dumbing-down of America. Give me something for nothing type of attitude.

The FCC said it hopes the rules change will allow currently-licensed hams to do more to advance the art of radio, along with eliminating some obsolete requirements which may discourage people from joining the hobby.

The agency also hopes to reduce how much it costs to regulate the Amateur Service, while promoting what it calls efficient use of allocated spectrum.

Other changes in the restructuring include phasing out separate station licenses for RACES, the Radio Amateur Civil Emergency Service, dating back to 1952. It was established as a temporary communications system for civil
defense. The licenses won't be renewed, but the FCC anticipates emergency communications will continue as they have been doing under club, military and individual station calls.

Among changes for the Volunteer Exam Program, existing Advanced-class licensees will be able to prepare and administer tests for prospective General Class operators. The FCC is also giving more power to Volunteer Examiner
s to design and carry out the testing of prospective hams.

Newsline's comprehensive coverage of the Restructuring of Amateur Radio continues, in a moment.

In Washington, I'm Paul Courson, WA3VJB reporting for Newsline.

--

What about the impact of restructuring on the ham-in-the street? What will it mean to him or her. For an analysys, we go to CQ Magazine editor Rich Moseson, W2VU:

--

The immediate impact of the FCC's restructuring decision, in my view, is that our hard-working Volunteer Examiners had better get ready for a crush of applicants before April 15th -- especially those with Tech-Plus and Ad
vanced Class licenses -- who want to pass written Elements 3B or 4B, respectively, and qualify for instant upgrades to General or Extra after the new system kicks in. This is because the FCC will recognize credit for all
exam elements already passed, and waiting until after Tax Day to take the upgrade exam means Techs and Advanced hams will have to be retested on material they've already passed in Elements 3A and 4A. Getting credit for th
ose written "B" elements ahead of time means they'll have everything they need to qualify for an upgrade after April 15th.

Here's an important note: there will be no automatic upgrades. Even if you already have all the element credit you need to upgrade, you will still need to come to a VE session, show the examiners proof of all that element
credit and fill out a Form 605. And yes, you'll have to pay the six dollars and 65 cents.

Why the extra paperwork? It's simple -- the FCC won't take on any new responsibility that's going to cost it money or add to its workload. By transferring the paperwork responsibility to the licensee and the VEs, the appl
ications are processed through the electronic system already in place and cost the Commission zero in terms of dollars or hours.

Overall, this decision should reverse the trends we've seen in recent years of declining numbers in the middle license classes. Removing the barriers of 13- and 20-word-per-minute code exams should prompt many hams to dus
t off their study guides, although it might be best to buy one that's up-to-date. Our advice in the February issue of CQ: No matter what license class you have, besides Extra, get studying, and have as much element credit
as you can in hand before April 15th.

--

This is only the beginning of the restructuring story. Obviously, not everyone will be happy and requests for reconsideration on several parts are inevitable. The complete text of this Report and Order is available for
downloading at our website. That's at w-w-w dot a r newsline dot o-r-g. More on restructuring, next week. (Newsline)

VENEZUELAN HAMS ACTIVATE IN FLOODING DISASTER

Turning to other news, ham radio is still providing important emergency communications in the wake of mudslides that killed thousands in Venezuela. Rick Lindquist of the A-Double-R-L Audio News says that radio amateurs w
ere called up because they could do what no other service could:

Word from Venezuela is that hams activated early on during the flooding and mud slide disaster that struck that country's Caribbean coast December 16.

"The emergency is by all means the major disaster that ever happened in Venezuela in modern times, and there is an ongoing need for further communication support," said Pedro Seidemann, YV5BPG.

Seidemann says Radio Club Venezolano club station YV5AJ and national emergency net station YV5RNE are on the air on the official emergency frequency 7090 kHz as well as on local 2-meter repeaters and monitoring 146.580 si
mplex.

Initial flooding following several days of sustained rainfall was exacerbated by mud slides resulting from overflowing creeks coming down from the Avila mountain range. "Mud slides, some high in the mountains, were the ma
jor cause of the disaster in this part of the country," Seidemann said, noting that the sustained rains are considered "rather unusual" in that part of the world.

Officials say the death toll in the flooding and subsequent mud slides could go as high as 20,000. Seidemann said countless people are still unaccounted for, and--especially in the seacoast area near Caracas--many bodies
have been buried by thick mud.

"Venezuelan Civil Defense organization and Conatel--the national telecommunication administration--and the Red Cross have asked RCV for its urgent ongoing support in the seacoast townships near Caracas," Seidemann said th
is week. Hard hit are the Barlovento area east of Caracas and the Falcon State in northwestern Venezuela. "There, local radio communications have collapsed, and highways are cut. Large areas are without electricity." Seid
emann said the power outages also are affecting telephone service.

Seidemann says RCV is focusing its communications support toward these two disaster areas, where flood survivors remain in isolated regions.

Just before the disaster, RCV had tested its facilities on HF and VHF to check for Y2K compliance. As a result, Seidemann says, RCV already was in a state of readiness when the disaster struck. RCV has acknowledged the co
operation on 40 meters of foreign stations in avoiding the Venezuelan Emergency Net frequency.

Seidemann indicated a need for additional Amateur Radio gear in Venezuela.

Elsewhere, Salvation Army volunteer Quent Nelson, W-A-4-B-Z-Y, in the Atlanta area has been coordinating the health and welfare operation. Nelson has established direct contact with Mike Anson, Y-V-5 slash V-E-7-A-M-V. An
son is within two blocks of the catastrophe in Caracas, Venezuela. The Salvation Army's SATERN has set up a health-and-welfare network accessible at http://go.to/satern.

The complete ARRL audio news is on the web at www.arrl.org. (ARRL)

**

MORE TO MANY CLUB CALL SIGNS

The F-C-C has asked a Los Angeles California ham why he needs twelve call signs and has told him that he must justify each one. In a letter to Joel Pastor, W-J-1-P, the regulatory agency asks for that he must provide a l
ist of the names, addresses and telephone numbers of the members, meeting times and dates within the past year for each club. It also asks him for information on proposed meeting times and locations within the coming ye

ar, and copies of minutes, if any, taken at meetings within the past three months for each club. He is also requested to list any other call signs licensed in his name that are not shown in the F-C-C letter. The F-C-C s
ays that Pastor claims club call signs in several geographic locations including Southern California, Northern California, Nevada, Texas and New Jersey. (FCC)

**

SOUTH HILLS ARC CALL SIGN SETTLED

The F-C-C has settled a dispute between to people claiming ownership of the N-3-S-H South Hills Amateur Radio Club call sign. Back in March of 1999 the F-C-C had written to Ronald Lentz, N-3-W-X, of Pittsburg Pennsylvani
a regarding a complaint filed by the N-3-S-H Amateur Radio Club. This, concerning allegations of an unauthorized transfer of a call sign. The F-C-C says that Lentz did not respond to that letter, and the call sign N-3-S
-H was re-assigned to that group, which was then named Wireless Association of South Hills, Inc.

But the story does not end there. According to the F-C-C's Riley Hollingsworth, records show that Lentz again applied for N-3-S-H in the name of the South Hills Amateur Radio Club, Inc. and that application was granted
in error on July 15, 1999.

Hollingsworth says that the Commission may, upon learning that an application has been granted as a result of an inadvertent, ministerial processing error, set aside the erroneous grant. Therefore it is canceling the N-3
-S-H call sign away from Lentz and assigning his previous call sign, K-B-3-B-R-F to South Hills Amateur radio Club, Inc., and re-assigning N-3-S-H to the Wireless Association of South Hills, Inc.

Hollingsworth has also advised Lentz that any future attempt to obtain this call sign, N-3-S-H, without a full disclosure and justification of the circumstances on his application will be considered an abuse of the Commis
sion's processes. This says Hollingsworth will reflect adversely on Lentz qualifications to retain his N-3-W-X Amateur license. (FCC)

**

40 Meter Warning Notice

Still with enforcement news, the F-C-C has sent a warning notice to a Capo Beach California ham that notifies him to stop his alleged transmitting of music on the 40 meter band. In tits November 30th letter to Dave L. F
lanagan, W-A-6-F-C-W, the regulatory agency again cites monitoring

information alleging that he or someone operating his station transmitted music on 7 point 258 MHz that interfered with ongoing amateur communications on
that frequency. The FCC said the interference had occurred over the previous month. It warned W-A-6-F-C-W additional incidents could result in a fine, license revocation proceedings, and seizure of his ham radio station
gear. (FCC)

KENWOOD ASKS FCC TO RULE ON "SKY COMMAND" SYSTEM

Kenwood Communications Corporation has asked the FCC either to declare that its "Sky Command" remote control system complies with Commission rules or to waive applicable sections of the regulations to make it legal.

The "Sky Command" system, which Kenwood has been marketing for about two years, lets the user control a fixed high frequency station using a pair of dual-band transceivers. Sky Command operates in full duplex, using a 7
0-cm frequency to transmit audio and control commands to a dualband transceiver at the remote station and a 2-meter frequency to transmit received audio via the remote station's SkyCommand transceiver to the operator's tr
ansceiver. Sky Command's V-H-F link does include a Morse code I-D.

The ARRL has declined to permit Kenwood to advertise its "Sky Command" system in its Q-S-T magazine. The A-R-R-L maintains that the system is not legal to use as it's configured because the use of a 2-meter frequency wou
ld cause amateurs using the system to violate Section 97.201(b) of the Amateur Service Rules. This section limits auxiliary operation to certain frequencies above 222.15 MHz.

The Kenwood request has been assigned as D A 99 dash 2805. Comments are due by January 31st with reply comments no later than February 14th. (ARRL)

TV: 8VSB vs. COFDM

As we head into the 21st century a major disagreement in the world of digital t-v could eventually impact on the way that even amateur

television enthusiasts operate. Newsline's Jim Dameron, N-8-T-M-W has more:

--
Bob Gonsett's C-G-C Communicator notes two stories concerning the introduction of digital television in the United States that will be of interest to fast scan Amateur Television enthusiasts.

They come from the publication Tech Notes and the first of these involves a report that the Department of Defense has reportedly raised concerns about the 8-V-S-B system as it is currently implemented. This is because th
e D-O-D says that 8-V-S-B requires outdoor antennas which are vulnerable in natural and other disasters. The article says that 8-VSB has trouble reaching indoor antennas and the D-O-D reasons that the 8-V-S-B transmissi
on system will limit the government's ability to communicate with its citizens.

The second item is a letter from Mark E. Hyman, who is the Vice President of Corporate Relations for Sinclair Broadcast Group. Hyman writes urging other broadcasters who are as of this time uncertain of their position re
garding 8-V-S-B verses the European C-O-F-D-M system to write the F-C-C and ask that it open a public commentary period on the matter.

Hyman's complete letter is available on the web at http://216.24.35.148/cgc/. Click on Additional Postings then click on 'SUPPORT THE COFDM VS. 8-VSB DEBATE.'

--

As we go to air, one of the broadcast trade journals is reporting that numerous broadcasters have signed a Sinclair Broadcast Group petition asking the F-C-C to re-open the 8-V-S-B verses C-O-F-D-M issue. (CGC Communicat
or, BRT)

Burrowing Owl Search Area Increases

Its barely 2000 but Joe Moell, K0OV, says that more volunteers in southern United States are needed for the Burrowing Owl Project radio tracking project.

According to Joe, forty-eight owls wearing miniature radio transmitters left Saskatchean and Alberta last fall. Where are they now? Probably in southern states somewhere between California's Imperial Valley and the east
coast of Texas. Some might be in northern Mexico but no one really knows for sure. That's where hams and other monitoring enthusiasts come in.

If you have a sensitive receiver, scanner, or wide-range handi-talkie that tunes from 172 to 173 MHz you can help. If you have radio direction finding gear for that frequency range, so much the better.

For more information, see the Burrowing Owl page of Joe's "Homing In" Web Site. Thats where you will find a list of the 33 still-active bio-tag frequencies and information about suitable equipment for monitoring at 172 M
Hz. Most important of all, there's information on what to do if you receive a tag signal.

The "Homing In" URL is is simple to remember. Its www dot homingin dot com (K0OV)

**

P3D Past Y2K

The year 2000 should see the long awaited launch of the Phase 3 D ham radio satellite. So says AMSAT North America President Keith Baker, K-B-1-S-F.

In an article on the AMSAT B-B-S, Baker says things are looking good for a lunch of the Phase 3-D ham radio satellite during the next twelve months. According to Baker, the bird is still in Orlando where the satellite te
am has been busy getting the last-minute paperwork clearances and shipping details in order. This so that the satellite can be transported to the launch site at Kourou in French Guiana.

Baker says that AMSAT is waiting on various government agencies to issue the final, updated versions of the paperwork and clearance documents. Once all are in place, the shipping contractor will the spacecraft and severa
l pieces of associated ground equipment for transport to the Kourou French Guiana E-S-A launch facility. As previously reported, a launch contract accepting Phase 3D as a payload for the first suitable Arianespace Ariane
5 vehicle launch was signed last October 5th. (AMSAT-BBS)

**

Houston AMSAT Net Move Reminder

Also, Bruce Paige, K-K-5-D-O reminds us that the Houston AMSAT net moves to its new satellite home effective January 4th. If you have a home C-cand satellite system with a full size dish you can find the net on T-V-R-O N
et on the G-E Americom Spacenet 4 bird. The net will air on Transponder 6 Horizontal using a 5.8 wideband audio subcarrier. The net originates on the 147.10MHz FM repeater in Houston, Texas and is carried by many repeat
ers throughout the country. (KK5DO)

**

DX

In D-X, the Amateur Radio society of New Caledonia, has announced an Islands on the Air Dx-pedition that may activate a new D-X-C-C entity. The location is the Chesterfield Islands with a team headed by Eric Esposito, F-
K-8-G-M. Look for the part one of the operation to commence on March 15th. Pending action on the society's application to the I-A-R-U for membership, the second phase may turn out to be the initial operation from a new D
-X-C-C country. This is slated for March 23rd. This DXpedition is sponsored by Yaesu and supported by the Radio Society of Great Britain's Islands on the Air management team. (OPDX)

And a lot higher in frequency, the newly formed Roadrunners Microwave Group in Texas has announced plans for its first cumulative contest for all bands above 220 MHz . Called the Year 2000 event, it begins on begins Janu
ary 1st and ends next December 31st. The object of the contest is to promote greater day-to -day use of the higher amateur frequencies. For complete rules, scoring sheets, multiplier sheet and the like, send a self addr
essed stamped envelope to the Roadrunners Microwave Group, Post Office Box 9-3-1-7-5 Austin, Texas 7-8-7-0-9 dash 3-1-7-5 (Roadrunners)

**

Year 2000 On The Air Events

And finally a look at how hams around the world will be ringing in the year 2000 with on the air operating events. Some of these will last a month or more. Q-News Graham Kemp, V-K-4-B-B has the list and a lesson on the
word "millenium:"

Special events for Y2K. Interesting to note how correct John Aarsse VK4QA was at the start of 1999 in his column 73 on QNEWS. You'll recall how John pushed the fact that the new millenium did NOT start until January 2001
and it would be just a publicity and money making event in 2000 then we'd do it all again in 2001.

Yep over the past 5 weeks or so only 1 mention of the millenium for special events... rest are correct in celebrating the start of the 21st Century... as we've said... stay tuned for NEXT year!

Y21TA --The husband and wife team of TA3J and TA3YJ is operating until the
21st of January 2000 at 2121 UTC as YM21TA, a special event station to

celebrate the dawn of the twenty-first century. QSL is direct to TA3YJ or via the bureau.

MOLDOVA, ER. Special Event station ER2000A is active until January 20 to celebrate the new century. Please QSL via ER1DA.

HONG KONG, VR2. The Hong Kong Amateur Radio DX Association will sign VR2K until January 31 on all HF bands. QSL via VR2XRW.

ZL2OOO The month of January 2000 will be the last year and the close off date for applications will be June 30th, 2000. A reminder to anyone who has worked ZL2000 these past years and have forgotten to apply, can still d
o so, and remember..... only ONE contact with a ZL2OOO station please.

The cost of the Award is $5.00 Aust, and $10.US for overseas stations outside the Pacific Basin. No Stamps! No IRC's unless making an enquiry about the Award, and then ONLY 1 IRC please. Don't pay postage for someone else
!!)And no money orders that are not payable outside of your country. ZL2OOO Stations can be found on most HF Bands in January, phone and CW. Contact on Packet: ZL2RIC @ ZL2AA.#38.NZL.OC or preferably e-mail to ricol@xtra.co.nz

>From Q-News Australia, I&#65533;m Graham Kemp, VK4BB, for Newsline

---

Thanks Graham. And a happy and prosperous 2000 to you and your staff at Q-News. (Q-News)

**

CLOSE

With thanks to the A-R-R-L, the C-G-C Communicator, Daily D-X, the F-C-C, The Ohio Penn D-X Bulletin, the Radio Society of Great Britain, Spacenews and Australia&#65533;s Q-News, that's all from the Amateur Radio Newsline. Our
webpage is at www dot a r newsline dot org and our e-mail address is newsline at a r newsline dot o-r-g. Also, the address for the Newsline support Fund is Newsline, in care of Andy Jarema, N-6-T-C-Q, P.O.Box 660937, A
rcadia, California 91066.

For now, with Bill Pasternak, WA6ITF at the editor's desk, and for all of our reporters and producers here in the United States and around the world. I&#65533;m Bruce Tennant, K6PZW, wishing you a great year 2000 and beyond.
Thanks for your continued support. And most important of all, we thank you for listening.

Darrell,

Basically a sound idea but it runs counter to a really basic thread
that perminates the entire rulemaking - the FCC wants to make it as
easy as possible for them to administer ham radio. Your proposal runs
counter to that.

Now, I'll add my $0.02 to the whole discussion. I first got
interested in ham radio in 1958 at the age of 9 - got my first license
(Novice) in 1963; became a General in 1965. Built my own first rig
(transmitter was crystal controlled 6J6 oscillator and an 807 final,
receiver was a Knight-Kit regen receiver, later traded in for a
Hallicrafters SX-25, which I sure wish I had of kept). Had some good
times as a ham - even met my second wife via ham radio.

However, I lost interest in ham radio in the early 80s when I got
into computers and let my license lapse in 1983. Sold my last HF rig
(an SB-104A with all the goodies) in 1985 but still have, in the back
closet, my old 2 meter rig (a Motorola Metrum with the PLL exciter
board conversion kit). I've seen a lot of changes in ham radio, and I
think that, all in all, this R&O will be good for the hobby.

Regarding the code test, remember back in the old days when the code
test was one minute error free copying AND you also had to send one
minute error-free (AND you had to use a straight key - no "bugs" or
keyers)? We sure have come a long way to the multiple-guess code test
and no sending requirement! To many people the code requirement is a
real emotional issue - I'll admit it was for me for years. I'll go
along with the reduced speed requirement, though I wish they would
reinstate the direct copy instead of the multiple-guess.

To me, the more important aspect of ham radio is the technical knowlede of communications and how to apply that knowledge. To that end I'd like to see the tests upgraded with a closed question pool. Another poster mentioned that the tests are about a generation behind current thehnology - that should be rectified. The max. grid current on a 6146 was valid in 1970; far less so in 2000. Some basics are timeless, such as basic electron theory and antenna basics, also basic operating procedures. From my listening to the HF bands lately, that last item is in DIRE need of attention!

A friend of mine from Germany has gotten my interest in ham radio restarted, and I was planning to go up for a General sometime in early February - maybe now I'll hold off until April and go for the Extra on the first shot (lordie, in 1963 the Extra was like a shining light on a very far away hill for me).

I never thought I'd hear myself say this, since in the past I've always come down on the side of "quality VS quantity", but the bottom line is that what is going to save ham radio from the "spectrum vultures" like the HF broadcasters and another UPS with a hair-brained scheme is NUMBERS - that is what the politicians at the FCC respond to. The more of us there are, the harder it is for them to screw us (more hams=more hams that VOTE). Thanks goodness we do have a few hams in the FCC that can be a voice, but it still comes down to numbers. Something else that would help is to get more hams elected to office - many of you know what a champion Barry Goldwater (K7UGA) was of ham radio during his years in the Senate. We don't have a ham of his stature in national office presently.

Well, I've consumed more than my fair share of bandwidth, so I'll close with the following thought - - -

Look at this situation keeping in mind how the world IS, not how we'd like it to be. We have to deal in REALITY and in the present, not in the past.

Regards,
Bill Bowen
bowenb@best.com

You are admitting that yourself & your peers are unable to
pass the higher level amateur radio tests for upgrading until
after April when the easier upgrades are available.

Did you intend to make yourself & your peers look stupid & lazy?

I got my Extra class license several years ago the old fashioned way,
I EARNED IT & started taking CW tests at the FCC OFFICE
WHICH REQUIRED SOLID COPY and not multiple choice for a
passing grade!!!

Normally you would be quite correct. But this little tit for tat was all about Cecil's original post (below). He said what *he* would do in *all* situations, and that is to die rather than be robbed (for principle). However he has since changed his tune, so the subject is closed (for me anyway)...

Cecil's death wish:
>> >most of the Texans I know, including
>> >myself, would rather die defending our property than be robbed.
>> >It's the principle that matters.

HUH?????? We asked for T/G/E, 0/5/5 ... that's what we got.
I call that a victory. But please note that the subject line reads
"and ham radio in general," recognizing that the victor is not
*just* NCI's ... we merely "spearheaded" the movement.

We never expected to get more than this at this juncture.
There was no way the FCC or State Department would
go for "welshing" on the ITU Radio Regulations (S25.5).
However, when S25.5 goes the way of its cousin the
Dodo Bird at the WRC in a couple of years, I believe
you'll see the remaining 5wpm Morse test become extinct,
too. The ONLY reason the FCC cited for keeping ANY
Morse testing now was the ITU obligation, which they
felt was "unwaiverable."

73,

But a victory does not necessarily mean the war is won and Carl's next
battlefield has already been prepared for him by sending out his little
love notes containing his prophetic or pathetic words as they pertain to
DX'ing and contesting and yakking. Aspects of amateur radio that
encompass far more people worldwide than in the US. It was stated many
times that Carls' words would come back and byte him in the ass, and from
what I have read so far, they are waiting for him to expose himself
internationally. Boy will this be great or what

Reeldeal, It's fair to say I get off at the same place you do. We are both Americans exercising the First Amendment. As such, it is legitimate, indeed lofty, to post what is inside when it comes to the welfare of a newsgroup. And that is the limit of my efficacy, as it is, yours.

Speculating that by my post I'm promoting over the legal limit in power, is beyond that efficacy. In my view, you're introducing cheap calumny and invective to the lofty concept of redemption. I have always been law abiding and that applies to all aspects, including legal power, of ham radio.

Aaron,

Perhaps we have different definitions of "rocket science"... In the present context, the term was meant to suggest that having a good understanding of the technical details of how the gear works is an important aspect of ham radio. I would say that anyone who has done "home brewing" has some feel for what I'm talking about. This is not to say that commercial gear users should be considered "lesser" in some way - I'm just in favor of keeping the technical know-how part of ham radio alive.

I'll be the first to admit that I haven't "advanced the radio art" with my soldering iron.... but I've maintained an important link with the history of our pastime. I don't think that many people are going to home-brew something that beats an FT1000D (or equivalent) in performance or features, but it's nice to be able to understand what's going on inside the box.

You asked about my station, so I told you about it...

Concerning the FCC's recent simplification of
ham licensing and reduction of code rate:

There are a number of CB-Plus guys going around
saying they're going to "gloat" at the old timers
at the ham clubs and "rub it in their face" when
they take their government handout "upgrade" to Extra.

I propose that we old fossils who actually
worked for our tickets offically adopt the
terms "WELFARE GENERAL" and "WELFARE EXTRA"
when refering to these snide people.
I don't mean the sincere folks who come after
and act like decent people- I mean specifically
the CB-Plus guys who want to act like
horse's asses. When they "rub it in,"
remind them they're "Welfare Extras."

n0za you ask a very interesting question! In this day of age of greater control of personal freedom may I posit one explanation for the changes to come. Presumeably, with restructuring (destructuring) it might ultimately make amateur radio so untenable for communications resulting from an overall lack of operating discipline that it might actually force an exodus to the INTERNET:

"It is pointed out by the organizers of the League that up to the advent of wireless telegraphy it was necessary to rely upon either a telephone or telegraph company of the Federal government, for transmitting intelligence from one part of the country to another. The coming of wireless telegraphy has made it possible for the private citizen to communicate across great distances without the aid of either the government or a corporation, so that the organization of the relay league actually marks the beginning of a new epoch in the interchange of information and the transmission of messages."

Quotation from July 1914, Popular Mechanics appearing in _200 Meters & Down_ by Clinton B. DeSoto, page 40, copyright 1936 (reprinted 1981) published by the ARRL.

It might make interesting conversation to speculate that anything to get communications into a mainstream digital network would make the task or monitoring and control of a population so much easier and efficient.

Yea, your posting bullshit trolls on Usenet, when you should be listening to how everyone else is checking into the net. Although I'll admit it's a good troll, you seem to have caught me.

> Also what frequencies do u stay clear of on 40 and 20 for

For you? I'd say steer clear of 7.025 to 7.1, 7.150 to 7.3 and 14.025 - 14.350. Those frequencys can be a bit challenging for a General who has never made any contacts on the air. It was so amazing after spending a 7 months as a Novice I knew how to work DX, check into nets, different contest exchanges, and how to RC with the A1 Ops. You should try that.

> > calling cq I know there is a dx net on 14.247 in the afternoon and I should not
> > call cq on there or I will get my head handed to me.

Yea that's because the frequency is occupied, did someone take your General test for you? Since you passed 13 wpm I can only assume you've made some contacts although your questions sound like you've never been on the air. In which case I suggest you go back to the Novice bands and learn. That's what they're there for, after you learn how not to call CQ on an occupied freq and how to check into a simple net then you can move up and talk to the big boys.

Translated so even Aaron can understand: Most of the Texans I know,
including myself, would rather risk death defending our property
than surrender to a robber who is likely to kill us anyway.

Curt M. Breneman wrote
>Perhaps we have different definitions of "rocket science"...

Probably so. A loose definition (to me) would be someone who is extremely knowledgeable and at the cutting edge of his field. Rocket scientists and brain surgeons are often used as the examples in these often used phrases. I think you will agree that most hams don't compare to either brain surgeons or rocket scientists (my first point). And further that it is unrealistic to think that this hobby (and the average ham) will ever be in that league (my second point).

My only purpose in asking about your station was to determine if you qualify for rocket scientist ham status. I figured it likely that you were no rocket scientist, but rather an average ham like most of the rest of us. Was I wrong??

What about those ten year vanity license fees of $14.

Sure we can use up our old supply of 1000 QSL cards in six months, that's
one way to get folks back on the bands.

But... Do you propose that the FCC give back the $14 vanity fees?

In the past, old callbook listings have been accepted by the FCC as
proof of former licensure at a particular time/grade.

I have asked Bill Cross of the FCC for a clarification if this practice
will continue to be acceptable. When I receive a reply I'll post it here.

I'm not very serious at all. I'm just wondering why you think amateurs should be so quick to offer modification information to someone who we (as a fraternity) don't know whether is licensed or not. Additionally whether your a ham or not the use of the gear there IS illegal if you transmit, is it that big of a deal if you as an amateur want to run 10w or so on the CB bands, probably not. It's the way you asked the question and the flaming comments about the hobby that soon followed that got you a non response for the mod, and the comments that you received. As far as ONLY being a general, there are many on this ng who are much much more technically competent than I, however based on the tone of your posts I'm sure I'd smoke you if it came to building a receiver or transmitter. By the way I think CB is great I tune 27.185 on my DX-70 when traveling.

> I believe the the Family radio freqs. are 476.MHz or something like
> that.
> Didn't those also come from amateur bands?
> If I am wrong I am sure someone will point it out.

I'll be happy to, no they did not come from the amateur bands, around 1945 amateurs had access to anything above 300 MHz sometime between then and 1950 (Referencing Handbooks from those years) 420 to 450 MHz was designated as a UHF amateur band and that's where it's been since then (with some possible changes to the low end) The GMRS simplex freqs are 462.5625, 462.5875, 462.6125, 462.6375, 462.6625, 462.6875 and 462.7125 MHz. These channels are shared with the Family Radio Service. We haven't lost anything to them.

> And about the old hams not saying hello,
> I am very outgoing at hamfests and meetings,I am a truck driver who
> is not scared to say his opinion or share and idea.
> Most drivers I know are fantastic at communication and are BS artists
> to boot. You have to be , to deal with dispatchers , receivers, public, law
> enforcement on all levels.

Well that's good for you, but comments like "Look at your group of people, tell me I'm wrong about death of ham.
It's on the horizon, you can see it." make me wonder why your complaining, doesn't sound to me like you care much about the future of the hobby if you're making comments like this. On the one hand you complain what prudes the old timers are and

then on the other you ask how to modify ham gear to CB??

> Here is a question for you,Tim:
>
> What are the main blocks of a phase-locked loop frequency synthesizer?

I dunno, I remember breaking apart LM565's trying to see what was inside but I could never find any main blocks just tiny chips of silicon. I am currently working on a tool that will let you remove the main blocks and replace them with smaller more efficient ones without breaking the silicon.

> I only put this to prove I am an Advance operator. Yes, I do know I
> could have copied it. But if I was a cb'r why would I even know where
> to find the question?

A call sign would prove your a licensed operator, everything else is Usenet babble.

> I know the answer to this question, cause I was tested on it.
> If you know it, or even how to look it up, you should be moving to
> upgrade your license.
> The next time I ask a simple question about mods, try to at least give
> a civil response if you know they exist or if they don't .
> Don't tell me the right or wrong of it.
> I will take care of the legal part of it, That's what Ham is about.
> Experimentation!

1. As an Advanced class operator you should by now be sensitive to the relationship between amateurs and CB operators operating high power or out of band above 28 MHz.
2. My point, which you seemed to entirely miss, was that adding a call sign and stating your intentions would have generated a thread of radically different responses than what you received. I notice to date no one has provided the information. I am not willing to share illegal mod information with non hams since I don't support what's happening at the low end of 10m or CB'ers running 100w with no knowledge of proper filtering or the interest of even trying to run it clean. Do you think that the hams on this ng are out of line by not offering this information?

Amateurs experimenting and modifying equipment is part of the heart and soul of the hobby, but that's why you were issued a call sign, since you choose to remain anonymous then expect to get the same answer that the rest of the CB'ers get who come here looking for help to modify rigs to operate illegally in the CB bands. Get it?

It's pretty sad that some people pop-off about
a post when they haven't actually *read* it....
Let me spell it out *again*-

I'm all for newbies.
I don't have a problem with people getting tickets
the new way. I even *support* some of these changes.
God knows we've got to have the new blood.

I DO have a problem with the "HA! I got mine
and I didn't have to do that CW crap, so go eat it!"
attitude I've heard expressed several times by
some nasty little buggers I call "CB-plus."
For those guys, I recommend the "Welfare Extra"
zinger be ready.

Now, if only the detractors will read -this- one
(fat chance...sigh!).

Dave S.

You can, or course, do as you wish. On the other hand, us "old fossils" can act with a bit of "class" and NOT act like those we disapprove of. If "they" are the future of amateur radio, let "us" show the world what amateur radio "was", and perhaps the folly of dumbing down will not be lost.

Aaron,

No, I guess I'm not a "rocket scientist ham" by your definition - just a
normal one who thinks there should be an element of technical expertise
retained in the hobby. I don't think that it should be allowed to
evolve into a hybrid of FRS (VHF/UHF appliance operators) and CB (an
example of a degenerated HF band). So, while ham radio may not be
"rocket science" by your definition of the term, its participants should
be encouraged to immerse themselves in the technology, not just the
jabber.

You shouldnt generalize like that, and take a look at who is actualyl calling for these mods. They are typically not the new hams but the established higher class hams, not 'new cb-pluss operators', who arent even here yet. This supposed group wont even show up until after April 15. People like you and others who are doing all this complaining remind me of a nazi propogandist who knows that when the truth doesnt fit the dogma, throw up smokescreens to confuse. This stuff is realy pathetic and misplaced. A small portion of american hams have really embarrassed themselves in the eyes of the rest of the world I am sure.

HF digital voice has already been done. At the Pacific NW Division Convention in 1999, audio tapes were played demonstrating actual HF digital voice QSOs that had taken place and which fit in about 2.3 khz of spectrum. The signals were modulated digitally - that means using DSPs to create the waveforms, with very sharp drop offs at the band edges. Spectral displays were show so we could see the result.

There are some URLs out there for internet sites describing the experiments. Unfortunately, I do not have them handy but you might just search for HF digital voice and see what you find.

It sounds like an earth leakage detector (or safety switch) would
be a good investment at your QTH! They detect current in the earth
wiring and if any is detected, they trip and disconnect the active wire.
This assumes that the metal case of your rotator controller is earthed
(3 pin mains connector).

464. "Once Upon a Time ..."

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-03 00:00:00 UTC
From: Trebb@webtv.net
Message-ID: <14054-3870C4F6-23@storefull-243.iap.bryant.webtv.net>
Source record: 123231

Once and for all, let's correct the false Civil War proposition:
Northerners were the good folks; Southerners, the bad.

(Please be advised that I am not a racist; in fact I am a civil rights' advocate.) Given the fact that the newly formed federal Republic was silent on legal authority for secession, the Civil War doesn't come down to simple analysis.

As the "radical Republicans" came to power with the election of Abraham Lincoln as President, Southerners became understandably alarmed that the Federal government would usurp their State's rights to govern themselves. They came to believe that because they had entered the Union of their own volition, they could leave that way.

Slavery per se wasn't an issue at first, as the Fugitive Slave Act called for the North to return all escaped slaves. Lincoln said on more than one occasion that he would bend any way on slavery to preserve the Union. Even the Emancipation Proclamation did not fulfill its billing: It freed virtually no slaves, designed instead to keep Europe from intervening on behalf of the South and to open the door to conscription of blacks.

During certain Northern occupations, there was arguably as much or more mistreatment of blacks than was meted out by the South. Slaves not only became a decisive factor in fighting for the North (100,000 fought for the Union), but a much smaller contingent, believe it or not, fought for the South, some of whom picked up arms voluntarily.

Here in Florida a never-determined number of slaves were ready to give any Union soldiers, black or white, "the gun."
While slaves enlisted in droves in Jacksonville, some were indeed content with the plantation system, fearing the uncertainty of freedom. Of course, the horror of the auction blocks still flashes to mind.

Some Florida descendants of the plantation system bristle at media treatment of their cause, as they consider themselves equivalently just. They contend that the plantation system was doomed anyway, and time would have cleansed as a matter of course what Lincoln accomplished with the blood of America on his hands. Floridians fought to protect their land from Northern invasion, where half of its property value (excluding slaves) was lost in the War.

The true facts are no simple matter to explain while appearing to be a fair minded. But we should make the effort to disseminate real history, not fiction.

Doc,
Llloooyd is NOT A SON OF THE SOUTH. No true Southerner believes this
crap he is putting out. He is from MISSOURI. Or should that be
spelled Misery?. I have lived here for over 20 years. If I thought
for a minute the south was the way this fool wants to portray it, do
you think I would have stayed? Hell no. Lloyd is a fool, simple as
that.

Congratulations Murphy for standing up for your/our rights to speak out.

As for the radio info you requested. May I suggest taking that one back to RS and buying the (I think) Ranger XXXX model. It works both 10 & 11 meters with no modifications. Sorry, there are really I believe two manufacturers that make radios that handle both 10 & 11 meters. Check out the CB newsgroup and ask one of those guys. Believe me, they have the answers and you will NOT get any bull shit like you received here. I'm an old time ham (since 1974) and I believe that laws were made to be bent or most experiments would have never produced what we have in this field today.

Maybe we can chat on 10 as you pass my area in your semi. Heck, i'll even chat on 11 with you.

> 11 meter radio in legal range? I do.But the attitude is that I would
> use high power to talk skip.(that's cb lingo).

That's because you sign anonymously with no call sign, had you posted that you wanted to modify the rig for CB reception while travelling or something legit and added a call sign the replys would have been radically different. Do you think it's wrong that hams don't wish to divulge modification information to a non ham? I don't. BTW if you are a ham and have any knowlege whatsoever about using a search engine you would already be transmitting on 27.185 by now.

> Maybe I'll just wait for you to die off so I can get your al mode
> portable cheap from your families. Your kids sure aren't gonna know
> what to do with it.

Wrong, my oldest son has been licensed for a couple years, my 8 and 10 year olds are on thier way. Don't worry they'll know.

> All I did was ask a simple question and I got one good answer and the
> rest was hate and ridicule.

That's because you asked the question the wrong way. As a licensed ham you should have known better than to ask for a 10m mod to CB without explaining your intentions.

> My responsibility is to promote the hobby,
> but why should I try.

You need to ask yourself that question. I do it because I enjoy the benifits of the hobby and want to share, what on earth do "old hams" have to do with that?

> The old hams don't even say hello when you are at a ham fest or a club
> meeting.

Your right. So are you going to follow suite or let the changes start with you?

> Does the Radio Shack near you have the information about your club?

Nope, they don't have any info on local CB clubs either even though they sell a whole lot more of those types of radios.

> I
> bet it don't. Where else are kids gonna find out how to start.
> Not from existing hams.
> And why is that. Did you take it upon your self to give them the info?

You seem to be in a lecture mode here, since your a ham, did YOU give your local RS store information on your local ham club?

> The future of ham radio is written in stone. Doomed
> And don't blame it on me or the likes of me. You and the rest of the
> hams are committing suicide by complacency and self riteous
> indignation

Your the one who just asked why you should promote the hobby didn't you? So why are you pointing the finger at us? Before you tell us how wrong we all are, show us what YOU have done. Seems you want to blame everyone but yourself.

W6RCecilA wrote

>>most of the Texans I know, including
>>myself, would rather die defending our property than be robbed.
>>It's the principle that matters.

>I NEVER said there was "no way out".

Never say never, it is an *absolute word* and hard to defend. Your original (above) statement is also *absolute*. If you had said you would *sometimes* rather die, or gave some other non-absolute statement, then you would have wiggle room. But your *absolute* statement says simply (in all cases) that you would rather die than be robbed for property for the reason of principle.

So I hit you with an example (robber with a gun to your head) that made your statement sound foolish (which it was). Your response was even more foolish. You were old (at 61), alone, and didn't want to die in a nursing home. Now you're trying to back track by changing the subject with other unrelated examples. It won't work unless you amend your original absolute statement, or let this subject die a peaceful death...

>I resent your attempt at mind fornication.

Ah, Mensas are so high tech in their personal insults...

>For a 6'3" 200 lb. physically and mentally trained armed individual,
>there is almost always the chance of a way out...

You mean you, right? Well gosh, weren't you just complaining about being *old*, and didn't you say that you had to have your IC-706 modified (to the CB band) by someone else because your *hands shook* and your *eyesight was bad*? That's hardly the road warrior picture you paint of yourself above...

Let's go back to the days when your call sign said ABSOLUTELY NOTHING
about your class or longevity! All this slicing and dicing and
segregation and pecking-order-mentality based on perceived rank and
seniority belongs in the Army, not in Amateur Radio.

I think the FCC should give us all 6 months to use up our stock of
QSL cards, and then do a one-time redistribution of calls, starting
with W1AAA and just continue sequentially without regard to age/race/
creed/class-of-license/how-fast-you-beeped-at-your-test.

Aaron - you've already clearly stated you are NOT by any means an opponent to private ownership of weapons - and *I* accept that statement from you as honest truth. The REST of this long debate, then, revolves around individual perceptions of courage/protection of personal possessions and family under threat of violence. Since such scenarios vary WIDELY in their individual circumstances, I submit it is virtually impossible to accurately predict HOW a specific incident would likely go down - and only suggest that those of morality and courage WOULD resist such acts to the BEST of their ability, depending on situation. This, rather than the mere cowardly surrendering of personal values, family and possessions. It DOESN'T mean we would commit virtual suicide when a gun is held to our head - or the head of another family member - only that we would aggressively watch for an opportunity to challenge or overcome such an attacker if it presented itself, and pursue it RATHER THAN meekly accept our situation as irreversible, and make NO effort to turn the situation around as SOME seemingly are willing to do.

Is that fair and reasonable?

*The FCC made known its restructuring decision today and it sucks!
*
*I Blame the ARRL!
****

I think you are placing the blame on the wrong entity. If any body needs blame it should be the FCC. In your point of view the whole amatuer world has now come crashing down. If that is your opinion maybe it is time that you not renew your license and give up the hobby. The FCC is thinking beyond your narrow minded thinking and self gratification. They have the insight to realized that left as is, the amatuer radio service will be a foot note in history of radio in the next ten to twenty years. Maybe you will be dead and gone by then and that no longer is of your concern. For the first time in twenty years someone has finally realized the the amatuer radio society in the US will be extend as the Dodo bird by the end of the 21st century. For those of use who will still be arround at least into the middle of the 21st century there is now hope that there will remain an amatuer radio service. I am sorry that you will think of amatures like myself and others who will obtain the full priviledges that the FCC will grant inthe future. These priviledges to you will be obtain by means that in your opinion is cheapened. It is cheapened by the fact that I and others to follow will not have to endure that hardship that you had to. This may well be true. CW, while a means of communications, is no longer the mainstay of amature radio today. Is it becoming a lost art? Most likely. Is it a requirement that high speed proficiency is required for advanced priviledges in other forms of communications? Not hardly. The days where amatuer radio shared bands with commercial maritime ships are long gone and past. Then the need to identify ships in commercial enterpriose and not to interfere with them has long gone. CW will always be a menas of communications. So will AM as well as newer digital forms of communications. The radio service has evolved from a time of experimentation to that of more of a hobby. Experimentation is and will never be lost. Experimentation fosters new ideas. The amature radio service has lost that zeal. I think the service needs an infusion of newer more energetic members. Agreed there will alows be those that are less desirable as some may think. Do we close off the whole bands to only those that will meet a certain criteria? then that smacks of the prejudices of the early 20th century. From an outsiders point of view amature radio has become an elite good ol boys network. Sommething like the exclusive country club atmosphere of the high society.

We now have entered into a new era. I think the FCC has made a bold and daring step in amature radio. While many will applaud, some will shudder in fear of what will happen. Remember this no one is twisting your arm to be a member. It

is become obvious that the FCC went farther than many wanted and to some it may not whave gone far enough. As for me, I am pleased with the ruling. I think it give amature radio a channce to survive well into the 21st and even into the 22nd century. What will happen in the future? No one knows. This has been needed for the last twenty years and now it has come. We have no other choice accept it by be ing a part of it or reject it by not being a part of it. It is your chjoice.

regards
james

*Extra--and a single Morse code requirement--5 WPM.
*
*"We believe that an individual's ability to demonstrate increased Morse
*code proficiency is not necessarily indicative of that individual's
*ability to contribute to the advancement of the radio art," the FCC said.
*
*Besides drastically streamlining the Amateur Radio licensing process, the
*FCC said its actions would "eliminate unnecessary requirements that may
*discourage or limit individuals from becoming trained operators,
*technicians, and electronic experts."
*
*Although no new Novice and Advanced licenses will be issued after the
*effective date of the Report and Order, the FCC does not plan to
*automatically upgrade any existing license privileges. The
*ARRL had proposed a one-time across-the-board upgrading of current Novice
*and Tech Plus licensees to General class, but the FCC declined to adopt
*the idea. This means that current licensees will retain their current
*operating privileges, including access to various modes and subbands, and
*will be able to renew their licenses indefinitely.
*
*Starting April 15, 2000, individuals who qualified for the Technician
*class license prior to March 21, 1987, will be able to upgrade to General
*class by providing documentary proof to a Volunteer Examiner Coordinator,
*paying an application fee, and completing FCC Form 605.
*
*The FCC's decision not to automatically upgrade Novice and Tech Plus
*licensees means the current Novice/Tech Plus HF subbands will remain and
*not be "refarmed" to higher class licensees as the ARRL had proposed. The
*FCC said it did not refarm these subbands because there was "no consensus"
*within the amateur community as to what to do with them.
*

*As it had proposed earlier, the FCC decided to lump Technician and Tech
*Plus licensees into a single licensee database, all designated as
*"Technician" licensees. Those who can document having passed the 5 WPM
*Morse code examination will continue to have the current Tech Plus HF
*privileges. "If documentation is needed to verify whether a licensee has
*passed a telegraphy examination, we may request the documentation from
*that licensee or the VECs," the FCC said.
*
*In addition to reducing the number of license classes from six to three
*and eliminating the 20 and 13 WPM code tests, the FCC also will reduce the
*number of written examination elements from five to three, authorize
*Advanced Class hams to prepare and administer General class examinations,
*and eliminate Radio Amateur Civil Emergency Service (RACES) station
*licenses. RACES will remain, however. "After review of the record, we
*conclude that we should eliminate RACES station licenses because RACES
*station licenses are unnecessary for amateur stations and amateur service
*licenses to provide emergency communications," the FCC said.
*
*Under the new licensing scheme, there will be four examination elements.
*Element 1 will be the 5 WPM Morse code exam. Element 2 will be a 35-
*question written test to obtain a Technician license; Element 3 will be a
*35-question written test to obtain a General license, and Element 4 will
*be a 50-question written test for the Amateur Extra license. The FCC has
*left it in the hands of the National Conference of VECs Question Pool
*Committee to determine the specific mix and makeup of written examination
*questions. Current Amateur Radio study materials remain valid at least
*until the new rules become effective in April.
*
*The FCC's new licensing plan means someone will be able to become a ham by
*passing a single 35-question written examination. The plan also simplifies
*and shortens the upgrade path from the ground floor through Amateur Extra-
*-especially since amateurs will only have to pass one Morse code test.
*
*Elimination of the 13 and 20 WPM Morse requirements also means an end to
*physician certification waivers for applicants claiming an inability to
*pass the Morse code examination due to physical handicap.
*
*The effective date provides a window of upgrade opportunity for current
*Advanced licensees. Between now and April 15, current Advanced holders may
*take the existing Element 4B, a 40-question test, giving them credit for
*having passed the current Extra written examination. Likewise, holders of
*a Certificate of Successful Completion of Examination (CSCE) for Elements
*3B or 4B dated on or after April 17, 1999, will be able to qualify for
*General or Amateur Extra respectively when the new rules go into effect on
*April 15, 2000.
*
*The FCC disagreed with the League's suggestion that it undertake a
*restructuring of operating privileges along with licensing restructuring.
*"We believe that in light of ongoing discussions concerning implementation
*of new and more modern communications technologies within the amateur

*service community, we should accord the amateur service community an
*opportunity to complete such discussions and possibly reach a consensus
*regarding implementation of new technologies before we undertake a
*comprehensive restructuring of the amateur service operating privileges
*and frequencies," the FCC said in its Report and Order.
*
*In its amendments to Part 97, the FCC's Report and Order refers to a "Club
*Station Call Sign Administrator," something that does not exist under the
*current rules and which was not explained in the R&O itself. An FCC
*spokesperson said the Commission plans to issue a Public Notice soon to
*explain the program and to solicit qualified entities to serve as call
*sign administrators for club station applications.

God this sounds like the tale from my father who cried about how far he had to walk to get to the school bus stop ionthe winter snow when he was a kid! Or more like I had to do it, therefore you have to philosphy. Those will never change. If that ideology keeps in the amature radio service then it will go the way of the DODO bird.

This is the elitist good ol boy society thinking. There are those in the service that want to associate with only their kind. It is somewhat of a prejudicial thinking. I have known Extra class lincensee, HAMs, that their sole purpose to get their extra class license was to get away from the novice and general class bands. They talk only in the extra portion. The new ruling now affects that sphere and thus their little minded world has now come crashing down. They have long forgotten that the amature radio service no longer revolves around them. They enjoy paying 2 to 5 thousand dollars for their rigs that should be no more that $600 to $800 max.

Why should an amature licensee have to derive Maxwell's equations? I seriosly doubt that half of the BSEE today that have been out of scholl for more than 2 years just shudder at that thought. Most I know have stated that Fields and Waves was one of the most difficult cousre in EE. I thought very interseting though.

Ramsey was pushing it as far as legality and they new it. They knew
their items were being used illegally, ie., pirate radio, and they were
manufacturing kits targeted to that audience. I don't necessarialy
approve of the way the feds handled it, but Ramsey should have known
they weren't going to get away with it much longer.

> principle.

There you go with the mind fornication again. What I clearly meant was that
in *virtually* all cases, one has a better chance of *surviving* by fighting
than by surrendering. If you suspected the criminal was going to shoot
you no matter what, would you just submit to being shot?

The latest "American Guardian" from the NRA in the "Because I Was Armed"
column, tells about a serial killer with a list of victims. He killed
victim by victim until he encountered Doug Stanton, who was armed.
Quoting the article, "But because the Stanton family had a gun, six lives
were saved. Had there been restrictions on gun ownership, the Stantons
would be dead. This is a fact - not a hypothetical situation."

You, no doubt, would simply have waited to be shot to death. That's your
choice but it certainly is not mine. It's not over until it's over.
Having a gun to your head is no guarantee of being killed. I would
much rather have a gun to my head within reach than have a gun pointed at
me from ten feet away. By doing nothing, you hand the criminal an incentive
to rob you *and* then kill you - I don't choose to do that. But I'm willing
to allow you to make your own decisions about your life. Why are you not
willing to allow me the same freedom.

> So I hit you with an example (robber with a gun to your head) that made your
> statement sound foolish (which it was).

You can perform an experiment to see how foolish YOUR statement is. Have
someone drop a flat dollar bill while you try to catch it. Most of the
time, you cannot. There is an absolute minimum human reaction time. If a
robber puts a gun to my head, it is within my reach. By the time he realizes
that I have gone for the gun, it is no longer pointed at me. Considering
my size and Akido training up against an average sized punk, a few
milliseconds later, he will be wondering if he will ever see again.

> >For a 6'3" 200 lb. physically and mentally trained armed individual,
> >there is almost always the chance of a way out...
>
> You mean you, right? Well gosh, weren't you just complaining about being
> *old*, and didn't you say that you had to have your IC-706 modified (to the
> CB band) by someone else because your *hands shook* and your *eyesight was
> bad*? That's hardly the road warrior picture you paint of yourself above...

I'm old, but I ain't dead. A gun is not an SMD capacitor. Actually,
my age is an advantage. No criminal would expect me of being able to
disarm and blind him within a half second with my bare hands. We
spent many hours learning and practicing how to disarm a person within
reach. The guy with a cocked (unloaded) gun knew I was going to make
a move on him. By the time he could react at his fastest, the gun wasn't
aimed at me anymore. It's much like the dollar bill experiment. Surprise
adds another measure of insurance.

Source record: 123264

2 meter nets moving to HF? That's way too cool. Here's a few frequencies you might want to try:
Daytime:
14.300
14,313
14,302.5
Evening:
3853
3865
3894.5
3898
3901
3950
Another old stand-by:
27,185
If you really want to get a rise out of the "regulars" over your new general class license, try these:
5692
5696
8983
8989
8992
9016
11,175
15,016
Gloating should go over especially well on this list. The "old-timers" here have held these frequencies for many years and will be most impressed with your achievements. Plan to run a lot of power, though. You'll need it to break the pile-ups. But the DX is awesome.

Happy hamming.

*Why blame the ARRL? I'm not a member, but it seems to me that the FCC took
*the restructuring one step further than the ARRL wanted.
*Didn't the ARRL want 12WPM for Advanced and Extra and 5WPM for General??
*How about four classes instead of three?
****

That requirement was there to satisfy the board members. The resolution that passed the board was 9 to 6 in favor of the July proposal in 1998. The first attempt failed in January of that year. The proposal sent tothe FCC was a compromise from the ARRL board of directors.

Belive me this has been a hotly contested subject for over 20 years and many are dead set on change. The change from actually sending and receiving CW to that of only receiving was hotly debated. ANd when the CW test became just a multiple guess test that even caused more of a stir.

I have been predicting that this action would take place since 1979. I have had my license since 1976.

****
*A lot of you ol'timers out there think that CW=CB with respect to this new
*license structure. IMHO, you're wrong! HF has a serious learning curve when
*it comes to long wires, tuners, grounding, etc... It's not like you plug in
*the mag mount to the HT and start yacking!
*
*I worked really hard to pass the 5WPM code last month and I have been
*working a little 10M here and there. After stringing the longwire, tuning
*the MFJ941, the DSP-9+ and figuring out the Icom 706, HF is a lot of hard
*work! It's so rewarding to make a distant contact after all that...Don't
*forget the price of HF gear. You can buy several HTs for what a
*run-of-the-mill HF radio costs. You really have to want to get on HF. With
*the learning curve and the cost, I don't think it's going to be as bad as
*some of you think.
*
*Oh well, bring on the Extra!
****

Today the amature radio service has now become more of an appliance operation. One does not need a technical background nor an engineering background to become an amature operator. Some have associated that if one can learn 20 WPM that should make them more responsable operators. I appluad your dedication to learning CW. I met the requirements of 5 WPM 24 years ago and passed element 3

in 1977. I chose not to go further simply because I did not see the need and still don't see the need. I have not used my key since about 1979.

As for the new regulations effective date of 4/15/2000, I plan to have a new HF rig that I am now working on. Completely designed and built by myself. Always wanted to. I have all the equiptment and parts assembled to start building.

regards
james

FS: ICOM IC-735 HF All-Band SSB/CW AM/FM Transceiver,
100 Watts, General Coverage Rcvr & Full Coverage .1KHz-30MHz Transmit.
Complete w/ items listed below. Have Original Boxes & Manuals
Very Good Condition.

-Full SSB, CW, FM, and AM Operation
-Full Easy Access AFSK Operation
-Semi/Full QSK CW Break-In
-Dual Stable Digital VFO's
-Built-In Pwr/SWR Analog Meter
-LCD Back-Light Dimmer Adjustment
-Memory/Scan/Split-Mode Operation
-Built-In Adjustable VOX Control
-100% Duty-Cycle Transmitter
-Built-In Temp-Sense Quiet Cooling Fan
-Built-In AF Speech Compressor
-PBT & IF Notch Filter

Asking $475 plus shipping.

Victory going of course to the one who first declares victory, eh Carl?

From the standpoint of the FCC declaring code to be absolutely unnecessary as a licensing requirement aside from the ITU requirement, and in view of NCI's declared basic premise (the one which prevents me from joining), the R&O could also be viewed as an abject failure for NCI.

The victory belongs instead to amateur radio, in my view.

Press Release

LogWindows 3.06.50 released

Program available January 5, 2000

Muscle Shoals, Alabama. January 3, 2000: Creative Services Software announced today that the first update to LogWindows, version 3.06.50 will be released on Wednesday, January 5, 2000.

LogWindows was created in 1994 by Ira Chavis, WA1W and had been distributed in the past by AEA, Timewave and SCO. The program interfaces with all of the CSS TNC host mode programs including PacTerm '98, PKTerm '99 and MultiComm Host.

CSS is selling the program through dealers and direct sales.. The program will retails for $49.95. CSS is offering upgrades to current users of the program for $25.00, as well as a competitive upgrade from other logging programs for $35.00.

"If someone purchases or upgrades to LogWindows 3.06.50 now, they'll not only get all the future 3.x upgrades, but also a FREE upgrade to the 32 bit version of LogWindows when it becomes available", said Rick Ruhl,. President and owner of Creative Service Software.

Creative Services Software is at http://www.cssincorp.com
Windows, Windows 95, Windows 98 and Windows NT are Registered Trademarks of Microsoft Corporation.

Call Yaesu and just order one. It's painless and if it's below a couple of bucks, they will usually tell you it's no charge - even for shipping. Can't beat that. If it's an older radio, it will do you well to replace the button anyhow to fix the inadvertent turn-on problem. The new button is a slightly lower profile.

Then, how do you explain the loss of part of 220 MHz? There was no "public interest" served, only the private interests of two corporations: UPS and Motorola. 20,000 commenters were completely ignored, and whole exercise of "taking comments" was a ruse. The facts are irrefutable...the plan was a 'done deal' before a single comment was filed, and no single comment, no persuasive argument, no amount of reasoning or any massive group of comments would have changed the outcome one iota. So why the waste time on such a sham? Look, I'm not out to change your fantasy...if you want to believe in Santa Claus and the tooth fairy, it's ok by me! Keep writin' to the North Pole...

Source record: 123336

The new millennium is underway! Chief among our blessings is the successful cleanup campaign undertaken by the FCC's Riley Hollingsworth, Esquire.

The advance of time has imbued many of us with greater wisdom. Looking back on nearly 50 years of operation, I recall many a gaffe, faulty judgement, inadvertent out of band operation, unnecessarily raucous conduct, and being goaded into behavior which I regret today. Still, I've been fortunate: My license has remained intact all these years.

Can we find it within our hearts to treat all hams who feel similarly with redemption? Can we put animus aside to forgive?

Riley's campaign is brilliant, but, as in all things, casualties abound who would be topnotch participants if reinstated. Won't we forgive and forget, truly making this a millennium of opportunity for all? Without jeopardizing the cleanup campaign, I say we grant the truly apologetic reprieves (trial periods back).

I suspect that the 6 Meter operators were not a bunch of HF CW
fanatics!!!!

In Hawaii I'm proposing that the name and address of every gun
owner be available on the web. It would be nice to know which
neighbors and fellow employees have chosen to belong to our
Second Amendment militia; one would think they would be proud
to be associated with that militia and want the recognition they
so deserve. After all, those of us who served in the real military
had, without choice, our names and addresses published in our
home-town newspapers upon enlisting so it's only fair our militia
members are also so recognized.

That's a great idea, Jeff. A robber gets the name and address off
the web and steals the gun when nobody is home. The criminals will
love it. They can check to see if their next victim owns a gun.

Sorry the treaty has no such requirement merely that code be tested
for "by ear" and "by hand" the first of those requirements is NOT meet
by the US in the case of at least some of the Deaf. The FCC could have
with a big strech (like the ARRL's no test at all for HF CW access
idea) given a written test of some sort, or 1 char per sec test one
sec long, answer is known in advance if they had pleased. Thier are
reasons to keep 5PM as much as I would have liked to see the FCC
eliminate the requiremnt in practical terms as these sugestion would
have done. But I not am really surprised by what the FCC did

Indeed I belief Ed Metzger my director is wrong in suporting
Code requirements but I do firmly believe that the idea of as much
Code requirement as is politicaly possible is ARRL policy. It is
different from trying to Go down with the ship (all of the ARS) on the
issue of code, but it remians in favor of code testing requirement

Wrong. It's true that there is a leap year every four years with the
following exception:

"A leap year is any given year divisible by 4, unless it is a century
year, which much be divisible by 400 to be a leap year. Thus, 1900
was not a leap year, but 2000 will be."

(From DMA's "American Practical Navigator," also know as "Bowditch")

That's an interesting idea. But it really sounds like an
Internet war against gun owners. Exposing gun owners on
the Internet would only be a form of harassment. Your
recognition reason is nothing but an excuse. Be
careful because war can work both ways. For example, what if
someone happened to cross post this to some pro-gun newsgroups?
I'll bet your mailbox would fill up real fast, or maybe
you would even get a visit from some local folks. I think
you will agree after reading this that Internet harassment
is a bad idea no matter which side does it...

No, the fines go into the general fund and are not allocated to support
FCC activities. Wish they were. Even more significant is the $billion/yr
the FCC gets in station licenses and frequency auctions also is gone and
not used to support the FCC. This may be an area where a few thousand
letters might help. Let the FCC keep some of its "earnings".

Lloyd should search for the website "John Banner knows the Truth."
It deifies Mr. Banner's lovable character Sgt. Schultz, and should
agree with Davies, since he certainly knows, NOTHING, NOTH- ING....!
LOL!

To let WB2OTK back on ham radio to qrm, make racist remarks, cuss, gravedance, belittle authority, lie, cheat other amateurs, organize his group of brigands again, and go right back doing what he did that caused his problems to begin with, would be criminal. He must clear his troubles up with the FCC first, then change completely from what he did while he was a active amateur. Where does Bob Sherrin get off being a shill for the return of WB2OTK, a radio criminal of the first order. Bob mentioned his putting his high powered amateur radio station back on. Maybe he wants payback for shilling, in the form of advise on very high over powered amateur radio activity from OTK!!

Let's see what's wrong with this statement......

First, you make an assumption that those of us that do not hold CW up to
the same reverance as you do, are somehow "idiots". Then you make an
even more radical ASSUMPTION, that these same people are going to
somehow ruin ham radio.

Based on what? Where is your proof?

You are exactly the type of close minded ham radio bigot, that I was
refering to.

If you can't keep to the issues without letting your runaway emotion
cloud whatever logic you may posses, then you'll never progress beyond
your initial prejudice.

Dave

> Code requirement as is politicaly possible is ARRL policy.

That is exactly what the ARRL's "compromise" proposal was ...
as many classes of license and as much code as they thought
stood a snowball's chance in hell of getting throught the FCC.

They guessed wrong.

The R&O almost exactly reflects the NCI proposal (T/G/E, 0/5/5),
with the only thing of any note that we asked for that we didn't get
being the "sunset clause" and that's not that big a deal since it wouldn't
have "kicked in" until after the WRC deletes S25.5

> It is different from trying to Go down with the ship (all of the ARS) on
the
> issue of code, but it remians in favor of code testing requirement

That is why I stated in a recent post that this is a (somewhat) different
ARRL than existed at the time we lost 220-222 MHz. That ARRL
took an "over our dead bodies" attitude with the FCC and we all
paid for it. I'm glad the current ARRL BoD is a bit more flexible.

> Then, how do you explain the loss of part of 220 MHz?

I did ... that amateur community in general and the ARRL in
particular had been particularly intransigent WRT the FCC's
proposal for a nocode license.

I was told quite directly by the then Chief of the Private
Radio Bureau (who I was well-acquainted with, broke
bread with and met with when I was in Washington,
etc.) that the loss of 220-222 was meant as a "wake up
call" to the ARRL and the ARS to "get with the program"
and that had the ARRL not taken an "over our dead bodies"
attitude towards progress and the FCC's proposal for a
nocode license at that time we wouldn't have lost the spectrum.

> There was no "public
> interest" served, only the private interests of two corporations: UPS and
> Motorola.

That's ridiculous, since neither UPS nor Motorola got the spectrum
and Mototola is not, to the best of my knowledge, a producer of
the narrowband gear used in that band.

The public interest WAS served in the sense that a new SMR service
was established there by folks who WOULD AND DID use new
technology to improve spectrum efficiency ... whereas the rest of
mobile radio was using FM and 25 kHz channel spacings, this band
requires 5 kHz channel spacing, which in turn requires more advanced
modulation techniques which provide better spectral efficiency.
(Additionally, our use of 220 was dismal and still is, but we still would
probably not lost the spectrum were it not for intransigence.)

NOW, don't get me wrong .... I am NOT celebrating the loss of
220-222 ... I was angry about it too and the FCC could have found
2 MHz somewhere else nearby to reallocate. But I was actually more
pissed off at the ARRL than the FCC on that one. They (ARRL) did
it to us even more than the FCC.

However, this is a different year, a different FCC, and even, surprisingly,
a (somewhat) different ARRL it seems.

Art ... the only "vanity" in the above post to which you responded
is the writer's obvious desire to "place the mark of Cain" on all
new hams licensed or upgraded under the new Rules.

Hopefully this sort of bigotry will die out with those who practice
it and not be passed on to future generations of hams ...

560. Need info on old Hy-Gain vertical

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-03 00:00:00 UTC
From: Jim Taylor <jtaylor1@win.bright.net>
Message-ID: <3870BB3E.AD0CE3F1@win.bright.net>
Source record: 123377
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

I recently acquired an older Hy-Gain trap vertical antenna.
Unfortunately, it didn't come with any documentation, and I'm not quite
sure that it is even complete.

It appears to be a 4 band (40, 20, 15 & 10) trap vertical - 3 traps,
marked 20, 15 and 10. The traps are tapered.

I'm not sure if there should be anything above the 20M trap, besides the
two telescoped pieces of aluminum tubing. Right now, there isn't even
an end cap. If there are supposed to be any other parts, I will need to
fabricate them.

I would appreciate it if someone could let me know what I might need to
do to make this antenna air-worthy. It would be wonderful if I could
get a copy of the original documentation, or at least information on the
proper dimensions, etc.

Thanks,

Jim Taylor

That is about the dumbest statement I have ever heard. You obviously
don't know very many Texans, as a Texan myself, most of the ones I know
have more brains than that. A lot of good your principles do you if your
dead. Your the type of idiot that sees an 18 wheeler about to run a red
light, but you pull out any way because you have the green light and
your have right-of-way. So the truck driver was wrong, you were right
and dead.

A man was in the hospital for a series of tests, the last
of which had left his stomach upset. Upon making several
false-alarm trips to the bathroom he decided the latest was
another and stayed put. He suddenly filled his bed with
diarrhea shit and was embarrassed beyond his ability
to remain rational. Losing his presence of mind, he jumped up,
gathered up the bed sheets, and threw them out the hospital window.

A drunk was walking by the hospital when the sheets landed on
him. He started yelling, cursing, and swinging his arms wildly,
which left the crap-laden sheets in a tangled pile at his feet.

As the drunk stood there staring down at the crap-smeared sheets
the guard who had watched the whole incident walked up and
asked, "What the hell was that all about?"

Still staring down, the drunk replied: "I think I just beat
the shit out of a BARFIE or a KKKlansman!"

You know perfectly well that is not what I said. I NEVER said there was
"no way out". "No way out" are your words, not mine, and I resent your
attempt at mind fornication. There's a good chance I can disarm the average
criminal. For a 6'3" 200 lb. physically and mentally trained armed individual,
there is almost always the chance of a way out without losing one's life *or*
property. If one doesn't take that risk, there is still a high probability
of losing *both* one's property *and* life. If the criminal realizes that
it is his life that is at high risk, he might just change his mind.

However, the *risk* of losing one's life certainly exists and my statement
indicates that I am willing to take that risk. And yes, my principles are
more important than my life just as they are for military heroes who gave
their lives defending their country.

There's lots of evidence that women who fight their rapist have a much
easier recovery task than women who simply submit to their rapist. The
same is true for people who resist criminals Vs submitting. Risking my
life is worth the rewards. After all, I risk my life every time I ride
my Harley.

Let's take a solid example. If you had your pistol pointed at the head
of a criminal who had his pistol pointed at your head, would you give
up your pistol because he commanded you to? That scenario separates the
men from the boys. IMO, you are less likely to die by NOT backing down.

You know what I don't understand about these "white racists"?
Everything !!. I'll bet if this guy, and his "buds" were around when
the third Reich was busy doing "its thing". They would have been one
of the first on the cattle cars. And why is that you ask Llllloyd?
Because Adolph and the boys wouldnt tolerate "crazy" people. And I
assure you, you qualify.

Since this is a AMATEUR RADIO NEWSGROUP I would like to address a small
portion of this "tripe". How is it you figure the "gasbag extra's"
kept YOU off of HF. It not my fault you are a ignorant, lazy, pompous
ass. That is your problem, not mine.

It is a honor to be named "HAM OF THE YEAR" by all of my fellow hams on the 20 meter band. I would like to say thanks to all for allowing me to be part of amateur radio history. During the year I exposed the facts about wb2otk , and take pride in exposing the jail bird from Tampa, KE4TEW. May all of my fellow STUMPJUMPERS , have a great 2000. KT4TR. AF2Y should be ashamed of himself. The" CLOUDQUARMER" is dead.

Racist Lloyd wants to own slaves. He thinks it makes him a man.
The South didn't have the infrastructure to needed to win in the Civil
War. Lloyd's archaic 19th century mindset is quite unAmerican. Lloyd
was born many years after the Confederate Staes of America ceased to
exist. It's amazing, that here we are, in the 21st century and some
people haven't learned a thing.

>> For many years now, old gas-bag extra class hams have kept us no->>
coders from having to get on HF. We will use to >>our advantage.?????

No, Lloyd, your STUPIDITY has kept you from the HF bands.

You know what I don't understand about these "white racists"?
Everything !!. I'll bet if this guy, and his "buds" were around when
the third Reich was busy doing "its thing". They would have been one
of the first on the cattle cars. And why is that you ask Llllloyd?
Because Adolph and the boys wouldnt tolerate "crazy" people. And I
assure you, you qualify.

I know some of you are going to be really confused, and perhaps a little hurt
by the following information, but I can't live a lie any longer. Despite the
fact that I am well known as an advocate of conservative politics, I am in
actuality a Gay Jewish man who has lived in fear of discovery for many years. I
know that Liberty Net harbors many other individuals who have also grown tired
of hiding their true feelings about other men and Judaism, and I suggest that
they take this opportunity to "come out" as well. I know that a fair number of
you have been sexually attracted to me in the past, and I ask you now to shed
the tissue of lies that have kept us apart. If you're well hung, under 50, and
willing to cut loose with an older father figure type with no sense of
humor,please get in touch ASAP.

Thanks,

Your Vicky

Back when they were taking comments, I posted to this newsgroup
the web site or e-mail (forgot which it was) that was the interface
for submitting comments. I submitted mine (a short one, a few lines
at most) and my name shows in that list in the R&O.

That's about it, as I understand it. If you got your tech+ before 1987,
you would be credited for the General theory, but you'll need to show
them the expired license from when you first got it. Or a callbook
entry with your call and name.

OOze back under your rock, Squiggy, you had nothing to do with this. In fact they're still smirking about that belligerant weirdo who made the Ex Farte Presentation. THIS deal was purely a "convenience of the FCC" action to get them off the hook on the medical code waivers, and nothing more. Simlifies *their* lives, regardless of what it does to the ARS.
That is, it simplifies their lives for NOW......

Your bullshit is just bullshit.

579. How about a new HF mode: digital voice

Newsgroup: rec.radio.amateur.misc

From: wa2ise@netcom.com
Message-ID: <84p80viag1@nntp5.atl.mindspring.net>
Source record: 123430

How about a new HF mode: digital voice. Voice would be telephone quality (300-3000Hz), maybe 7 bits deep, then compressed. And then use methods similar to what NASA/JPL uses to communicate with deep space probes, maybe work the world with 1 watt. Make it so other modes only precieve a bit more white noise when interference happens.

Don't know if we could get it to work, so change something in the above to do it.

When I was in my junior year in college, had I *failed*
to reach my chartered goal of a college degree? Of course
not. I was exactly "on schedule" toward a college degree.

1. NCI (et al) just won the biggest battle of the war.
2. The war is not over yet but 2/3 of all federal subsidies
have been removed from the code requirement.
3. NCI's ultimate goal cannot be achieved until S25.5 is dropped.
4. NCI, if anything, is *ahead of schedule* toward their goal.
(I'm sure NCI thought, as I did, that the extra code requirement
would be retained at 12-13wpm.)
5. Given the boundary conditions, everything went NCI's way.

Here's the data, straight off
http://www.arrl.org/news/restructuring/faq.html:

5. What do I need for "documentary proof" of having held my Technician
license before March 21, 1987?

Obviously, if you have an original or a copy of your Technician
license issued anytime prior to March 21, 1987, that would suffice.
Other documentary evidence could include an original CSCE for
Element 3 issued prior to that date; an FCC verification letter of
having held a Technician license prior to March 21, 1987; a document
from the FCC's contractor, ITS Inc; or possibly a Callbook listing dated
prior to March 21, 1987, indicating your license class as Technician

Hello Lloyd.
Been watching the goings on in the newsgroup. Roger
seems to be getting bolder. Here are a few pictures of Rogers house----a
crackerbox if I ever saw one.
Note: If you enlarge the photo on the window to the right under the awning
in photo 5 tiff, you can see an image of Roger. I swear to GOD and on a
stack of bibles that I did not do any retouching on this photo. All I did
was adjust the curves to bring out any detail in the shadow areas.. As you
can see, Roger is shall I say without being cruel----deformed. His head is
extremely elongated and he looks to have some sort of birth defect. Again,
I will reiterate.......I did not put this image in this window. You have to
look real hard, but it is there .
No wonder Roger did not want to come out of his house to meet me. I feel
kind of sorry for him because I know know why he is so mad at the world.

I assume you mean the 5 WPM requirement. If there was one thing just about everyone here agreed upon, and the one thing that the majority of respondents to the NPRM argued for, it was the 5 WPM General requirement. How do you figure that NCI should get to claim that as a victory?

Were you "victorious" at that point in achieving your chartered goal?
To claim victory in achieving your college degree while still a junior
in high school would have been premature, doncha think? If not an
abject failure at this point, Carl's claim of victory is at the least,
premature and unwarranted.

Those who were truly interested in the outcome commented. The rest
are now sitting around bitching, whining, and carping. (to no avail)

A 5 wpm General alone is far short of "5 wpm across the board
for FULL HF access."

Given the treaty requirement, that was the best we could hope
for at this juncture and we got it.

Heard on the 10-70 machine in Bergen County, NJ this afternoon

op1: boy is this great, something to use my 706 other than CB

op2: roger d the 706, btw does yours get as hot as mine on channel 19

op1: you must be pushing to many swr's thru it. I suggest we get on 20
meters and then we can talk to each other on the way to work

op2: wow that would be great. Do you think we can dx with Austrailians
as we drive in the morning?

op1: sure, they have licenses? Besides, they'll be driving to work just
like we are. Hey..manybe we can get onto a drive to work net and talk
all over the world to others commuting?

op2: btw, how my hitting the machine this afternoon, I just adjusted the
mike gain

op1: a solid 9 pounder, but your audio sounds ok

op2: great because I can see the repeater tower and I was afraid my brick
wasn't working. This having 100 watts is great, no problem hitting the

machine.

at this point, I crossed over to the Bronx and switched to another
frequency to pick up traffic on Long Island. Needless to say, this is
not the 1st conversation of this type heard, from what is being discussed
locally. Your mileage may differ, just the results will be the same

My predication...a great influx of HF users. After the 2nd year, a great
outflux of ex users and the great sell off of equipment. Those that
found that yakking on 10 and 20 meters isn;t all that it was thought to
be will
bail, just like they did on VHF/UHF. Those that are left will be the die
hard dx'ers and contesters. Anyone working the DEE EXXX..your calls
please...2's only

This may be great in the short, but not in the long run.....same-o same-o
and then
the NTA (no test advocates) will be out in force. NO TEST
International..that's the ticket

BTW..hey John prices on new stuff will NOT be going down. According to
previous
economic scenerios, prices will be going up, if any movement at all,
because
of the anticipated influx of new buyers. You are deluding yourself if
you think that the manufacturers, after surviving monetary famine, are
going to drop their drawers some more because of the influx of potential
customers. It doesn't work that way in the real world. Besides, you and
Mark Morgan have already stated you'd never do 5 wpm code anyway, so why
the great celebration. W2xxx has already stated on 40 the other day that
you already complaining about the 5 wpm requirement to the complete
disgust of the clubs members. Is that true?? Are you stating victory
from one face and whining and crying with the other??

Hans,

Why wait for the FCC to take such action? Just turn in your vanity
callsign now and ask the FCC to assign one to you from the amateur
radio callsign "pool". Show us what a good egalitarian you are.

If you, and others, attach some sort of prestige to vanity callsigns
then it is in your minds only and does not exist in reality.

Personally I'm impressed with the imagination some folks have when I
hear their calls. I remember seeing a vanity callsign and wondering
why the person applied for it until I heard it in a contest. It just
stuck out in the contest and it was easy to remember so I didn't try
to work him a second time.

Aaron,

I think we may have reached some points of agreement - if something is
legal, then it should not be prohibited. On the other hand, there are a
lot of things that are legal that are not particularly desirable.
(Pornography in church, obnoxious behavior...etc) I am advocating that
ham radio operators remain immersed in the technology, but this is not
the same thing as trying to squelch other types of operations. As to
"10-codes", "roger beeps", false southern accents or other such
stylistic mannerisms - well, those are a matter of culture and mindset

more than regulation. In my view, these things belong more to other radio services than to the amateur radio bands, but that's just my opinion. Personally, I'd like to see our hobby be more genteel than boorish. I believe that an emphasis on the technical aspects of radio tends to facilitate this. It's just one of many things that separates the ARS from CB. No "snubs" intended.

If we were all in this just to be able to communicate with one another, we could all just stay on the internet and type madly at each other instead of dealing with the relatively noisy and unreliable radio medium...

My other loves in my later teen years (1972-1976) were my 1968 GTO, my 1969 Chevelle SS 396 and my 1968 Chevy Camaro 427 (in chronological order). You're right -- they worked a lot better for attracting (and comsummating) dates than the home-brew hamshack!

The reason doesn't matter. NCI got what they wanted. That's
why they are celebrating. If you had gotten what you wanted,
you would be celebrating.

>(Pornography in church, obnoxious behavior...etc)

You'll notice I said if it is legal it is *probably* OK. In the 50's most hams felt that the taboo subjects were politics, sex, and religion, and you seldom heard them discussed on the air. It made for a more family rated hobby. But heck, now days the FCC apparently issues body parts and body functions for vanity calls, so some traditions are long gone...

>Personally, I'd like to see our hobby be more genteel

I think 95%+ of ham contacts are still in that category. The sore thumbs will always stick out.

>I believe that an emphasis on the technical aspects of radio
>tends to facilitate this.

You mean because when their building stuff, they aren't on the air causing problems? How would technical knowledge be related to manners? Just follow some of the techno-whiz engineers who post here, and you might change your mind...

>If we were all in this just to be able to communicate with one another,
>we could all just stay on the internet

I use mobile CW to while away the time on my cross country trips. Nothing on the net can replace that, otherwise...

Aaron,

Yes, I do consider experience with home-brew tube gear to be "technical expertise" (perhaps not modern technical expertise, but technical non the less...). Building the gear was a great experience, and the effort helped me to appreciate the a lot of the issues involved in moving the theoretical aspects of circuit design into practice. The resulting gear puts out a good signal and does a pretty fair job of receiving as well. Are you a VLSI/SMT chauvinist?

No, I'm not a member of the "thought police"... On the contrary - I am a strong advocate of intellectual freedom. I merely propose that by encouraging an understanding of radio technology, we will help to preserve the richness of the amateur radio experience. If there is no nurturing environment for new amateurs to learn about the amazing reasons why radio signals behave as they do, then we all will have lost something - namely, new radio enthusiasts. I wonder, what brought you to amateur radio initially? Wasn't there some element of the awe and wonder of how radios and antennas work? Don't you remember how it felt when you made your first long-range (relative term) contact and then thought about the process that made it possible?

I'm not saying that there isn't room for people who just want to get involved in round-table discussions, check into regular nets or work DX

contests without regard for the how and why of it, but I think that there should always be a technical flavor to the hobby. In my view, this is what sets amateur radio apart from other public uses of radio (CB, FRS, GMRS...etc).

-- And yes, when I play with my packet gear I am being an "appliance operator". On the other hand, I try to appreciate and understand the way it works.

With a mentality that actually enjoys such "art," it is hardly
surprising that he soils the newsgroup as he does, or that he
associates with the likes of Morris Dees and the ADL.

With every good wish,

Kevin, WB4AIO.

as far as I can tell it (The internet)has already turned into an unreliable cesspool.Half the "Information" is outright false and the other half you just aren't sure about!
I agree that the fun in radio is the unexpected opening of bands and getting that special contact.
I have never nor will be a "Ham" ,but I have been DXing for 20 of my 35 years and I still have to rely on the weather and propogation to get some unique loggings.

> Gee, I wonder if WE1FAR is taken.
>
> don p KK6DP, ARRL VE, LA County DCS, "Welfare Extra To Be"

WE1FAR is available. Might as well jump on the "Rent-A-Call" bandwagon
too!

Piero - N3FVG
Current Extra (20 wpm), ARRL & W5YI VE & VEC

Phonetic Alphabets (Alpha Bravo etc)
January 2000

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic/radio/
spelling/telephone alphabets, and the term analogy alphabet
is also used. This collection currently includes alphabets
for the following languages:

English, French, German, Dutch, Flemish, Spanish,
Portuguese, Italian, Romansh, Danish, Norwegian,
Swedish, Finnish, Czech, Slovak, Polish, Hungarian,
Croatian, Serbo-Croat, Greek, Romanian, Turkish,
Hebrew, Russian, Ukrainian, Swahili, Kwanyama, Ndonga,
Afrikaans, Chinese and Esperanto.

This posting supersedes the one of 27 April 1999. New this
time: Unaone Bissotwo, and further alphabets for Spanish,
Italian and Turkish.

My thanks to the many contributors, not all of whom are
acknowledged below. Particular thanks to Gwillim Law
gwil@mindspring.com for numerous contributions and for
looking after posting for a while.

Please report any errors. I will be glad to receive new
material; further references; anecdotes; whatever.

A Web copy of this article, together with some further
material, can be found at:

<http://www.cl.cam.ac.uk/users/bck1/menu.html>

There is also a copy of the article at:

<http://www.columbia.edu/~fuat/cuarc/phonetic.html>

Also, but not currently up to date:

<ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/phonetic-alph/full>
<ftp://ftp.cs.ruu.nl/pub/NEWS.ANSWERS/radio/phonetic-alph/full>

Editorial comments are in square brackets.

Brian Kelk bck1@cl.cam.ac.uk

***** ENGLISH *****

The NATO phonetic alphabet:

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

[This alphabet dates from about 1955 and is approved by the
International Civil Aviation Organization, the FAA and the
International Telecommunication Union; note that different
bodies prefer different spellings, so one also sees:
Alfa Juliett Juliette Oskar Viktor]

[The alphabet above is from the Cambridge Encyclopedia of
Language. An alphabet with Alfa X-ray can be found in The
U.S. Department of Defense Dictionary of Military Terms.
Alfa Juliett X-ray, which is the ICAO version, appears in
A Concise Dictionary Of Slang And Unconventional English
and also two Langenscheidt dictionaries]

[UK police use Indigo(???) instead of India.
German army handbook 90/91: Alfa Foxtrott Juliett.
Italian version: Alfa Charly FoxTrot Giuliet Romio Wiskey.
An Indonesian phrase book: Beta Ultra Volvo Whisky X-ray.
A precursor of the present alphabet (1952?) had: Alfa Coca
Metro Nectar Siera Union Whisky Extra]

Phonetics for digits (from an amateur radio FAQ):

zero one two tree fower fife six seven eight niner

From the Cambridge Encyclopedia of Language:

zero wun too tree fower fife six seven ait niner

Atlantic City ITU convention 1947:

Nadazero NAH-DAH-ZAY-ROH
Unaone OO-NAH-WUN
Bissotwo BEES-SOH-TOO
Terrathree TAY-RAH-TREE
Kartefour KAR-TAY-FOWER
Pantafive PAN-TAH-FIVE
Soxisix SOK-SEE-SIX
Setteseven SAY-TAY-SEVEN
Oktoeight OK-TOH-AIT
Novenine NO-VAY-NINER

'Telecom B':

[Note similarity to Apples Butter Charlie]

Alfred Benjamin Charles David Edward Frederick George Harry
Isaac Jack King London Mary Nellie Oliver Peter Queen Robert
Samuel Tommy Uncle Victor William Xray Yellow Zebra

[Found also in Swedish, Dutch, Hungarian telephone directories. An 'analogy alphabet' in a Kenyan directory has Charlie and no Y. A Swiss directory: Andrew Charlie Lussy Queenie Sugar. French/German vocabulary books: Andrew Charlie Lucy Mike Nelly Sugar Xmas. English phrase books for Spanish/Italian speakers: Charlie. A 'British English' alphabet in a Langenscheidt dictionary: Andrew Charlie Lucy Queenie Sugar Xmas. Norwegian dictionary: Andrew Charlie Lucy Sugar Victory Xerxes. Collins Polish dictionary: Andrew Charlie Lucy Sugar Xmas]

[Used as an English alphabet by telephone operators in Israel]

'British A':

Amsterdam Baltimore Casablanca Denmark Edison Florida Gallipoli Havana Italia Jerusalem Kilogramme Liverpool Madagascar New_York Oslo Paris Quebec Roma Santiago Tripoli Uppsala Valencia Washington Xantippe Yokohama Zurich

[An 'international' alphabet in a Dutch telephone directory has: Danemark. A 'French' alphabet in a Hungarian directory has: Cassablanka Danemark Que'bec Upsala Zu"rich.
An 'international' alphabet in a business book for French has: Italy Kilogram Zu"rich; the corresponding book for German has: Italy Kilogram Xanthippe Zu"rich.
An 'international' alphabet in a Langenscheidt dictionary: Danemark Madagaskar Que'bec Upsala Xanthippe Zu"rich.
An 'international' alphabet in a Larousse business book: Danemark Je'rusalem Que'bec Xanthippe]

[West Berlin telephone directory 1965: Danemark Je'rusalem Madagaskar Que'bec Upsala Xanthippe Zu"rich.
Santa Fe (Argentina) 1955: Dinamarca Habana Jerusale'n Kilogramo Nueva_York N~andubay Upsala Wa'shington Xantipo Yokoama.
Azores 1966: Danemark Ita'lia Jerusale'm New-York Que'bec Upsala Yokoham]

[Used as a French alphabet by telephone operators in Israel]

Bombay telephone directory 1962 (also a later source):

Army Brother Cinema Doctor English Father Gold Hotel India Jam King Lady Mother Navy Orange Paper Queen Raja Sister Table Uncle Victory Water X-ray Yellow Zero

Kenyan and Tanzanian telephone directories 1966:

Africa Bombay Charlie Durban England Freddie George Harry India Japan Kenya London Mombasa Nairobi Orange Peter Queen Robert Sugar Tanga Uganda Victory William X-Ray Yellow Zanzibar

Johannesburg telephone directory 1965:

[Note similarity to Alfred Benjamin]

Arthur Betty Charlie David Edward Frederick George Harry
Isaac Jane Kate Lucy Mary Nellie Olive Peter Queen Robert
Simon Thomas Union Violet William X-Ray York Zero

Malayan telephone directory 1964:

Australia Bombay China Denmark England Fiji Ghana Hongkong
India Japan Kedah London Malacca Norway Osaka Penang
Queensland Russia Singapore Turkey Uganda Victoria Wales
X'Ray Yokohama Zanzibar

Used by police in New York City:

[Note similarity to ARRL and Western Union]

Adam Boy Charlie David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Peter Queen Robert Sam Tom
Union Victor William X-ray Young Zebra

[Variants: Eddie Larry Nancy Thomas Yankee Yellow]

Used by police in Nassau County, Long Island, New York:

Adam Boston Chicago Denver Edward Frank George Henry Ida
John King Lincoln Mary Nancy Ocean Peter Queen Robert Sam
Thomas Union Victor William X-ray Young Zebra

Used by police in San Diego, California:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Queen Robert Sam Tom Unit
Victor William Xray Yellow Zebra

Used by police in Hutchinson, Kansas:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Q.. Robert Sam Tom Union
Victor William X-ray Yankee Zebra

Alternative phonetics sometimes used unofficially in amateur
radio:

America Boston Canada Denmark England France Germany
Honolulu Japan Kilowatt London Mexico Norway Ontario/Ocean
Pacific Radio Santiago/Spain Tokyo United Victoria
Washington Yokohama Zanzibar

[Also: Amsterdam, Baltimore, Brazil, Chile, Egypt, Finland,
Geneva, Greece, Guatemala, Hawaii, Italy, Kentucky, King,
Luxembourg, Montreal, Nicaragua, Portugal, Romania, Russia,
Sweden, Texas, Uruguay, Venezuela]

The ARRL (American Radio Relay League) alphabet (1948):

[Note similarity to Western Union and Able Baker]

Adam Baker Charlie David Edward Frank George Henry Ida John king Lewis Mary Nancy Otto Peter queen Robert Susan Thomas union Victor William x-ray young zebra

[Nowadays the ARRL endorses the NATO/ICAO/ITU alphabet]

Pre-1954 U.S. Navy Radio Alphabet:

(Communications Handbook, 1945)

[Note similarity to Able Buy Cast]

Able Baker Charlie Dog Easy Fox George How Item Jig King Love Mike Nan Oboe Peter Queen Roger Sugar Tare Uncle Victor William X-ray Yoke Zebra

[formerly used by IBM engineers for hex digits and pin positions]

Same alphabet:

- British forces 1952
- "Used by Armed services of USA & GB" (ARRL Handbook, 1945)
- "The Complete Morse Instructor..." (1944)

'Allied Services 1945': Edward Tape

RAF 1943-56: Able-Afirm Item/Interrogatory Jig/Johnny Nab/Negat Peter/Prep

U.S. Army/Navy 1941: Sail

[In similar alphabets: affirm, cast, hypo, inter, negat, option, over, prep]

RAF 1942-43:

Apple Beer Charlie Dog Edward Freddy George Harry In Jug/Johnny King Love Mother Nuts Orange Peter Queen Roger/Robert Suga Tommy Uncle Vic William X-ray Yoke/Yorker Zebra

[cf. aircraft in Dambusters raid: A-Apple B-Baker C-Charlie E-Easy F-Freddie G-George H-Harry J-Johnny K-King L-Leather (officially L-London) M-Mother N-Nuts O-Orange P-Popsie S-Sugar T-Tommy W-Willie Y-York Z-Zebra]

U.S. Navy 1940:

Affirmative Baker Cast Dog Easy Fox George Hypo Interrogatory Jig King Love Mike Negative Option Preparatory Queen Roger Sail Tare Unit Victor William Xray Yoke Zed

Western Union:

Adams Boston Chicago Denver Easy Frank George Henry Ida John
King Lincoln Mary New_York Ocean Peter Queen Roger Sugar
Thomas Union Victor William X-ray Young Zero

British Army 1927:

Ack Beer Charlie Don Edward Freddy George Harry Ink Johnnie
King London Monkey Nuts Orange Pip Queen Robert Sugar Toc
Uncle Vic William X-ray Yorker Zebra

RAF 1924-42:

Ac Beer Charlie Don Edward Freddie George Harry Ink Johnnie
King London Monkey Nuts Orange Pip Queen Robert Sugar Toc
Uncle Vic William X-ray Yorker Zebra

Royal Navy 1917:

Apples Butter Charlie Duff Edward Freddy George Harry Ink
Johnnie King London Monkey Nuts Orange Pudding Queenie
Robert Sugar Tommy Uncle Vinegar Willie Xerxes Yellow Zebra

[Wrens at Bletchley Park: Apple James Kenneth(?) Oliver
Peter Quagger(??) Unicorn William Xray]

U.S. Army 1916:

Able Buy Cast Dock Easy Fox George Have Item Jig King Love
Mike Nap Opal Pup Quack Rush Sail Tape Unit Vice Watch X-ray
Yoke Zed

British forces 1904:

Ack Beer C D E F G H I J K L Emma N O Pip Q R Esses Toc U
Vic W X Y Z

[The OED has a reference for Beer and Emma dated 1891]

I agree with plscolla@erols.com, sound like a 14AVQ, close cousin of the 18AVT (W)(WB)(10 to 80 Meters), if not maybe a 14BTV.

Yes, fill out FCC Form 605 and pay the VE group their processing fee.
If licensed on or after 1987, you will need to take the portion of the
General Exam (3B?) and of course pass it successfully. If licensed
before 1987, then you need an original copy, and I would also have a
photo copy, of your license before 1987 or a certified document from the
FCC ($35.00) providing your license history. VECs to my knowledge are
not suppose to use a old call books as they are not a government
document proving you were the holder of that license.

Are you a police officer, or are you just buying whatever the news media
say?

> Instead of crime rates actually falling, I think cities are just not
> reporting crimes, or reporting the crimes as less serious offenses.
> Perhaps they are doing this in an effort to attract people to the
> cities. Or perhaps they are doing it to show that all their new
> "anti-crime" laws are working. Or perhaps even the police officers
> themselves are doing it to prove how well their department is doing its
job.

Those are faint but real possibilities. Philadelphia is one city that has
been "caught" underreporting crime to the FBI. However, the laundry list
above also sounds like conspiracy theorizing. What do YOU think is
happening, and why? (It might be better to continue a criminal justice
discussion in email, since this really has nothing to do with radio scanning
or ham radio.)

> This is likely caused by many larger cities simply not pressing charges
> if the suspect agrees to leave town.

Wow! Where did you come up with that accusation? Any evidence or facts to
back it up? Sounds like more media speculation.

> Whatever the case, I certainly don't feel any safer on the streets
> today than I did ten years ago. And, if I lived in a smaller town, I
> would be very concerned about some of the new people moving into town.

Most people don't, depite some provable numbers that show the general
impression to be mistaken. Again, people are being fed a lot of crap by the
media and have no real reason to disbelieve any of it, because actual study
and research involve some effort.

In other words, you overstate the case for victory. The only citation NCI can claim credit for in the R&O is the one in which the FCC took exception to NCI's idea - the sunset clause. They gave credit to others for the ideas they actually accepted and put into effect.

According to the NCI charter, abolishion of the code requirement is the movement which it spearheads. From the comments I read in the R&O, that objective does not seem to have be achieved. However it is correct doublespeak to call that a victory.

> We never expected to get more than this at this juncture.
> There was no way the FCC or State Department would
> go for "welshing" on the ITU Radio Regulations (S25.5).

They could have gone with a sunset clause - if they had felt that eliminating the code requirement was a good idea. It is not, so they did not include a sunset clause.

> However, when S25.5 goes the way of its cousin the
> Dodo Bird at the WRC in a couple of years, I believe
> you'll see the remaining 5wpm Morse test become extinct,

The FCC seems to have a very different view about that. They noted specifically that the IARU is not likely to endorse changes to S25.5, and that the issue is not likely even to come up at the next WARC.

> The ONLY reason the FCC cited for keeping ANY
> Morse testing now was the ITU obligation, which they
> felt was "unwaiverable."

Untrue. It is not the only reason. Read paragraph 25 again. They say it is because of the Radio Regulations *AND* because it "has been accepted as proving that the control operator of a station can ensure the proper operation of that station." Perhaps you overlooked that part.

The FCC stopped very short of endorsing NCI's view in many respects, opting instead to achieve more of a balance in testing by lessening the emphasis on code while recognizing both that it remains an operating privilege, and that testing requirements should continue to pertain to those privileges.

I imagine much of this "discussion" went on when the last major change in licensing
came about. The older guys might remember when "Incentive Licensing" (or as I've read
it referred to as "DIS-Incentive Licensing") was initiated. There was talk of the
downfall of Amateur Radio then.

I got my Extra in 1978. Yes at 20 wpm send and receive (for me the easy part),
taken at a FCC field office. And yes it took me four tries at the written, waiting 30 days in between as required at that time. (How many of you in 3 and 4 lands remember the dreaded Mrs. Woodlawn at the Baltimore office? WHEWWW!) I was DAMN PROUD when I finally passed. And how was I greeted by some of the older hams? While most congratulated me there were many who said
"Anybody can pass a multiple guess test! I had to answer questions in essay form and draw schematics!".

The more things change the more they stay the same.
The "smart ass" upgraded hams will eventually burn themselves out. Or at the least few
others will want to associate with them.

I will say the following though.....
At that time, study guides told you general areas to study for.
Not "Here are the questions, and these are the answers. Memorize them and pass".
In my opinion, the more work and commitment is involved to get something, the more
it's worth having.

From a technical standpoint, some of the things I've run into are scary!

A General or above (guessing because he was talking about working 20m phone) who not only
admitted to not knowing what the schematic symbol for a capacitor, or an actual capacitor
looked like, but was PROUD of it.

An Advanced asking "How big is a 50 ohm resistor".

An Extra being very proud that he managed to put on a type N connector.

A General saying his 4-400 amplifier "put out" over 2 kW because his watt meter pinned

on the 2 kW scale. When asked what his plate input was, he replied "100 watts".

Two guys on 40m phone, each had a different revision of the same Kenmore rig. The rigs had
a switch that on one said "FR ATTENUATOR", and on the other "RF PREAMP". Rather than
settle the argument of which it really was by looking at a schematic, they consulted the
grandest oracle of electronic knowledge..... the sales brochure.

You'll note that none of these are No-Code Techs. Perhaps fewer of their guffaws come
to memory because my allowance for their inexperience. My point is that the current
sad state of Amateur Radio is not ONLY due to the influx of "uneducated" hams.
Those of us who were there before them are also to blame for not showing them a good example.
We really need to take some of these "goofballs" under our wing. Teach them what they
don't know. Just as the many I can think of who did the same with me. For those who
decide to remain a "goofball" try to convince them that some other hobby might be
more suiting. Like collecting moss.

For those who may feel compelled to attack me....
I've loved radio for over half of my life. Through Amateur Radio I've managed to spend
much of that life doing something in radio. Many years in the two-way radio and paging business, and now in broadcast engineering. I've enjoyed operating and learning about many things. RTTY, Packet Radio, satellites, DXing, ragchewing, antennas, and much more. I've enjoyed being a volunteer examiner since it's inception. When a ham calls to ask if I would
fix his radio, I always respond "No. But I'll help YOU fix it". That way they learn something.

Thanks for the soapbox.....

I suspect that I enjoy quite a few more lucid hours during the average 24 hour day than you do, Cecil.

NCI's stated goal, the one which neither you nor I could endorse, continues to be the elimination of the code requirement. At this point, and for the foreseeable future that will not occur.

Are you asserting that it is a delusion to observe that they have failed to achieve their chartered goal?

Curt M. Breneman wrote
>Are you a VLSI/SMT chauvinist?

Nope. But if you can't build a modern radio, how is that different from a modern ham who also can't build a modern radio? If you use digital appliance equipment, how is that different from that new ham using his FM appliance equipment? There's no difference...

>No, I'm not a member of the "thought police"...

Glad to hear it. Then you shouldn't mind what subject is discussed as long as no rules are broken. 10 codes are OK. Gall bladder discussion is OK. Family communication is OK. Saying hi hi and using Q-codes on voice is alright. Some of the thought police here strongly disagree you know...

>I wonder, what brought you to amateur radio initially?

There were no computers (for teenagers) in 1957...

>Wasn't there some element of the awe and
>wonder of how radios and antennas work?

Yup. But I had more awe for my 49 Chevy with the straight pipes. It was just as much fun to work on, and had more uses that involved girls...

>I think that there should always be a technical flavor to the hobby.

And that is fine. The problem comes when some post what they think all other hams *should* be. Whether the snub is intended for the CW challenged or the technically challenged, it is still wrong. If it is legal, it is probably OK. It's that simple...

That isn't totally true.

It has been proven that you can put a graphic with a link in an email, and
have it go to any url that you want.

At that point, you can load any HTML or DHTML and have it execute arbitrary
code on the users machine.

> think it is cb radio) and could not care less.

that's the truth.
i still enjoy using my 706 [now a fresh new mk2g] to talk a couple
states away when i'm mobile. that's the most interesting part for me.
i do get tired of some of the local cb guys asking how much it cost.
where can they get one. does a power mic fit on it etc. and the
no radio guys asking me, 'do you think you have enough antennae on
that truck?' man if i could afford an outbacker, i cut the count
down alittle but now i have to stick with 4 tx and the factory rx
antenna.

on a note about cw, i think it's cool but i could never send any
if i had to use anything but the up/down buttons on the 706.
way too used to it by now.

as for low code/no code hams on hf, i've been making hf available
on my repeater for awhile now. always good operating procedures
and hasn't been a pain in the butt yet. hopefully now, they can
get their own rig and work hf when i'm not around to turn on the
remote base.

most of the higher classed hams in my area are stuck on 2m and
wouldn't know the difference if 20 new hams got on hf around
here.

Bob Poff cited some cases that would be funny if
they weren't.... well, maybe they *are* funny ;-).

My favorite has to be one I heard some time ago
on 40 meter phone, between a General
and a "just passed the Advanced last week."

General: "How's that new tribander- Did you get it up?"
Advanced: "Yeah, but I've had to take it down twice.
There's a problem with it."
General: "What on earth is wrong with it?"
Advanced: "Well the book says it's supposed to be 50 ohms,
but I put my ohm meter on it, and
it don't show no ohms at all!"

Oh my....
I really can't talk, though. When I had my General (1974)
I *could* build a transmitter that worked, but
I probably couldn't have told you exactly why it worked.
Learned some since then ;-).

Tim,

That is the stated goal of NCI ... on a global basis. Check out
the "mission statement" at:

http://www.nocode.org

don't forget to look over the info and articles on the Articles
page (click the "Articles" button on the main page)

Note the goal is to eliminate Morse proficiency as a requirement
for licenses, NOT to eliminate the use of Morse by those who choose
to use it, NOR to ban or restrict its use.

Read the R&O again ... you will find numerous citations to my
personal comments, those of Bob Vernal (an NCI director),
those of Bruce Perens (founder of NCI), the comments of
NCI, and the comments of many NCI members.

Besides, other than the sunset clause, which we didn't get,
the outcome is exactly what NCI proposed T/G/E, and 0/5/5.

We knew from the outset that the FCC would not ignore
the ITU Radio Regulations S25.5 ... what we got was the
what we asked for ... the best possible outcome under the
current circumstances.

I saw Bruce Perens name cited. Never heard of Bob Vernal, but I bet
he's a nice guy. I own some property near Vernal. ;-)

Please read what I said again, and provide footnote numbers for any
additional citations which mention NCI and which pertain to telegraphy
requirements. Thanks.

This is good. I can't wait to upgrade my 5wpm, General written (passed it once) and then get me a amp and antenna and it's "hellllllllooooooo radioooooooo" on 3950, 14.313 etc!

Indeed you have the matter corectly as far as power goes.
however the FCC Could (not that it was likely to) say something along
the lines of hf signals of less than X power power 100 or 200 watts?)
are unlikely to reach beyond the borders of the US or even then into
regions where English is not spoken, and therfore the rule does
notaply to US ham by say allowing the Techs the entry class clices the
curent privilges of the tech plus on a NoCode exam,and be very much
the same as the Japan license wrt the treaty. I was hoping/wishing,
without realy expecting them to do just that. But as I recall the
japan license and this scheme would simply be doen without taking
exception to the treaty, simply interperating it. The US could say
that we will not comply with the provision and go NoCode all the way.
There are GOOD reasonsnot to do as a matter of forgien policy, and
Indeed I would prefer that the US did not do so, because unlike a lot
of the ProCoders I do place the interest of the US as a whole above
those of the US ARS or myself, but we (the US) have that power

>>You know ass this but still so spout
>
>Could someone please translate that?

you can't read then But I will try again as Cecil has pionted
out to you CW does have an advange of progation (if you prfer that to
the word pentration) so if the numbers of operator were then more CW
op would be heard at a given location.

In adition to this often made piont you talk about the number
of CW QSO's as opposed the the number of SSB QSO's. given the
compact and brief nature of most CW QSO's a CW op is likely to crank
out more of them

I note you don't even bother to respond to the facts so I will
repat them
One not ture at all, depends on your gear, and the band. If I
turn acrros the Band I hear more AM QSO than anything else

Two Number of QSO is not the same as number of users. of
course there will be more QSO with rst exchange than with a chat.

Three they certainly did not poll me, however, this is beside
the point. It is true and correct statement that the ARRL claims that
CW is rarely to never by 70 some percent of hams, wether this is valid
reflection of the real is another matter.

Four, since you know that CW has some coraaing advatage over
SSB then you MUST discount the number by the right in order to find a
valid comparision .

You know this but still so spout such BS. a darn Shame

Hello,

I recently added a PREFIX look-up form on the QSL page. If you need to know where a prefix is from, simply enter the call or prefix and see what country it is assigned to.

You are invited to http://hfradio.org, a non-commercial site offering:

+ Azimuth Map / Equidistant Map Creation (choose any QTH as center, many options)

+ Propagational Resources (live, real-time reports, eAlert service (sign up for automatic email solar/geo reports, complete with Aurora index))

+ News, and DX information and reports

+ QSL Manager and Callsign Lookup center

+ Swap and Shop

+ FREE HOME PAGES THAT YOU CAN USE TO POST YOUR OWN HAM OR SWL SITE

+ Bookstore - SWL and Ham related books. Over a 1000 titles so far.

+ Plus more (Directories, etc.)

73!

Let me see if I got this correct......

The sender wants me to open a file.

The sender is unknown to me, and clearly indicates in his address that he is "bogus".

The sender does not allow incoming e-mail.

Should I do it? Naw.....think I'll pass. Old "Charlie" may have a STD........

Besides, anyone from "bogus.net" probably has very little accurate information about the FCC.

Not hypocritical at all, Ron. I've held this call for 25 years, but
I'd be first in line to turn it in if we could get rid of all this
phony "rank" that permeates the hobby these days.

If you want to outrank someone, go join the Army or the Girl Scouts.

I think you both are wrong. The blame needs to be placed here in
the amateur community. Not much impute from the ARS concerning the
changing of the ARS license system. The FCC read the impute given
them and realized that the 'majority' wanted to dumb down ham radio.

What a butt head message.... Only person/persons that have an
attitude is you. Why did you not learn the code and the theory and
get you Extra? Why did you wait for the FCC to hand it to you on a
plate? You are the one that seems to have an attitude.

I wholeheartedly agree also. I also got mine "the old fashioned way",
but the immature idiots prancing around cheering about having the FCC
hand them a license so that don't have to put a little effort into it is
ridiculous! Taking the written test these days is also a joke. Any moron
that can memorize the questions and answers out of the study guide can
get an Extra Class license, WITHOUT actually learning the theory, and I
have seen many, many people do just that.

>
> Now, if only the detractors will read -this- one

In an attempt to prevent loss of sales the big three (3)
Icom, Kenwood and Yeasu agreed that the new radios
produced this year will be more geared towards the
New License Class. Xtra Class CBer the features will include.

Super Bad Antenna Tuner will tune V5/8, Antrons, Wilsons,Jo-Gunns to any band
Memory Channel (1)=27.1850
10kc switch/Unlocked Clarifer
H/M/L power switch
Echo with voice disguiser.(For the 3.950 Crowd)
Roger Beep
Additional Slots for noise toys (No Filters)
Anolog Meter (SWANG)
Easy to read frequency chart A+16=14.313
Free subscription to Secret CB,Master Edition Tune Up Manual.
So even the newest ham can tweek and peak,
Let me see if I cut out the ALC on my 746, it will dead key 1watt
and swang 225, WHEW!!! got my 2950 beat by 3watts according to my dozy.
Oh I almost forgot. An extra antenna connection for my Wilson 1000
and the all important 610 included with the rig.

Ten-Tec is still undecided.
Just a little humor amongst all the turmoil.

73 all Donnie
N4JZH (General Class Operator) Legit!!

IMHO the "unreliable" aspect of ham radio is what makes it challenging
and fun. How much fun would working a distant country be over the
internet be, knowing full well that there's nothing to prevent it? What
would be the point?

The internet is TOO easy. Pretty soon it will become a cesspool of
sludge for every low-life, social deviate, that can't even get a date,
much less have a life outside of their homes. It will become
increasingly difficult to find meaningful, intelligent, and mature
people to communicate with. This may end up being the savior of ham

radio.

Those "snide" people are only retaliating against those of you (and you know who you are) that refuse to move into the 21st century and accept that code may not be the golden child anymore and that its worth is no longer needed with respect to license testing. And who have made it clear on any number of occasions that those that do not "do the code" are not "real" hams.

I'd say it's just a case of turnabout being fair play.

> I don't mean the sincere folks who come after
> and act like decent people- I mean specifically
> the CB-Plus guys who want to act like
> horse's asses.

And all the while when we've been rehashing this topic, the negative comments and purely subjective and emotional reasons that you dogmatically adhere to in defense of code toward those that promoted changes, didn't make *you* look like "horse's asses"?

> When they "rub it in,"
> remind them they're "Welfare Extras."

Careful, you might need one of those "Welfare Extras" to repair your rig someday. You wouldn't like it much if they left you a "surprise".....

Hmmm well it's sort of a free for all, he with the most noise making toys seems to win, roger beeps, echo boxes cranked to unintelligible levels, class C amplifiers creating distortion and splatter in the attempt to push your S-meter just a little higher than the other guy does. Contests called "keydowns" where groups try to see who can generate the strongest signal, many running in the kilowatt range.

> > where they accepted illegal power, illegal frequencies, and illegal equipment.
> > As I heard some truckers hauling gravel explain on 28.445 MHz, "I bought this

> Isn't that 27.445 mhz instead?

While 27.445 would certainly fall into whats commonly reffered to as the freeband and there are plenty of ops there, 28.445 is probably not a typo, Now that the bands are opening again I am also hearing SSB and AM converstaions well above 28 MHz that are clearly not amateur transmissions. Is it a surprize to anyone that many don't wish to engage in mods related to 10/11 m?

Makes an interesting point for the attitude found on CB, don't dare use your real name or let anyone know where you live else you risk retaliation by someone who may not agree with you. I've never had this problem on the amateur bands.

> As far as the trashing of the hobby, the eighty or some ninety years

> advancing this science and the cause of it can anyone help?
> thanks....Dan.

Dan, I had to travel more than fifty miles, to another state, when I took my ham license exam a few years ago - no other test session was planned in my immediate area during the time I needed to take the test. You should not have that problem in a city the size of Chicago.

Perhaps you don't understand the process. When a test session if given, it is usually a planned event sponsored by a radio club. At least three examiners have to be present to give the test - one person cannot do it alone.

A location for a test session has to be obtained several months in advance. A free location is preferred - which can be difficult to find.

Once a location is found, and the examiners have agreed on the schedule, the session has to be advertised. This has to be done well in advance to attract the largest number of people to the session.

With all this in mind, it should be obvious that the location of a test session is not going to be selected just to benefit you - one individual. You will have to travel to the session if you want the license - even if it is a little inconvenient for you.

You know, I have heard this crap for several years, but I have yet to hear of a single drop of evidence to back it up. Which congressmen are guilty of any of these things? Give us name, dates, circumstances, etc.

And one could also say "so what" to a few of these things. It is not a crime to have a business go bankrupt. A lot of people have bad credit for many different reasons (some ligitimate). And lawsuits are certainly not uncommon today.

As for the other stuff, again I would have to hear the facts before forming an opinion.

Sir, if your so intent on being a higher classed Ham why would you bring your former CB lingo to the ham bands when in fact you know in your heart it is not part of the program and will only cause problems?

Isn't it enough that some hams are irritated that the FCC has reduced the rules thus causing problems some within the amateur community ONLY in the minds of the sticklers for higher code speed requirements.

As you know, your ASAP will not happen until April 15 and later. Sir, I have been licensed since 1974 and have NEVER operated on an unauthorized frequency, used any language other than amateur radio lingo when operating on the frequencies I am authorized on . Although I am a senior citizen, I am NOT a nerd and don't live in a cocoon, but rules are rules and I do respect them as you should consider doing.

David Stinson isn't commenting against the change, he is actually all for it. He is just against the spineless jellyfishes (anonymous people, bad e-mail addresses, etc.), that are prancing around like they "deserve" this change. I see the same thing at the bank around the beginning of the month when all the Government leeches come in with their handouts.

Please quote the message where I
"dogmatically adhere to...defense of code."
You will find me on the side of the code speed reduction, sir.
I'm *for* most of these changes, even though I love code.
I'm -against- nasty attitudes displayed by spoiled children.

> Careful, you might need one of those "Welfare Extras"
> to repair your rig someday....

HO HO HA HA HA HEE HEE!!! What a JOKE!
I was fixing 'trons when you were still
swabbing "Zit-Away" on your nose, fella.
I repair my own stuff, thank you.
Even surface mount, if it isn't a large chip pack.
Ain't got the right tools for that.

I wouldn't trust 99% of these "bad attitude" guys I'm talking about
to know which end of a soldering iron gets hot.
Most of the new guys (and too darn many of the old guys!),
be they "good attitude" or "bad attitude,"
have trouble even using a meter, much less fixing their handhelds.
That's just a fact.
Some of them will go on to learn the craft. Most won't.
So I think I'll keep my test equipment handy, thanks.

Try to get some ammunition in your gun
if you're going to "pop off."

> past 10 or 11 years. What high crime
> rate are you worried about?

I have not seen that falling crime rate on the street. In fact, crime seems to be on the rise.

Instead of crime rates actually falling, I think cities are just not reporting crimes, or reporting the crimes as less serious offenses. Perhaps they are doing this in an effort to attract people to the cities. Or perhaps they are doing it to show that all their new "anti-crime" laws are working. Or perhaps even the police officers themselves are doing it to prove how well their department is doing its job.

Another factor that might be affecting this is the fact the criminals seem to be moving their operations to smaller cities. Many smaller towns around to country are starting to see sharp increases in crime. This is likely caused by many larger cities simply not pressing charges if the suspect agrees to leave town. Whatever the cause, as these people settle into their new locations, the crimes rate will start to climb again if this is indeed happening.

Whatever the case, I certainly don't feel any safer on the streets today than I did ten years ago. And, if I lived in a smaller town, I would be very concerned about some of the new people moving into town.

Exactly, there was a time when being able to communicate all over the world using your own shortwave equipment was a fascinating thing, today anyone can pull a cell phone out of their pocket and call almost anyone anywhere in the world. Most people don't ever know what ham radio is (or think it is cb radio) and could not care less.

Nothing in my remarks says that at all. If I am inclined to violate
the regs then the change hardly afects me before or after the R&O so
either I already have and can choose to use the band defacto now and
tomarrow or I have no legal access no or tomarrow, or both i any of
these cases NO "upgrade" takes place as a result of the R&O

One not ture at all, depends on your gear, and the band. If I
turn acrros the Band I hear more AM QSO than anything else

Two Number of QSO is not the same as number of users. of
course there will be more QSO with rst exchange than with a chat.

Three they certainly did not poll me, however, this is beside
the point. It is true and correct statement that the ARRL claims that
CW is rarely to never by 70 some percent of hams, wether this is valid
reflection of the real is another matter.

Four, since you know that CW has some coraaing advatage over
SSB then you MUST discount the number by the right in order to find a
valid comparision .

You know ass this but still so spout such BS. a darn Shame

Quite a few of my Tech+ friends from two meters are planning on
upgrading to General ASAP. After that, we're going to move our 2M net
down onto HF so that we can talk to even more of the former Tech+ hams
who have upgraded. Not only that, it should be easy to quickly go to
Extra class now that only a written exam is needed and Advanced class
licences will no longer be issued.

I'm going to be laughing in the faces of the Extras at our next club
meeting too. After years of their "attitudes", it is going to be loads
of fun watching them squirm. The more they whine, the more I will enjoy
it. Listening to the whining on here has been quite satisfying too,
because the elitists are getting what has been long, long overdue, and
they can't stand it.

Thank you FCC!!!

<<Riley, see what your employers did? Are they proud of allowing a pusbag like
the creep who's gloating to jump from a sinkhole to Extra is one easy test?
Don't you feel betrayed? You're doing all you can to refine while your
employers are doing everything they can do to muddy.>>

The conversion rules call for the pre-'87 license ONLY. The callbook won't cut it.

Hi,

Sounds like you have a 14AVQ Vertical. Mine is almost 30 years old
and still works great. Simple to put together. Send me an e-mail
address and I'll send you a copy of the documentation that came with
the 14AVQ.

I agree Lloyd, I think The "other" hams should be gloating, after all the only way most of these -no code techs- would *upgrade* is by the FCC lowering it's stands to let them in. Makes one wonder what he has to gloat about doesn't it.

I recently acquired an older Hy-Gain trap vertical antenna.
Unfortunately, it didn't come with any documentation, and I'm not quite
sure that it is even complete.

It appears to be a 4 band (40, 20, 15 & 10) trap vertical - 3 traps,
marked 20, 15 and 10. The traps are tapered.

I'm not sure if there should be anything above the 20M trap, besides the
two telescoped pieces of aluminum tubing. Right now, there isn't even
an end cap. If there are supposed to be any other parts, I will need to
fabricate them.

I would appreciate it if someone could let me know what I might need to
do to make this antenna air-worthy. It would be wonderful if I could
get a copy of the original documentation, or at least information on the
proper dimensions, etc.

Thanks,

Jim Taylor

> threatening its existance!!

Then it's all over but the shouting. Because both alternatives lead to the death of ham radio.

1) Too few hams = no political power = bands get taken away for lack of usage.

2) Easy test/no code = People who have no committment and who come and go at the drop of a hat, mostly going. No sense of membership in anything, no sense of anything at all.

How do you explain ham radio to others, in an age where you can chat with people all over the world in IRC? I can call CQ by opening an IRC channel for any interest I have, and see who responds. From anywhere in the world, really.

And hey, if IRC is too difficult, I can just load AOL Instant Messenger, and do a search for people who are on, for any interest. You show that to hams in the 1950's, and even then you'd see how many would switch to this.

If there's little effort, then there's no sense of pride or of belonging to a community. And you can kiss it all goodbye. People will just use AOL IM, not "unreliable" ham radio.

Only if we licensed hams recognize a 5 wpm Extra as an Extra. I recognize amateurs by their accomplishments. A Codeless Tech is still a Codeless Tech. If one passes the 20 wpm element, they are an Amateur Extra. If they don't, they aren't.

Chin up, old man. The new grade of instant hams will still shy away from the CW portion of the bands. I suspect that they won't be able to copy at 5 wpm, if at all.

Robert

I have a different suggestion. Let's just call them "jerks." Not only
is it descriptive, it avoids the possibility that someone might
misunderstand and think you are referring to the sincere folks. Even
better, it's economical: you can use the same term to refer to those
among the OTs who DO disparage the decent people. All in all, a nice
all-purpose term.

There's a difference between taking yourself too seriously and being
professional. People doing public service in the ARS, for example,
are being professional. They love what they do and do it gratis
because it's fun and worthwhile. I do volunteer TV production and I
am *very* serious and professional about it. But I'm not so serious
that I think I'm better or more elite or more "endowed" than someone
walking into my public-access studio for the first time. (I teach at
the studio, too.)

I love technology, radio & TV. I can afford to be professional even
in my hobbies, because I throw all of myself into everything I do
(doesn't mean spending all my money, just making the best of what I
do do.)
That doesn't require me to loudly compare penis sizes when someone
newer than me gets his ticket, though.

Come on guys lets just drop the subject . We can't change anything but maybe barking about it some of you guys feel better. Don't worry about the CBers they are CBers because they cannot pass the 5 wpm or they are just to lazy to pass it other wise they would have their ticket by now. Life is full of changes especially when it comes to our government. The government is full of changes and full of allot of other things is you know what I mean. Just get on with life and don't worry the other guys (CBers) they are not worth. If you are using the Key just keep on using it . Just my thoughts on this matter which is really about nothing.

IMHO, all the call for "mods," "freeband conversion," "opening for fire/police/whatever" is a sign of the new CB-Plus operators, who come to ham radio with a basic disregard for the rules, regs, and self-policing heritage of Amateur Radio. Instead, they carry the Outlaw mentality they learned on CB, where they accepted illegal power, illegal frequencies, and illegal equipment. As I heard some truckers hauling gravel explain on 28.445 MHz, "I bought this radio, and I intend to use it." Never mind that its illegal, they just don't care. I don't think they can see the analogy that, even though they have a car that will go 150 mph, they are still required to obey the speed limit! Hell, who am I kidding, we all know they don't obey the speed limits! Or, just because they bought a gun doesn't mean they can shot when, where, and whatever they please!

This bandit mentality, in which they take pride, does not fit the historical character of Ham Radio. These folks remind me of the "boz in the hood," who paint graffiti all over the public housing project, and then complain about the lousy housing the have! Get ready to watch them trash YOUR hobby.

Oh - I'm not embarassed to own up to my opinions-

Very good! So why do you feel you are qualified to bad mouth somebody else
on the subject? You have by your own words done nothing to justify your use
of the limited spectrum. So, if you feel justified in your use of the
spectrum without
any meaningful advancement in the state of the art, the same can be said of
those
whom you bad mouth.

Using "fact" and a two-year possible error in the same sentence is a
bit odd, Joe. As I said below, the *latest* possible year is 1BCE.
1BCE is favored due to the lunar eclipse which occurred during that
year; scholars have found reference to an eclipse occurring the same
year of Christ's birth.

Here's a question. I understand the Tech+'s (like myself) who came in
after a certain date (I was first licensed June 1990) will need to
take the general written. However, won't our current tech plus
licenses show as proof of passing the 5WPM? Or do we need the
certificates from the VE's way back when?

War? You mean they're not proud to belong to the Second Amendment
militia? They're ashamed? They'd be washed out in minute in the
real military.

>>Exposing gun owners

Is this a secret club or our Second Amendment militia?

>> the Internet would only be a form of harassment.

This would be a state-run web site; the state's gun registration
office would place their records, already in the public domain,
on their web site.

>>Your recognition reason is nothing but an excuse.

Nope. It's the Second that grants gun ownership to the militia.
It's not a secret militia, so public recognition is in order.

>> Be careful because war can work both ways. For example, what if
>> someone happened to cross post this to some pro-gun newsgroups?

I wish someone would. My suggestion has already appeared in a
newspaper letter. It's nice to occasionally remind gun-owners
of the *full* text of the Second. Surely they're not ashamed
to belong to the Second's militia, right?

>> I'll bet your mailbox would fill up real fast,

That's what the D-key is for.

>>or maybe you would even get a visit from some local folks.

The can't get up to my condo without having passed by at least a
dozen video cameras. Even the elevators have cameras.

>>I think you will agree after reading this that Internet harassment
>> is a bad idea no matter which side does it...

You like to toss the word "harassment" around, Aaron. The info
is already in the public domain -- all the state would have to
do is place the data on their web site.

>It would also identify the houses where it would be safe for hoodlums to
>burglarize and rape.

Lock your doors and get a dog.

>In rec.radio.scanner Brent Irvine & Dianne Lancia <bromo@ix.netcom.com> wrote:

>> Now, if there aren't increased numbers of hams, I would expect that more ham
>> radio frequencies to be lost to commercial services

That doesn't make sense. The only frequencies in danger of being lost
are those in the V/UHF region. There has been a code-free license
available for that portion of the spectrum. Are you saying that that
code-free VHF+ license has been a failure?

How will lowering the HF code speeds provide any more protection to V/UHF?

Our HF frequencies are in no danger of being auctioned; in fact, as
we speak, proposals exist at the government level to give hams even
more HF spectrum.

>1) Too few hams = no political power = bands get taken away for lack of
>usage.

And who is going to take away our HF spectrum? If anything, we stand
to gain more in the near future. (We were given three new HF bands during
the 80s decade.)

>How do you explain ham radio to others, in an age where you can chat with
>people all over the world in IRC? I can call CQ by opening an IRC channel
>for any interest I have, and see who responds. From anywhere in the world,
>really.

If you don't mind being dependent upon millions of miles of phone lines
and government- and corporate-owned Internet computers.

There is no such dependence in amateur radio.

The VE's will know (or should know) because that license was issued before
2/14/91.

The FCC ULS database (and the old "XFS Alphatest" database) has a "prior class"
field (and a prior callsign field too).

If your license shows that it was issued before 2/14/91, the license itself is
sufficient proof. However, if you've renewed since then and it doesn't say
"tech plus," you need to bring your expired license to prove the code element.

755. standard C156E

I didn't say that ... don't start being like some others here who like
to try to put words in my mouth. Given the ARRL's professional
lobbying/legal establishment in Washington, you'd think that if
anyone had "inside information" it would have been the ARRL,
right? (I'm not saying the ARRL did ... just that they have more
"intelligence-gathering capabilities.")

I don't distrust the VECs to put together tests ... obviously
the FCC doesn't either ... they said so.

You just simply can't force yourself to admit that NCI was
instrumental in the outcome, can you? I guess that's your
problem, since I know the direct feedback I got from the
FCC which indicated that we were.

You must not read so well, Jim ... as I said, NCI's comments, my comments,
those of
Bob Vernal, those of Bruce Perens, and NCI's Ex Parte Presentation are all
mentioned.
Collectivel, there are quite a few "citations" to the comments of NCI and
the individual
comments of some of its Directors.

Jon,

I guess I'd say not that they weren't interested ... just not interested
(and committed) enough to take the time to file comments.

I guess I don't read so well, Carl. I can't find any references to
directors of NCI anywhere in the citations. And as I said, the only
place in the section on telegraphy requirements I see a reference to NCI
is the one where the FCC takes exception to NCI's comments. Since I
read so bad, maybe you could help me out and quote the others. Thanks.

Why would I? I've seen no indication that NCI was instrumental in any
of it. After all, NCI was only one of 2200 commenters - many of whom
said roughly the same thing as NCI.

> I guess that's your
> problem, since I know the direct feedback I got from the

Lloyd has two things going for him with respect to filtering the noise in his new mobile installation.

1. He is Chief of Communications for a Nationally recognized amateur radio organization.
2. There is a Radio Shack store down the street with someone to show him what a choke is.

Please tell us where you went to medical school. My friend, who
is an RF design engineer, my antenna Elmer, and was, for many
years, the chief engineer for an AM broadcast station, tried
for hundreds (maybe thousands) of hours to get to 13wpm. His
most sacred goal in life was to be a general class amateur.
He never made it to 10wpm. Walk a mile in his shoes before
showing off your gross ignorance.

Jeffrey Herman <jeffreyh@Hawaii.Edu> quoted from the 1912 amateur regulations:

"1. How to make a diagram of the transmitting and receiving apparatus.
2. How the transmitting apparatus is made and how it works.
3. How the receiving apparatus is made and how it works."

That would be easier said than done today -- there would be a big problem if the applicant chose a circuit that the *examiner* wasn't entirely up to speed on!

Guys, get a life, it happened, you won't change it here. I
know and use code often (as a LOWLY tech+ until the change).
Haven't been able to get to a testing session to upgrade
(they have this tendency to have them on Friday nights at
7:00pm, I get off work at 3:30 and live 100 miles away).
Instead of bitching and moaning why don't you all try to
help someone new learn something instead of being self
centered about MY bands.
Mark
ps: now I know why I like eme, thet don't care about what
class of license you have, if you can put it on the air you
must know what you're doing!

Aaron,

I still believe that there should be some way of differentiating the ARS from CB and FRS. Some assessment of the level of technical expertise (and perhaps even the CW requirement)tend to do this. The reason why I believe that there should be a differentiation between the services is that I do not wish to see the ARS become a wide-band model of the CB service. FRS is too short-range and too new to critique in this way. If you believe that the CB model of radio practice is appropriate for the ARS, then I'm pretty sure we won't reach common ground. It is my belief that the reason why CB is in its current state is that there is no license entrance barrier or intellectual "buy-in" required to participate in the service. Low start-up costs are also a contributing factor, but the true problem stations have significant equipment budgets. These things, coupled with the lack of enforcement action has led to the current state of 27 MHz (and part of 28 MHz!). While there are notable examples of hams on 20m and 75m (and probably other bands) who exemplify the worst of the CB ethic, the relative lack of QRM and the polite discourse within the ham bands would be a shame to lose.

While there may not be an immutable correlation between technical knowledge and civility, there is a lot of anecdotal evidence to support the relationship. Education = Civilization!

Butch, I was K8PXG for almost 38 years before I got K4WJ. You couldn't
tell which class of license I held before I was assigned K4WJ. I
really don't know what your a talking about.

>The no-coders will become "feel good" technicians and therefore

Knowing CW doesn't make a person a good technician. There a many
excellent technicians working at radio and TV stations that don't even
hold an amateur radio license.

>qualify for a "feel good" Amateur call and we
>will have no idea of who is legal on which band which mode.

When I was a novice my call was KN8PXG. The "N" signified I held a
Novice class license. When I upgraded to the General class license the
FCC dropped the N and I became K8PXG. There was no way to determine If
I held a Technician, General, Advanced or Extra class license once the
N was dropped.

Back in those days the 1x2 licenses were coveted because they had less
characters to send and also because, in the past, they were held by
the Old Timers who were usually very knowledgeable operators. (In my
search for vanity callsigns for some of my buddies I've found 1x2
callsigns assigned to General Class license holders. These guys were
assigned 1x2 calls before there was an Extra Class license and they
never upgraded. Unfortunately these guys are dying off and there are
probably only a handful left.)

>flood gates of no-code hams was opened, the FCC gave them the last of all
>the calls remaining rather than creat a new series of calls to seperate
>THEM from US.

"Them from Us" In my opinion we are all amateur radio operators. I
have buddies that passed the 13 wpm general class requirement and
never used CW again. They did not like it. They are excellent
technicians. I bet if they were starting out today they would opt for
the no-code license. Knowing CW doesn't make you a good technician.

Hello,

I posted the previous problem connecting my computer to Yaesu FT-847. I was unsure if I really had a null-modem cable. Well I tested the cable that was sold to me as a null modem cable and it turned out that it wasn't a null modem cable, it was a straight cable. I took it back to the store that I bought it at and purchased the correct cable and it works fine. I really believed that it was too nice of a radio to have any difficulty with a simple computer interface.

This is my first time to post to a news group. Thanks for the response.

I was using the term *you* in the general sense, as in "youse guys".

> I'm -against- nasty attitudes displayed by spoiled children.

So am I, and some of the attitudes displayed by the "do code or die!"
crowd were nothing short of spoiled children. Now to hear them talking
about refusing to VE, and encouraging clubs to shum newly upgrade
generals and extras, smacks of nothing more than sour grapes. The
gloating by those of us who believed in the restructuring, is a result
of being subjected to the constant condescending and bantering by these
guys. A reaction if you will. I don't blame them.

How do you know ANYTHING about any of "these guys"? They may be quite
technically adept. The fact that they all have no use for CW, and are

glad that the requirement has been lowered, bears no correlation to
their technical ability.

> Most of the new guys (and too darn many of the old guys!),
> be they "good attitude" or "bad attitude,"
> have trouble even using a meter, much less fixing their handhelds.
> That's just a fact.

Yes it is. Which is why I shake my head in amazement when someone who
can't solder a mike plug (And I'm not refering to you), get's all upset
and has the nerve to call this restructuring "dumbing down", and who the
"real" hams are, when all they DID was learn 20 WPM, with little or no
REAL theory knowlege of their own. Tell me again who the "real" hams
are?

Dave

Sorry, a minor correction...ND8V is Mike from Kalamazoo, Michigan. I
believe you meant W4JYZ, the name DA was given to him by Mike.

And another point of contention. The jamming has basically stopped on
3901 and 3894.5. Might I suggest 3950 as the place for jammers and
wanabees? This apparantly is now the defacto "jamming freq" of choice.
Enjoy, that is until Riley's rangers puts a crimp in your style.

Back in the 80's when I was a civilian employee with the Federal Govt I
worked on the Motorola secure voice system. It operated via standard
vhf/uhf repeaters. It sounded like a wide band noise when received on
a standard fm receiver. If this is what you are discussing, then the
entire HF spectrum would be a big hissing noise. EH?

The tech entry requirements have not changed. If the "CB Types"
have not gotten a tech license already, why do you suppose they
would now bother getting a general license. IMO, it's just
another "Sky is Falling" myth from the PCTA folk.

Robert,

I will get extra, not only general. But I have to do it now, since after April 15, there would be no trace of my tech plus license. Somebody had suggested that after April 15, 2000, the FCC database should contain a field to indicate the previous license class. That's a good idea, since people will know who had HF privileges before.

You could try sending in a Form 605 with an Administrative
Update to do something harmless like change your email or FAX
number, which should cause the FCC to burp out a new paper
copy of the license, which should have the Tech Plus info on it.

On the other hand, I bet this will get solved before April;
either the FCC will decide to keep the current indication
of Plus status in the data base, or there'll be an officially
archived copy of the data base as of April 15 with the old
indication in it, or something I haven't thought of.

Aaron,

In a way, I do feel that technical expertise (or at least technical
enthusiasm) tends to engender respect for the hobby, and that translates
into respect for others involved in the hobby. I think that most
interpersonal problems are related to a lack of respect, so it follows
that a more "Elmer"-driven ham radio will be more fun.

802. Do I live in a glass bubble or what??

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-05 00:00:00 UTC
From: BamBam <kl0an@my-deja.com>
Message-ID: <850j07lra1@nnrp1.deja.com>
Source record: 122898

I read a lot of the messages in this newsgroup and some of them get really long especially when it comes to code vs no-code or the speed of code that should be used, or hams vs non-hams etc, etc..

I've been an amateur radio operator for 3 years now and I faithfully go to club meetings once a month and help out with club events whenever I can (sometimes taking leave to work them) so I can't say something like "In all my years of experience..." or anything like that but I can say in the few years I've been an amateur radio operator I've never experienced the following:

never seen anyone stand up and piss and moan about morse code in our meetings, if they don't like it, they sit quietly..

never heard all the garbage mouths or ex-cb'ers on 2 meters that people claim are there..

never heard anyone in our code classes belly-ache about not passing the tests or the code being too hard after taking the classes and making an effort to learn..

never heard any jamming or profanity on any of the repeaters in my area (and our repeater system covers 60,000 sq miles)..

Sure, every club has thier old timers that can recite totally useless facts about who had your call sign back in 1963 or what the FCC rules were back in '42 when he first got his license but, one day you might be one of those guys, give them the respect they deserve. I think our club let's them say thier piece and then we carry on in the way that the majority wants to go and when you look over your shoulder, the old timers are right there helping.

We have several younger members in our club and there are quite a few of our older members that are excellent "Elmers" and they don't hesitate one bit to help each other out..

Unfortunately I'm due to leave here in a few months due to military commitments but, in a year and a half, I'll return to this state and I'm sure the club will be there moving right along as before.

Am I living in a glass bubble?? Are there any other clubs or magical places like this out there??

I guess what I'm trying to say is that it'd be nice to hear about the good things in amateur radio whether it be how you might have helped someone or someone that might have helped you or things your club does to help the community and ways that improved the amateur image in the

community.

Think about this for a while, it's a new millenium, time to turn over a new leaf, make a resolution, give it a second or third try..

Hi folks,

I usually don't comment on things. I just read and go on. But as a VE and moreso as someone who got started when the FCC was still issuing their tests, here is something of a personal opinion which speaks from past as well as current experience(s). This is based on my days as an avid radio fan both of CB and HAM. Before and AFTER becoming a VE. By the way, my love for electronics started with 2 different fields. CB and Astronomy, at the age of 12. I know I'll be flamed for some or all of what I am about to say while some may agree in whole or part with what I have to say. Also, I don't consider myself to be a great writer or speaker by any means, so if anything comes off as redundant or illogical in phrasing, my apologies.

Amateur Radio is going to change one way or another whether we like it or not. It already has "long" before the restructuring. Recall the arguments with the NO CODE license. And it went back even before that.

I'm not saying I'm for or against CW even though I myself, am not an avid user of it. But I fail to see where it has kept anyone off the bands that should not have been there, or stopped any use of the bands not originally intended. Meaning anyone can go and buy a used HF rig OR new, and put up an antenna and talk. Even steal a call sign. ANYONE can get on and swear till the cows come home. CW won't stop any of it. Even now, you can get on the "Extra" bands and hear it.

As for theory, I personally know Generals through Extras, who can't solder, much less troubleshoot. I know one EXTRA who doesn't even know a fuse symbol! I know too, of some who were great at memorizing enough to get the licenses, even commercial licenses, but couldn't troubleshoot a radio if their life depended on it.

I ALSO know some 2 way radio techs who are very good in their fields and either can't get the code or don't have time to learn it due to jobs and family life. So, does this make them any less of a future good operator? NO. Actually, when they are done working, they could care less about having to learn code.

CW ALONE does NOT constitute a good operator either in the mode itself or the learning of the theory to make a good operator. They don't really work hand in hand. Even if the code had been wiped out altogether, anyone can learn theory enough to pass the exams.

The ONLY way you can truly pass an exam in MY opinion is to NOT know what is on the exam, therefore one MUST LEARN all they can so as to be properly

prepared for any questions that may come up. Knowing in advance as is the case now, is EASY! You don't really LEARN that way. I recall a few years back, when the FCC issued a SAMPLE test format it was MAYBE a sheet or two of topics and sample questions for a given element. I still have one that they sent me when I inquired about the Novice and Technician exams. You never really knew what to expect, therefore you had to be prepared, or you wasted a trip, money and time. There were some who started producing books by asking people who came out of exams, what types of questions were on the exams so a study guide could be produced. I think there were others that followed suit. I can't recall when the actual step was taken to make public the pools so that it would lead to the present testing we have today where ALL possible questions, answers and distractors are made available.

All one really needs to do, is read the book through once or twice and they can usually start using common sense to come to the right answer by the third try. It's almost like stealing the test off the teachers desk. Look it over a few times and know exactly how to pass it. You don't learn by that method no matter how hard you may argue the fact that you do.

But that still doesn't make one proficient at troubleshooting or repairing radios. "Talking" into a microphone, is like CW, a language. Whether you are speaking English or trying your hand at learning Spanish or French, in which case, it would be very similar to CW. A NEW language for the beginner. But you can curse in FRENCH, SPANISH, ENGLISH and CW. Whether you can speak in a foreign language or do CW will not give you the miraculous power to repair a radio in the event of a problem.

If we all want better radio communication and policing AND a FUTURE of experienced electronics people, it is up to ALL OF US, to join together in at any level to help make it better. To NOT tolerate that which will destroy it as we know it. Instead of BASHING those who can not learn CW or choose not to, help make them better operators by understanding the THEORY that you know they WILL need to know to keep the hobby as well as RADIO alive.

Maybe you like (love) CW, maybe you don't. THAT alone, won't make or break the future of radio. Yes, maybe CW can and does get through when voice wouldn't. I can set a couple examples right now, but that isn't my point. It shouldn't be made the central focus of trying to entice our future generations to learn how to enjoy or get into a skill of electronics.

There are a lot of laws in radio and in many other areas that are not just. They serve a few and not the majority. A prime example in radio is this. And I KNOW before I say it, some will get upset, but I'm not saying it to pick on a certain group.

Hams now have to learn RF safety rules. To know when their RF levels may pose problems in health and interference. Yet you have CBers who alot of whom run lots of power and think nothing of it. THEY are not held accountable. Is it fair to the hams? NO. But, the CBers are not allowed by law to run that much power and they know it, but do they care? NO!

But then is it fair to keep someone out of radio just becuase they can't learn dits and dahs? NO. Maybe that future Ham, a current CBer, can get licensed and MAYBE - LEARN how their signals may affect others. To LEARN that POWER isn't EVERYTHING!

I'm still involved in CB as well as Ham. But in both cases, I'm lucky to pick up a mic twice a year to ENJOY talking. The most my HF rig has been used in two years was at Field Day and not necessarily by me. After fooling with radios most of the day doing repairs, I don't care to look at a radio. EVERY field, has it's bad apples. Hams, CBers, Computer Internet users. Even professionals. Its a matter of tolerating it or not.

I do currently hold both an Extra Class license as well as a commercial license. But I can tell you, CW does NOT help me in my job repairing radios. It does NOT keep me from hearing the garbage on the "General" to the "Extra" bands. Let's quit using CW only, as a cop out. Let's get to the real issue(s) whatever they may be. I recall when guys used to say to me, I'd like to get my kid started into electronics and into ham radio because it's clean. NOT ANYMORE! I recall when people flocked to three different exam sites I worked with to get licensed or upgrade. NOT ANYMORE! And this was ALL long "before" the restructuring.

You like CW with your radio, like salt on food, others like no cw with their radio, like no sodium allowed. It's a matter of TASTE! To each their own. But let's not rip into each other for what we prefer. If CW is the ONLY thing that keeps us ALL from getting along and advacning the future of radio, it seems kind of stupid to allow such a petty issue to do that. When we're all lying there dying, will CW make us any better humans? NO. When you stop to think about all the insults you may have flung to others just because of CW, will it really have been worth it? NO! If you were to be embroiled in a dispute with someone over CW and get so upset as to have a Stroke or Heart Attack, will it have been worth it? NO! And ADMIT IT, some of you DO get VERY upset over things. I don't know you, but you know who you are. Will being an opponent or proponent of CW save your soul? I DOUBT IT! It's a short life, let's try to get things to where we can all live more peacefully. Trying to set a standard for good living for our kids and grand kids, trying to push for more advances in the fields of technology sure isn't going to be centered around CW. The internet has nothing to to with CW except the arguments over it about it. Most kids today are computer whizzes, not radio techs. Talk internet to them, they'll talk to you. Say CW, they'll say WHAT? Changes will come about whether we like it or not. We don't have to like it, but we can try to make sure it's able to be tolerated. Like food, we all have to eat. We may not like the cook or HOW they cook, but that is something we can learn to tolerate. If radio is to survive and the field of electronics where radio is concerned, CW or NOT, we must make sure the THEORY and EXPERIENCE is passed on.

There are too many more important issues in this world to put our energies into, than to "bitterly" argue about a single mode of communication. I'm not saying it can't be discussed, but to allow it to tear at our souls,

tear apart an otherwise worldwide community is really stupid.

Let's do what we can to make this 21st century a much better one than last. Put aside the issues that really don't solve anything and work on those that do.

Just my two cents for the new milennium. Happy New Year and Millennium and good radio operating to all.

A rather cocky and arrogant fellow with little to crow about. That
certainly doesn't stop your crowing though.

Of course I have that right. I'm not held in bondage to political
correctness. You just did the same above by calling anyone who doesn't
share your view as an "old fart", did you not?

> There's a difference between "liking" someone, and tolerating someone.

There is certainly a difference. I am required to like nor tolerate no
one. No one is "entitled" to my respect. Your "hazing ritual" line is
another which I find offensive. I've decided to neither like you nor
tolerate you.

> anyone, based simply on their perceived "worthiness" (in your > opinion).

I've not decided to refuse "good will" to newcomers. I've decided not
your decree of who should sell equipment and throw in the towel. While
prejudice can be a bad thing, you weren't appointed arbiter of who is or
isn't prejudiced or of who should stay and who should leave amateur
radio (leaving more room for the "rest of us").

> If they pass the required FCC tests, they are entitled to the privileges
> as hams, as set forth by the FCC.

Agreed but I don't need to throw in a towel, sell my gear or to like any
one of them.

> Bottom line: your opinion is irrelevant. The law is the law.

Oops. You don't get to decide what is irrelevant and, in this case, the
regs are the regs.

...or, in my view, one who brays about his upcoming "gimme" as if he'd
just won the Nobel Prize.

> >
> > Strive to be mediocre!

> Seems to have worked well for you.

Dave, I've passed all the written exams and a 20 wpm code exam. I've
never settled for mediocre in anything I've wanted to do in this life
and I've never asked for anyone to make something easier for me because
I couldn't handle it.

> Come back later when you can get past your opinions and look at the
> issues objectively.

I'll come back any time I like. This is a public forum (as often pointed out by the yet unlicensed Len Anderson).

Of course. If my project extended through more than one review
period and I was ahead of schedule, I was reported as excelling,
i.e. *in the process of being victorious*, and got a good raise.
NCI is in the process of being victorious, not in the process
of failing as you would have us believe.

Such wideband digital systems are interesting, as they disprove the canard that increasing the bandwidth must always decrease the signal-to-noise ratio.

There is no reason why HF could not be used with what amounts to a digital multiple frequency diversity system, in which "channels" would be separated by timing instead of by frequency.

The problem is that they are incompatible with current systems. Proponents may claim that SSB, AM, and CW users would only notice a "slight increase in the noise floor." But what if the spread spectrum transmitter is located in the next block?

Narrow-band digital is another story. Broadcasters are now getting 8-kHz good-fidelity audio out of standard phone lines. I see no reason why similar techniques couldn't work for 3-kHz HF voice channels, though decoding simultaneous transmissions might be a real stumbling block -- the brain does pretty well with that on analogue channels.

With all good wishes,

Kevin, WB4AIO.

If you are trying to say that ONLY those who were truly interested in the outcome filed comments with the FCC, you would be incorrect. One might assert that many of those who filed comments were worried that they wouldn't be pleased with the final outcome. I was not. However I did nevertheless send my comments to the ARRL.

821. RESTRUCTURING NOT WHAT YOU THINK!

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-05 00:00:00 UTC
From: Jack Malone <malonej@c2i2.com>
Message-ID: <buNc4.1027$197.90161@news.goodnet.com>
Source record: 122917

ARRL IS VIOLATING THE SPIRIT OF PART 97 of Chapter 1 of
Title 47 of the Code of Federal Regulations as amended:
Part 97 - AMATEUR RADIO SERVICE
Pursuant to ��97.505 Element Credit.
(a) The administering VEs must give credit as specified below to an examinee
holding any of the following license grants or license documents:
(8) An expired FCC- issued Technician Class operator license document
granted before March 21, 1987: Element 3.
(9) An expired or unexpired FCC-issued Technician Class operator license
document granted before February 14, 1991: Element 1.

On or about July 17, 1951 I was issued Amateur Radio License W8HED with TECHNICIAN Operator Privileges. At the time this License was issued I had successfully passed 5WPM by taking Elements 1, 2, & 3. I had all the operating privileges of a General Class License with the exception of the 13WPM requirement. These examinations were administrated by the FCC Regional Office in Beaumont, Texas, not some VE.

On or about September 18, 1966 my license expired, I did not renew it as I was not able to pass the 13WPM to upgrade to General Class.

On or about January 4, 2000 I e-mailed to ARRL VEC my present status, that I had all license documents and received the following answer.

Jack, if you are not a licensee now, on or after 4/15 you'd need to take Element 1, 2 and show a copy of your old "Technician" license at a test session to go to General class. Element 1 is the new 5 WPM designation.
73,
Bart J. Jahnke, W9JJ
Manager
ARRL VEC
vec@arrl.org

I am not going to take another code text of 5WPM which leaves me two choices if ARRL doesn't clean up their act.
CHOICE 1: Forget about Amateur Radio and the ARRL.
CHOICE 2: On April 17, 2000 I will file in U.S.Federal Court at Tucson, AZ a CIVIL COMPLAINT against the ARRL for VIOLATING MY CIVIL RIGHTS pursuant to U.S.Code.
Comments welcome.

Remember when your' call meant something? Remember when it told the world
that you were advanced or extra? The no-coders will become "feel good"
technicians and therefore qualify for a "feel good" Amateur call and we
will have no idea of who is legal on which band which mode. When the
flood gates of no-code hams was opened, the FCC gave them the last of all
the calls remaining rather than creat a new series of calls to seperate
THEM from US. But then with a Jimmy Carter/Bill Clinton Demokracy, all
must share equally in the earnings of a few. I think the time has come
for us to shove the flowers down their barrels' for a change and give
piece a chance.

824. Ham Radio and technological change

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-05 00:00:00 UTC
From: phil-news-nospam@ipal.net
Message-ID: <xtNc4.195$7I6.1161@newsfeed.slurp.net>
Source record: 122920

Today is a world of fax machines, internet, cell phones, handheld computers, electronic pets, and Y2K glitches.

Where does Ham Radio fit into this?

Ham Radio may well be a geeky kind of thing as the term is used today, but is it something that genuinely holds people's interest? I suggest that perhaps it is not.

We can pick up a cell phone and talk to someone on the other side of the world, perhaps on their cell phone, without fading, without having to tune the transmitter or aim the antenna (very much), and without having to figure out the MUF.

We can see what millions upon millions of people have to say via their web pages, in an instant, right from our home desk or table.

So what is Ham Radio relative to this?

Fifty years ago, there were no computers, no internet, no cell phone, and TV was just getting started. Few of us could have even imagined much of what we have now. Quite a lot of the current technology then was indeed radio based, and much of radio itself was still to be understood. It was a technology, but it was also an art and science and it was fascinating to many. It was also an operating practice that challenged the mind and body, and rewarded those who met that challenge.

Today, in the year 2000, Ham Radio is virtually none of what it was just fifty years ago. Sure, all of those things exist. We actually can power up and tune up an old tube rig and actually make a contact with someone on the other side of the world. And today, many people still enjoy doing exactly that, or some variation of it.

But is that something that is going to get, AND KEEP, the interest of people who grow up surfing, or even hacking, the internet at age 12? Is that something that will interest the twenty-somethings just out of college that have cell phones and are designing the next generation of phone switches, network routers, computer chips, and pet robots?

The FCC has now finalized new rules that, hopefully, will bring in more people to the Ham Radio community. But will they come? Will they stay? Will they find an interest in something? Do the rule changes even matter?

When there was an accident on the highway in the 1970's, hams would make a phone patch on the local repeater, and emergencey dispatch would know about the situation within a minute. Today, they are flooded with dozens

of cell phone calls to 911 and by the time the phone patch is made, the response is "thank you, emergency crews are already on the way".

Ham Radio is still a lot of things. There are things hams can do which cannot be easily, readily, or practically done by other means (yet).

But it isn't the same as it used to be. It just isn't, unless you are living in the past. It's OK for hams that have done these things in the past to continue to do them. But much of that simply isn't going to get the interest of the kind of person today, who would have become a ham fifty years ago.

If we all live in the past, then Ham Radio will surely die out as we go silent key, one by one. If we want to make sure Ham Radio does not die out, we have to transform it into something that will have a net GAIN in people, not a net LOSS. To do that we have to have something here that gets, and KEEPS, the interest of today's technological "geeks". And it has to compete with cell phones, internet, robots, and all the other assorted things we have today.

Changing people's interests into something else, for the most part, is simply not going to happen. Trying to make someone else interested in the things we might still love and enjoy doesn't work. It might well run them off. We need to realize that it is a different world and the people in it have a different set of interests.

The latest restructuring of the license classes by the FCC does not change anything about the world we live in. The world's change is now here, and you cannot, whatsoever, petition anyone to even reconsider that. Even if by some quirk of politics, the latest rule changes are reveresed, we must face the fact that what WILL kill Ham Radio is here now, and it is here to stay, and we have no say in the matter, besides figureing out how to work with it.

New rules or not, we need to make Ham Radio be something of interest to today's young technological people. The new rules themselves are not here to change Ham Radio, per se, but they will make it easier for us all to change Ham Radio ourselves. We need to TAKE ADVANTAGE of the new rules to keep Ham Radio alive, and make it thrive, for another 100 years. We need to make Ham Radio be more, FAR MORE, than it was 50 years ago, more than it is even today. We need to set our sights not just on the year 2000, but the year 2010, and even the year 2050, even though surely things will be around then which we cannot imagine today.

Ham Radio will change or Ham Radio will die.

Make the change or let it die, you decide.

The new rules have been handed to us all as a TOOL with which WE must make the changes. If we make no changes, Ham Radio dies, whether there are new rules or not.

So let's talk not about trying to reverse what cannot be reversed,
but instead about how to make Ham Radio move forward, technologically,
as well as socially.

Ditto to Cecil's comment but, also...c'mon--I find that most hams possess little understanding of the callsign "status" anyway. For instance, the vanity calls are quite prevalent and only cost $13.00 now. I have the call W5TIT, which is a perfectly legitimate callsign for a Technician/Techincian+/General. BUT, when I was first licensed the 1X3 calls were gone in the 5-call area, so I was given a Novice (I think) call of KC5HQJ. I actually have a legitimate call for my class of license and DID NOT have a "worthy call" first issued to me.

In addition, why does there need to be a distinction between hams? Are you now saying that it IS difficult to tell good operators from bad operators based anything BUT their callsign? Are you now saying that there are actually no-code hams that have GOOD operating practice? C'mon...get off da schtick. Your serious disregard for continuity and logical argument is of concern to me how about real your "feelings" are for the hobby over your personal prejudices.

There has been a code exemption for physicaly handicapped people whos
disability kept them from doing medium speed code,look wow that was
abused.
There wasn't a mental disability waiver because no one is that
disabled.(you could be the exeption).

The victory is not for the 5 wpm General, but rather
it is that the 5 wpm is ALSO the Extra
requirement. THAT is the major difference between
what many others wanted and what NCI proposed.

Cheers,

I was licensed Jul 1990, as a Tech (5wpm was a requirement in 1990). The no code techs came later on. As a result, it says only Tech on my license, my question is, how do I prove that I am a tech plus after April 15, 2000? If you make a search on my call on FCC database NOW, you will get "class= Tech plus", but after April 15, I am cooked!

> at home right away.

Your education, and your friends, can start TODAY on how to "communicate" on any of the Ham bands.

You will feel more at home by immediately forgetting the idea of using "10-codes" on any Ham band. It's better to break old radio bad habits right away so you can begin to put into practice better ones. Besides why waste time. If you have paid any attention at all the emphasis is being placed on "plain language" communications, i.e. getting rid of code numbers and other stupid radio type lingo, and just say what you mean so everyone understands. Doing otherwise is a sure way to get branded a LID. If you want to know what a LID is, well use those 10-codes on the air and somebody will tell you soon enough, and will probably break a number of the Part 97 rules, primarily dealing with language, in the process!

I'm not saying this to be mean or because you "were / are" a CBer, but to help you make the transition to being a competent Ham and effective station operator.

> These sure are exciting times to be a ham!!

Yes they are. They will also be a very trying time for some too! When somebody tries to point out when you are doing something wrong, don't take it the wrong way, they may only be trying to help you and your friends to fit in with a world wide group of other Hams.

Yeah. Hells Bells, man even in Borneo- you know, out there
in the jungle where people used to eat each other, they have
a 12wpm code test.
Read this-

Don't get me wrong, I merely want to show that 5 wpm is
SLOW, that it can be
done without much learning. But, doesn't want others to do
that trick in an
exam! Why? Coz you'll have a hard time to increase your
speed later, if
those dots and dashes table started to stick into your
brain, hee...U have
to unlearn them, for you'll start to see code as "dots and
dashes", rather
than hearing the rhythm or music of the code as the speed
gets faster. Yes,
no chance of doing the 5 wpm trick here too in an exam! At
present, ours is
a single "Class A" Licence with a 12 wpm code for all, no
exception. We've
to sweat it out too, hee...

The best I could do at JC Penney was their GPX unit with 50% off their
marked price of $49.99. Still, at 24.99 it wasn't a bad price since
I've been wanting to get one to see how they measure up..

Just to set the record straight here, Aaron, our club's call of W2SEX
was originally issued as W8SEX in 1938 to Bert Salefske, our club's
first secretary/treasurer. When the callsign districts were
reorganized in 1946, W8SEX became W2SEX. Bert became a SK in 1968 and
the club applied for and was granted W2SEX under callsign trustee Milt
Dexheimer, W2VCL. The club has used the callsign W2SEX actively for
ARRL Field Day and special event/contest activities since 1954.

I am sure that this post will fan the flames for some but let me
say right now this is not my intent..
I have been a ham since 1984 and I am currently a tech-plus..and support
license restructure.
I am 33 years old and have been around ham radio...all of my life..
You see my father was a ham and fell in love with the hobby
because of him...
Dad was a Chief Engineer on tuna boats working out of San Diego
and would be out for months at a time fishing to support our family..
I grew up talking to him through a phone patch that was graciously done
by some very nice hams..I still remember talking to my father with the
SSB making his voice sound funny and having to say "over" when I was
done. My dad gave me my Christmas, Birthday and Graduation greetings
through the radio because that was the only way we
could talk..My dream as a child was to be a ham radio operator
so I could talk to dad and other people around the world and learn
more..
I also remember the "Ham Parties" my parents used to have when dad
was home, they would invite all of his ham buddies over for a big party
and I would get to meet some of the guys that ran the phone patches
and be able to put the face with the voice..these were always very
nice,very smart and unusual people.

When I got my license I remember how happy I was and how proud my
father was of me...and as per his promise he bought me my first
2 meter rig for my birthday..

The point of all this is...I have had so many positive experiences
with Ham Radio that it kills me to see the attitudes of some people
on the air and in the ham news groups..so I have a few suggestions..

1. Think about what you say before you say it. Are you helping or
hurting our hobby? I don't think being a pompus jerk is the best way
to promote our hobby and help it grow.

2. Make the effort to expose people at work,school or wherever to what
Ham radio is and what it can do. Be part of the solution not the
problem.

3. If you are proud of your code speed..great but show your love of code
by showing people why it's fun and important..don't use it to beat up
fellow hams and potential hams which results in discouraging others..

4.When on the air try to do things that make ham radio great..help out
a newbie..give information that someone requests..talk about new
rigs..whatever it takes to bring honor to our hobby..and keep it

interesting.

5.Have fun....some people on the air and in the newsgroups seem to only use their time to harass and complain..which I can't figure how that can be fun..Fun is contagious..

So for those of you who are out promoting the hobby, having fun and making an impact..great I hope there are more of us..may all your DX be good.

And to all of you who are snobs,whiners and kooks...may your finals blow and may your coax be soggy...

Those SSB guys that you were refering to DID "earn" their ticket, and
their behavior is nothing to write home about. So that more or less
blows your theory.

Dave

885. Restructuring FAQ from HamTest.com

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-05 00:00:00 UTC
From: ko6ux@adi-radio.com
Message-ID: <84u41iqub1@nnrp1.deja.com>
Source record: 123007

Amateur Radio Restructuring is here! On December 30 the FCC released a Report and Order streamlining the Amateur Radio Service from six classes of license to three. The FCC also mandated sweeping changes to the written Amateur Radio theory tests and abolished the 15 Word Per Minute and 20-WPM Morse code exams.

The following 14 question FAQ is intended to help explain the changes in the licensing structure and how it affects hams who already have their licenses:

1. Has the FCC finally issued a ruling on amateur license restructuring?

Yes. The FCC issued a Report and Order on December 30, 1999 detailing major changes to the amateur radio service license structure. They eliminated several classes of licensing, and changed the requirements for the existing classes.

2. What are the new license classes?

Under the new system, the FCC will now issue only three classes of license: Technician, General, and Extra. These licenses will have the same operating privileges as the current Technician, General, and Extra licenses. No new Novice, Tech Plus, or Advanced class licenses will be issued. Current holders of Novice and Advanced licenses will be grandfathered into that class, maintaining their current privileges. Current Tech Plus class hams will retain their current privileges, including HF privileges, but will now be renewed as part of a combined Technician class.

3. When do these new rules go into effect?

These rules go into effect on April 15, 2000. Until that time, the current rules remain in effect. If you wanted to pass the 13 or 20 WPM Morse code tests, just to have the "bragging rights" you can do so now, anytime before the new rules go into effect.

4. Is there still a Morse code requirement?

The FCC did not completely do away with the Morse code requirement. International Radio Regulations require that any ham radio operator with operating privileges below 30 MHz be able to copy Morse code at a speed of 5 words per minute. The FCC is bound by this requirement, and could not change it. However, the FCC eliminated the 13-WPM and 20-WPM tests. There is now only a single code requirement for the amateur radio service: 5-WPM. As before, the Technician "code free" class license does not require any Morse code proficiency at all for operation on bands above 30 MHz.

5. So what are the requirements for the new license classes?

The requirements for the new license classes are:

Technician: 35 question written exam (element two)
Technician (w/HF): 5-WPM Morse code exam for HF (element one)
General: 35 question written exam (element three) PLUS 5-WPM Morse code exam (element one)
Extra: 50 question written exam (element four)

Requirements listed are cumulative. For instance, in order to qualify for a General class license, the operator must have first fulfilled all the requirements for a Technician class license.

6. I am a Novice class licensee. I heard that under the ARRL proposal, I would have been automatically upgraded to General class. Am I upgraded?

No. Your Novice class license is grandfathered under the ruling, and you retain your current operating class and privileges. The ARRL had asked the FCC to automatically upgrade all Novices to General Class because the League had hoped to do away with the current Novice sub-bands and use the frequencies for other uses. The FCC declined to adopt this proposal. However, since you have already passed the 5-WPM Morse code test, you can now easily upgrade to General after April 15, 2000 simply by passing the new Element 3, theory test.

7. What about the Tech Plus license class?

All Tech Plus licensees will retain their current operating privileges. However, when they next renew their license their license class will be shown as "Technician" instead of "Tech Plus". There will now be a unified Technician class instead of two separate classes.

Under the new rules, any Technician that has passed or who passes the 5 WPM Morse code test (now called "Element One") will be given the HF privileges currently reserved for Tech Plus class operators. However, they must retain a copy of their Certificate of Successful Completion (CSCE) for Element One and produce it for the FCC if any questions arise about whether they have qualified for their HF privileges.

8. I have the "old" Technician class license. How do I fit in?

If you have a Technician or Tech Plus class license that was effective prior to March 21, 1987, then you already have credit for both the Element One 5-WPM Morse code exam, and the Element 3 General Class theory exam. For this reason, you can automatically be upgraded to the new General class license. All you need to do is appear at any VE test session on or after April 15, 2000. If you present both a copy of your current license, a copy of your original license with an effective date prior to March 21, 1987, and fill out an FCC form 605, you will be automatically upgraded to General class.

9. I am an advanced class licensee. Can I upgrade to advanced by taking the current Extra class written test and no code test? Or do I have to wait until the new rules go into effect and take the new extra class written test?

Like the Novice class, the Advanced class license is being grandfathered under the new rules. Advanced class hams retain their current operating class and privileges. However, the FCC is offering Advanced class hams a limited time offer to upgrade to Extra by passing the current Extra class theory test. If you pass the current Extra class test anytime before the new rules go into effect on April 15, 2000 you will receive your upgrade to Extra. No additional Morse code test is required. If you wait until after April 15, you will have to take the new Extra class exam to qualify for the upgrade.

10. I am currently a Tech Plus licensee. Can I take the General class theory test now, and be automatically upgraded to General class when the new rules go into effect?

Yes. If you complete all of the current components of a given test element before the new rules go into effect you will get credit for that element even after the new rules go into effect. As a Technician class operator, you have already passed theory Element 3A. If you were to now pass Element 3B (the current General class theory) you will receive credit for all of the new Element 3 once the new rules go into effect. Likewise, if you also passed both Element 4A and Element 4B you would get credit for revised Element 4 under the new rules. However, if you have passed only part of an element (such as if you have passed Element 3A but not 3B), then you would not get any credit towards new Element 3 after the rules go into effect.

11. Is the format of the code test changing? Will there be a Morse code sending test?

The format of the Morse code test is not changing. Volunteer Examiners continue to have a wide degree of flexibility in administering Morse code tests to examinees. Most VEs will likely continue to use the same 10 question multiple choice format / one minute of solid copy format that they have been using for years. Few VE teams now require a sending test, and this will likely continue to be true under the new rules.

12. What about the written tests? Will they be harder?

The written tests will likely be going through an overhaul in the next few years. However, by reducing the number of questions required for Technician class to 35, the FCC made the entry-level class of license somewhat easier. The FCC also gave the National Council of Volunteer Exam Coordinators (NCVEC) a lot more flexibility in determining exactly what kinds of questions should appear on each test. It is likely that the general make up of the tests may change quite a bit, with more emphasis being put on operational questions and on questions having to do with newer, more advanced type of communications, such as digital modes.

It will take some time for the NCVEC to completely revise the question pools. For time being it is safe to assume that the questions will not change too much when the new rules go into effect on April 15, 2000. We will bring you more up to date information, including the complete questions and answers for the new question pool, as this information becomes available.

13. Were there any other changes?

As a part of this rule making the FCC made two other minor changes to the amateur radio service rules. First, they amended the rules to allow Advanced class Volunteer Examiners to administer General Class license examinations. Secondly, they decided to stop issuing new RACES licenses. No other changes were made.

886. W2KP "RADIO HERO" NABBED "RAINCOAT CHARLIE K3CQR

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-05 00:00:00 UTC
From: reeldeal@my-deja.com
Message-ID: <84u48n$r1p$1@nnrp1.deja.com>
Source record: 123008

It looks like AF2Y "Banana Nose" Swartzbard of "Nose Warmer" fame is doing a character chop job on Ed Clark W2KP. Wonder why?

I will answer that question, It was Ed Clark W2KP who blew the whistle on Af2Ys friend Peter Skudgeons. Skudgeons was the boot legger sailing up and down the east coast in a boat back in the ninetys qrming on 14313. He was meeting AF2Y for lunches all this time when he was in the Clifton N. J. area.. "Dutch Treat" of course. We all know the cheapness of Af2y!! AF3Y supported Skudgeons in his outlaw work so he has every right to have a bad taste in his mouth for ED.

Ed also was instrumental in bringing K3CQR " Rain Coat Charlie", nasty talker abuser of women on the ham bands, to bay. another reason for the "NOSE" to hate Ed.

So folks you should know where AF2Y is coming from . Ed did in some of his buddys who were breaking the rules and some were not even amateurs. Ask him about it!!

Paunched, very overweight, balding and herpes-infested,
wideass@my-deja.com slobbered in message <84tdf4$em4
$1@nnrp1.deja.com>...
> Here is a neat trick.......

Sorry, we're not interested in how many tube steaks you can swallow
every night.

>
> Punch in "KC8JBO" in the Deja finder box. You will see a bunch of
>postings, who are 95% of these postings by?
>
> NONE OTHER THAN WIDEASS KC8JBO HIMSELF!!!!

Well, Duh, you cluesless computer NEWBIE.
What would you expect the search to be, doodlefuck?
At LEAST I have the guts to post using my call, a gutless, obese, aids-
infested coward such as yourself doesn't have the intelligence or
ability to do either one.
And, btw, from your picture, you look like you could use some Rogaine,
faggot.

> He has no one to "talk" with, hohohoho.

Yet, you keep changing your alias and replying to my every post like
the whipped, servile puppy that you are.
Of course, you can't do any better, can you?

>
> Your USAF record will be posted REAL SOON, FATSO.
>
<CORRECTED WITH TRUTH FILTER>
>
> PITBULL WITH AIDS

ROFLMAO! Yeah, right. Like anybody CARES.
TRANSLATION: You have no access to USAF records. You post under an
alias. You have no credibility, so you will make up a record.
At least I served in the service, and have an honorable discharge.
A draft-dodging faggot like you wasn't accepted. You can't get access
to records without my written authorization, fucknuts.

Now, my whimpering puppy, sit before I take you back down to the animal
shelter.

892. CB / HF Gateway

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-05 00:00:00 UTC
From: Quux <ou812icu812@netscape.net>
Message-ID: <84u8h1uef1@nnrp1.deja.com>
Source record: 123014

When can we set up a CB / HF Gateway?

This way, Smokey and the Bandit and all them Good Buddies could start yapping with the fine folks on HF! I mean , this could be just the thing the community needs to bring _all_ the radio operators into one huge brotherhood. Knowledge could be spread around freely, and seasoned HAMs could help the CB'ers with their test questions and general RF theory. The CB folks could rub off and get the HF bands to get that 'CB sound' to 'em...you know, 10-4, What's yer 20?, Hey! Yer signel's cummin'n in _real_ good...'mon back?

This is going to be one neat century!!!

73's and 8's and where's that Radio Shack catalog?!?

893. Poor, pathetic Lloyd the Toid and Steve Ton-Duhhhhhhhhhhhhhhhhhhhhh

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-05 00:00:00 UTC
From: KC8JBO <kc8jbo@my-deja.com>
Message-ID: <84ufjd$3hg$1@nnrp1.deja.com>
Source record: 123015

These two pathetic evolutionary throwbacks really think they have it all.
Lloyd, the eternal Technician licensee, too stupid to pass the 5 wpm code test wants help or so he posts. Then the idiot needs help to install a mobile rig, etc in his self-proclaimed "girl-magnet" pickup truck. Hell, Lloyd couldn't get laid with a high credit limit platnium visa card. He needs all the help he can get, allright. This bigoted, racist bastard has been showing us his interaction techniques on here for some time. Now he posts a private e-mail from a person who lives in a hole in the ground. TON-duhhhhhhhhhhh complained that He couldn't get a picture of me for his masturbation sessions, I supose, and now he lies and says he has a picture of me in a window in front of my house. He neglected to say that there is an awning that obscures part of the view inside the house. His mickey mouse photogrophy techniques are marginal, so some digital enhancements and a few lies help soothe his misrably low ego. I don't know why he didn't mention that _his_ goofy looking face looked like it had seen the business end of a shovel applied vigourously. After his little stalking incident which he engaged in illegal wiretapping I left the boy alone. Now, he wants to start it up again, or is being coerced by loser Lloyd.
Hey Lloyd, you learn that code yet?
<snicker>

899. Geriatric Code Speed

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-05 00:00:00 UTC
From: 20wpm_extra@my-deja.com
Message-ID: <84uilq$5ni$1@nnrp1.deja.com>
Source record: 123021
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Extras, extras read all about it.

Yes, now you can be assured that your licnse is worth as much as a ham license in Sweden, or maybe Guatemala. Perhaps you'd prefer to pretend you're in Jordan as a member of the royal family where handouts are common.

Think of the effects this will have:

ARRL staffers can get out there and say: "oooo we tried so hard to protect you from the FCC" while they wink and kiss their ever blossoming sales receipts from the increase in book sales. God, will they make a revised 99 dollar video course fast enough ???

The lazy twit who takes 35 minutes (I think that's what the back of the last 610 said) to type out 6 text fields now only has to deal with 3 license classes.

Think MONOBAND. The companies like Radio Shack and Uniden who brought you complete crap rigs with 25 watts can now annoy the shit out of those of us running that big 100 watts by selling them to lids, kids and space cadets for 300 bucks. Can't afford a real rig to go with your welfare license ? No worries, just buy a ninth of a rig.

Think more "Q's". See those ARRL DX clowntest scores skyrocket with no outlay of money on the part of Dave Sumner and his Merry Men.

Think pileups. The FCC isn't using that new log periodic they just installed for Riley Hollingsworthless to play with. Or else D'Wana Terry, the career bureacrat who left the FCC after starting this mess would've known they're bad enough already.

Think affirmative action. D'wana Terry. Need I say more ?

Finally, think of this. Hollingsworthless was too damn stupid to pass the 20 wpm or too damn lazy and bent the ear of the decision makers to get himself a dumb-dumb's upgrade to Extra.

Why would today's prospective ham care? All he knows is that it's a shitty connection. Like when you have a bad phone line. Or there's too much &^$%&^$% static on the radio.

He doesn't know anything about propagation. MUF is an erotic term from college. All he knows is that he's "getting bad reception."

With the new restructing, manufactures of amateur radio gear will have to start installing roger-beeps and other noise toys in their radios (the fart sound seems to be a really big hit with the other crowd that will soon be joining the amateur ranks). Also offering high-power class C amplifiers (more efficient you know), with lots of "pills", that they can try to push SSB signals through so they can splatter all over the band like they do on 11 meters. The ARRL will need to include a section in the handbook on how to trim your coax to reduce your "swrs". In the section on dealing with TVI and RFI will be a paragraph on how to tell the neighbor you are interfering with to "f**k off." And as far as these new cbers with a license operating on frequencies other than those allowed by their license class, the standard answer is "I paid for this radio and I can talk any channel it can transmit on." "If I'm not supposed to talk on them other channels then why are they in my radio?"

Welcome to the new amateur radio.

Three of us took the General test Tuesday Ed. There were more people there
than I have seen since I have been going there to take the test. The VEC ask
if anyone wanted to take the Code test there were no takers. All were there
to take the General, Advanced or Extra test. So upgrades are going to go up
from what I saw.

I suspect there will be quite a few taking the five word per minute test
next month after they have a little time to get ready for it. Most of the
people at the test gave the advanced a try after they took the General so I
suspect that most of them will be back if they did not pass after they have
a little time to study.

Lying is another concept, Rich. Let's not substitute the word "lying," which is intentional, for error in judgement, which isn't.. Lacking resources and given the strong need, yes, I believe Riley should act to the best of his ability with the full agency power of the FCC behind him. After all, his actions are reversible. In fact, he is prone to reverse course when appropriate.

In contrast, consider someone from history acknowledged as much greater than any of us: President Abraham Lincoln. Under the Lincoln administration, William Walker, an African American, was executed by firing squad without full due process. Lincoln was bound to review all military executions but didn't have the luxury of doing so in the Waler case. Today we'd call Walker a Civil Rights hero, as his crime was protesting government repudiation of its contract to pay black soldiers at the same rate as white soldiers.

Think it over Rich, and I'm sure you'll find it in your heart to reverse direction, and we'll all live happily after..

Not ashamed, just rational enough not to want to identify themselves
so criminals can steal their guns. If you had the Hope diamond at
your house, would you you be ashamed to publish that fact?

<dmbrodbe@mtu.edu> wrote:

Don't underestimate how quickly/cheaply devices can be produced. Take
the Direct Broadcast system for example. Inexpensive was they key; they
ended up with a stamped metal dish and a $35 LNB (net cost). You can
still spend a few hundred on an LNB for TVRO, yet one for DSS is a tenth
of that to manufacture.

Money comes from other areas as well; just because the GPS capability
costs aren't absorbed by the end user doesn't mean production costs
haven't been offset elsewhere. Some group like Motorola could step in
with their "Jupiter" chipset and agree to produce a
cellphone-integrateable circuit for very little so long as certain
advertising agreements are adhered to. (ie: 'Motorola' printed on most
every phone out there, despite who made it).

Also, when you are talking about something as expansive as the
cell-phone market (I read there are more of them installed than TV's!
Projections claim that there will be 3 cell-phones per TV by 2005).
Individual unit production cost drops sharply when you are producing
millions and millions of them. Personal GPS's just aren't selling in
these numbers.

Just my .02 worth of banter...
73

You should not fuse the negative lead. It doesn't do any good anyway. If this fuse opens up, you are likely to continue to have a return path for the current through the shield of your coax and/or your radio mounting bracket. This can result in damage to your radio as much higher currents are present than PC board traces were designed to handle.

Please publish a list of the "dozen engineers that you personally know who will now get their General" (your words) because they do not have the ambition or aptitude for 13 WPM but can learn 5 WPM (my words).

Personally, I always figure if I can afford the equipment, I can afford to
"play" with it. License or not....I question how many CB'ers would spend
the money it takes to operate amatuer radio. Big spread between an ICOM,
etc..
and a Cobra...$$$$..etc. I've found "hams" on 11 meter regularly.... Not
to many "CB'ers on 80 meter however. I never figured CW stopped CB'ers..
money did.

The real question is, because you can afford it, does that mean you know how to
operate it?

> I question how many CB'ers would spend
> the money it takes to operate amatuer radio. Big spread between an ICOM,
> etc..

You must be living in a cave somewhere CB'ers spend big bucks on "Moonraker"
type antennas and will thousands on accessorys and amps (usually not tuned or
filtered properly) What on earth gave you the idea that CB'er were cheap and
that ham radio was expensive?

> �
> and a Cobra...$$$$..etc. I've found "hams" on 11 meter regularly....

Count me in, the best road avisiorys are heard on Channel 19 without question.
So what does that mean?

> Not
> to many "CB'ers on 80 meter however. I never figured CW stopped CB'ers..
> money did.

Perhaps it was the fact that you had to actually pass some sort of exam that
stopped them? Could it be?
Any that have a technical interest in doing something with radio will upgrade
to an amateur ticket.
The argument that money stops them is ridiculous, you can buy used ham gear to
put you on 80m CW for next to nothing. I picked up a Heath Cheyenne not too
long ago for $30 with power supply. Thats 90W (input) of AM and 5 different
bands.
There are tons of different combinations of used gear that can put you on the
air with antenna for WELL under $100.

Where can you find a 60W output CB transmitter for $30?

Brings up an interesting question, will those who pass the Extra exam now be given credit when the new licensing structure is in place. I understood that the question pool would change completly. Any know for sure?

I agree. Using the Internet is fairly easy. But understanding how it
works isn't. Doing something other than using various client apps, such
as setting up a server, creating CGI scripts, developing Web apps and
the like are far harder than getting any ham ticket and going out and
buying the lastest Yeawooodcom radio and getting on the air.

But Java has nothing directly to do with the Internet. It is a
programming language. It can be used via the Internet or not, just like
many other programming languages. You're far more likely to encounter
Perl on the Internet than Java.

Actually I am wondering if this is true or not. The ARRL announcement said all Advanced class amateurs have a window until April 15th to take element 4B to upgrade to Extra on the 15th.

However, after reading through the 70 pages which comprise the FCC R&O, this does not seem to make any sense. On April 15th, all Advanced class amateurs lose credit for element 4A since it no longer exists. The upgrade path after April 15th for an Advanced class amateur is the same as that for a General class amateur, take the new element 4. This is according to element credits defined in the new section 97.505(a)(1) (page 68 of the R&O). So, IMHO, having a CSCE for element 4B will not confer credit for element 4A AND since credit for element 4A is not recognized after April 15th (paragraph 52 of the R&O), how can 4B be applied for an upgrade? It does not exist either after April 15th. The specific language from this paragraph states; "However, licensees who, in the past, passed a written examination element that no longer exists or has been subsumed in a more comprehensive examination element, will have to pass the new element. In this regard, we note that licensees who are required to pass a written examination element that, in part, may include material they have been tested on previously, such as Advanced Class licensees upgrading to the Amateur Extra Class operator license, receives the offsetting benefit that they can upgrade their license class without having to pass a higher speed telegraphy examination."

I did write a note to vec@arrl.org asking if they could explain how this would work. I have not yet received a response.

Hmmm. And I thought accomplishment in Amateur Radio started AFTER you were licensed (like building, experimenting, DXing, Elmering, etc.) Judging one by the class of licence they hold (not to be confused with the class THEY have) is like judging a book by their cover. Get to know the individual first.

Which is? And when were you licensed?

The really old fashioned way required 10 WPM - sending and receiving.
And the question pool was NOT published. You were required to draw
schematics as part of the written test.

Not unless you were licensed before WWII can you claim to have got yours
"the old fashioned way." Now quit YOUR prancing around.

It's still a stupid idea that will do nothing to change the attitudes
which you find so distasteful. In some ways it puts you in their league
- resorting to silly verbal barb battles.

What bunk. I have a 1x3 call and am an advanced.
I have NO intention of changing my call of over
40 years if I upgrade to Extra.

Anyone that relies on call signs to establish if someone
is or isn't operating in allowed frequencies is a jerk.
Indeed, there are many others that have NOT
changed their call from a 2x3 just because they
upgraded.

Cheers,
Bill K2UNK

TON Duhhhhhhhhhhh (N8WGM) is a wannabe survivalist and detective. He tried to stalk me and harass me by telephone. Additionally, he tried to ILLEGALLY TAPE RECORD my phone conversations, without my permission, which is wiretapping. He's obsessed with me and would go to great lengths to take my picture for whatever reason. I speculate he wants it to masturbate to. One can only guess why he wants to live in a "house" built underground, but maybe it's because he's lower than a snake's belly.

No, I did NOT say that anyone that does not share *MY* personal views is
an old fart. I said that anyone not willing to be open minded, tolerant
and non-prejudicial, was an "old fart" Maybe I used the wrong word.
Maybe I should have just said "Bigot". Look up the definition, and then

try to tell me that many of these guys (including you it seems) do not
fit the definition. And THEN tell me that I'm "arrogant". If the truth
hurts that much, maybe you should re-evaluate your point of view.

>

Bummer! The world is full of people that may not agree with your view of
things. I see it as you have 2 choices. Accept, tolerate, and
understand, or stick your head in the sand and be miseable. Which will
it be?

As to liking me or not, that is your choice as well. I certainly won't
lose sleep over it. As for tolerating me, well, as long as you continue
to read, you'll have to tolerate me, and others, who don't share your
views. That's life. Since your arguments thusfar have been based on
opinion and emotion, you cannot "win" the debate. If you'd like to
debate this on a factual basis, I'd be up for the challenge.

> radio (leaving more room for the "rest of us").

I never implied that I was the all mighty "arbiter". The prejudice is
blatently obvious in those who will not tolerate others' activities,
simply because they don't fit into their own narrow viewpoints. Don't
shoot me for being the messenger. I only speak what I see. Because you

refuse to see it, or try to rationalize it any number of ways, does not mean that it isn't there. If it walks like a duck, swims like a duck, and quacks like a duck, it certainly ain't no chicken...

Whether or not someone "throws in the towel" or not is their own choice. Personally, I'd rather see them leave the hobby in disgust rather than have to put up with their pompous, arrogant, superior egos, on the bands. That type of grandstanding does nothing good for the hobby. Get over it, move on, or move out. Simple as that.

>

> Agreed but I don't need to throw in a towel, sell my gear or to like any
> one of them.

That's up to you. Stay if you want, but don't preach to the newcomers how much "better" you are simply because you mastered an obsolete telegraphy skill. It won't mean much to the guy designing digital audio compression algorithms.

>
> > Bottom line: your opinion is irrelevant. The law is the law.
>
> Oops. You don't get to decide what is irrelevant and, in this case, the
> regs are the regs.

The regs say that new hams need only pass 5 WPM to become licensed for the whole anchilada. Therefore by extension, whether or not you believe that they are "real" hams or not is irrelevant. It's not up to me to decide it. The FCC already has.

>
> > >

And we've alrady determined that what you think is irrelevant.

>
> > >
> > > Strive to be mediocre!
>
> > Seems to have worked well for you.
>
> Dave, I've passed all the written exams and a 20 wpm code exam.

Whoopie! That and buck will get you a cup of coffee and 2 hot dogs at the local mini-mart. It's a shame that all that testing and code skill haven't taught you to be more accepting of differing viewpoints.

> I've never settled for mediocre in anything I've wanted to do in this life
> and I've never asked for anyone to make something easier for me because
> I couldn't handle it.

And if everyone thought like you, we'd still be shoeing horses, lighting flares at intersections, when we cross, as well as doing a lot of obsolete things. At some point, the rules have to change to track with improvements in technology. At some point, we have to acknowlege that morse telegraphy is just as old and obsolete as horses and buggies. So at what point do we finally stop testing for it? Do we dogmatically continue to test for CW into the 24th century when people are Star Trekking around the galaxy? No one is demanding "easier access" to ham radio, just access that is more in line with the technology of TODAY. You can give me the toughest theory exam that is relevant and I'll study for and pass it, because that is what is required TODAY.

I am a man of principles. I just couldn't see the relavance of CW. I refused to allocate slots of my precious time, to learning a skill that was of NO use or value to me. I had a choice. I could either give in, and waste time learning it,for no reason other than to get over a "hurdle", or be satisfied with technician plus privileges. For 18 years I have been satisfied. I knew that this day would come eventually. Now it's here. All I can say is "it's about time!"

It's unfortunate that the FCC didn't revamp the theory tests. They are way too easy now. I passed all of the current the internet sample tests without even studying them first. But it seems that the FCC is mostly interested in making their administrative jobs easier.....

The cb band is a perfect example of what kind of radio operation that
low (read that no) requirements makes.

>
> Oh, well, ham radio is a dead hobby.

The new structuring will certainly bring more people into amateur radio,
but you are correct, real ham radio is just about gone.

How do you prove you're a tech+ today? Your tech license was issued when all techs had to pass the code test. How are you listed in the FCC database?

Unless I missed something in the R&O, the issue date on your current license proves that you passed 5 wpm. You are a "tech plus" and can stay one forever. Even if you don't go for an upgrade after 4/15, your license will expire in July (10 years, right?). Your "tech +" license is still renewable. When they send you the new one, it will say "Technician Plus" because that's what you are. The R&O does not eliminate any existing license classes or privleges - they just won't issue any NEW "novice", "technician plus" or "advanced" tickets after 4/15.

I think I should also state that I am in support of the new reduced code speed. I see no reason for a requirement for higher speeds to obtain a higher class license. Anyone can learn 5 wpm and for those who like to operate CW will do so and increase their speed because that is what they want to do, not because they have to to qualify for some higher class of license. Those who do not like to operate CW won't and that is just fine also. The problem is the multiple guess exam that anyone can pass by simply memorizing answers. There are Extra class hams who don't even know which end of a soldering iron gets hot, some can't even recognize a soldering iron. I hear new hams on 10 meters on ssb in the cw portion of the band because they don't know where the phone portion of the band starts. We need better testing of radio theory and operating procedures. It needs be to harder, not easier to get a license. Your are less likely to abuse something you worked hard to get, but we will always have the wellfare mentality of those who want everything handed to them with no effort on their part. For those types, the cb band is just what you want and deserve.

And I also have the exact same problem as you have NeXus with code and I have held my T+ since 1974. Knowing that I will be upgrading this spring to general I already bought a new tri-band beam to put on my 50' tower. I will now begin to take a much more active part in a hobby that I enjoy by joining a local ham club and taking part in passing traffic, etc.. This will also enhance my operation in the communities emergency management command post operation. I am the EMA Coordinator where at the present time along with all the county and state radios, I have both 2 and 440 radios in operation, now I will put up a long wire on the roof and install an HF rig for emergency work.

NeXus, the very best to you and congratulations.

David Castle was "caught in the act" by Riley? *yawn* Nothing will come of this. Castle is a sacred cow. FCC had him before and suddenly "rescinded" the action against him. You've got a better chance of winning the lottery than of seeing enforcement action being taken against Castle.

Very nice magnet you have there. An acquaintance of mine, some years ago, wrote one (though he, naturally, hadn't heard of "Echelon" by name at that time) in software that varied the words with every post.

Let's try some more... semtex Qadaffi Mossad fuse timer double agent shoulder-launched stinger NCI flight 800 IRA revolutionary government hostages Wayne Green non-negotiable demands Hezbollah uncrackable encryption Tiny-Tenna one-time pad

And, you're right, society is fracturing more and more as the billionaire elite tries to force incompatible peoples together and centralize their power. It seems a contradiction, but it's a natural reaction to the fall of the old order, and the attempted imposition of a profoundly unnatural one.

In the "bad" old days, the power structure and culture of the Old America were more naturally attuned to the needs and inner nature of the then far more homogeneous American population, and the "order" and unity of society were far stronger -- even though the government was smaller.

And though, again, it seems a contradiction, such natural order makes a fertile ground for real freedom, since when values are shared and genetic quality is reasonably high, fewer laws are needed.

Cheerio,

Hmmm... Joe, you seem to be arguing that letting each nation have its own government is a _bad_ thing and that having them subsumed under an empire, as some Serbs might want, and which the Turks and the Communists actually did, is a good thing.

I'd say that forcing those peoples together under the rule of outsiders or one or another of their own gangs, when they clearly didn't want to be together, is the root cause of much of the conflict there. But I'm not sure either your ideas or mine are sufficient to solve the problems of the Balkans.

Just how far would you carry your idea of non-self-determination? A world empire?

With all good wishes,

963. Help adjusting LCD display

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-06 00:00:00 UTC
From: Sterling Sudweeks <sudweeks@niehs.nih.gov>
Message-ID: <3874DAB9.3AAB0DFF@niehs.nih.gov>
Source record: 122753

I have a Kenwood TH-78A that has a problem with the LCD display. Most of the vertical lines on the display don't light up, but the horizontal ones do. If I reset the memory, the display lights all possible lines on the LCD for a short period (as it's supposed to do) showing that they are capable of lighting up. I have sent the radio in to Kenwood twice for service, and the problem has come back after each time. The repair report simply says "Adjusted LCD display" and no new parts are listed. Does anyone know how to adjust the LCD display? Thanks for any help.

In the 60s, I went well past the 13 wpm requirement for a General; others of my friends did not. Although I expect that fewer hams will advance past 5 wpm than chose to advance past 13 wpm (for a number of reasons), I don't think the number who do choose the mode will be insignificant. How big that number is will depend less on code testing and more on elmering, encouragement and mutual respect than it does now.

Many of us "old farts" think so too, and that's why we
wrote comments to FCC in support of a 5wpm General class
license. What we DON'T see is the lunatic change that
essentially turns the entire ARS into one huge
Novice/Freeband.

970. Re: How about a new HF mode: digital voice

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-06 00:00:00 UTC
From: phil-news-nospam@ipal.net
Message-ID: <UB5d4.54$a1.281@newsfeed.slurp.net>
Source record: 122760

On Wed, 05 Jan 2000 19:31:00 GMT Kevin Alfred Strom <kevin.strom@innocent.com> wrote:

| Such wideband digital systems are interesting, as they disprove the
| canard that increasing the bandwidth must always decrease the
| signal-to-noise ratio.

You can improve your signal-to-noise ratio by increasing the amount of signal. Obviously, turning up the power (such as a better gain antenna) is one way to do that. Another is bandwidth redundancy. Redundancy actually takes place in a number of ways. Consider the scenario of transmitting the exact same signal on two frequencies at the same time. If the receiver combines these two signals in a correlated way, the signal increases 2.0x while the noise increases only 1.4x. Voice has a finite amount of information and it is principly in a narrow audio spectrum. Opening the receive filter any wider lets in more noise without much more signal. So in that sense more "bandwidth" does not mean more s/n ... it means less. However, if there was indeed redundant signal there, it would make the s/n go up.

FM is an example of a redundant modulation. Most of us understand FM as a constant amplitude modulation which allows squashing a lot of noise via a limiter. But that limiter is in a sense (mathematical sense) performing intermodulation between redundant components in the whole signal. If you ever look at the variety of sidebands that FM has, you might be able to see that redundancy is indeed there.

| There is no reason why HF could not be used with what amounts to a
| digital multiple frequency diversity system, in which "channels"
| would be separated by timing instead of by frequency.

Syncronizing them at different sources would be a stumbling block.

| The problem is that they are incompatible with current systems.
| Proponents may claim that SSB, AM, and CW users would only notice a
| "slight increase in the noise floor." But what if the spread
| spectrum transmitter is located in the next block?

The "slight increase" is incremental by the number of signals present.

| Narrow-band digital is another story. Broadcasters are now getting
| 8-kHz good-fidelity audio out of standard phone lines. I see no
| reason why similar techniques couldn't work for 3-kHz HF voice
| channels, though decoding simultaneous transmissions might be a real
| stumbling block -- the brain does pretty well with that on analogue
| channels.

QR[MN] isn't all that bad on most twisted pairs. So pumping 56kbps
data down the line with 128 voltage levels at 8 kHz isn't too hard.
On HF, the picture changes. But it certainly does sound like a fun
challenge. I just don't want people to think it's going to be a cinch.
I'm considering 160m for some ideas of my own.

I've also got another idea for majorly improving s/n ratio, but I will
have to build some custom circuits of a new kind and/or use a lot of
CPU/DSP power to do it. I could discuss the idea with those who do
understand signal modulation in terms of sinusoidal vectors.

> several NCI BOD members in the references.

I stand corrected. In addition to the one NCI citation in which the FCC takes exception to NCI, the footnote for paragraph 32 "Some commenters state that the only telegraphy speed should be 5 WPM", has a list of 22 commenters among which is NCI. Padding the list is Bruce Perens, and Carl, and perhaps other duplicative efforts by individual amateurs who happens to also be on the NCI board.

A total of 2 citations out of maybe 200 in the telegraphy section, and we're supposed to thank NCI for getting us the new code regulations. I'm sorry, Bill, but I don't see that as being very convincing. The logic for removing code speed incentives were better presented by Gary Coffman on this newsgroup some months, even years ago.

>> That's one of the chances you take belonging to the 2nd Amendment
>> militia. Put better locks on your doors and get a dog.

>What's the matter, Jeff? You want to do away with The Constitution?

Not at all. In fact, I'm trying to draw your attention to the FULL
text of the Second Amendment. You get to own a gun so we have a
well-armed militia. Are you ashamed to let the public know you're
an armed member of the Second Amendment militia?

>Here's the other side of the coin. When a robber doesn't see your
>address on the list, he knows you are not armed. Think about that.

Locks, dogs, and video cameras do a better job scaring off the
bad guys, and no one gets hurt.

Jeff

You don't have to know ohms law to be a current extra yet some are
still to lazy or inept to make the grade.

That existing advanced class ham should take element 4(B) immediately
and so be eligible for an extra class license in April.

It's a secret covert organization. (They paint their helicopters black too.)
You know those Samoan security guards you mentioned? Turns out they're
Lieutenants in the 2AM (2nd Amendment Militia). I gave the brothers the
word...

>That's a pretty sorry group of bums. They'd never make it in the real
>military.

When all those real military people leave the service (when the hitch is
up) or retire, do you really think that all of them get rid of their guns?
If they decide to keep their weapons, do they immediately become a "pretty
sorry group of bums" that would "never make it in the real military"?

should be a plug in the firewall that you can
remove to run the power directly to the batt.

put the main unit under a seat. mount the head
unit on a gooseneck. get a magnet mount mic 'hook'
so you can put it on the backside of the head unit
mounting bracket.

that's most of it. works well in my dakota.

[...]

I don't know about all the other incidents to which you refer, but when WA9KJI was cited for monologuing and intentional interference last May, it didn't require "bogus information" from anyone to establish his illegal behavior -- Riley Hollingsworth was checked in on the frequency at the time.

It's true that a (probably doctored) tape and an affidavit later caused Riley to give someone who didn't deseve it the benefit of the doubt (that he "really was in QSO" with someone that neither Riley nor anyone else could hear).

But K4ZDH was on frequency when Dave misbehaved on May 1. And K4ZDH was on frequency in person yesterday -- when Dave was jamming again.

With all good wishes,

Kevin, WB4AIO.

RESTRUCTURING.
> >

There isn't any change there with restructuring. New licensees
will be issued systematically calls appropropriate to their license
class. Being that no NEW license classes were created as a result of
restructuring, the current system will continue and those licensed
after April 15th can apply for vanity calls once they are in receipt
of their license. I.E. a new technician class licensee who is issued
a license after April 15th can apply for a vanity call from Groups
"C" or "D" once they have their original license. Being that the
advanced class license will no longer be issued after April 15th
to NEW applicants, new applicants will have to upgrade to extra
to be elgible for group "A" or "B" calls. So a NEW extra class
licensee after April 15th will receive a systematically assigned
from group "A" if they are still available in the applicant's
region, or a systematic call from group "B" if group "A" calls
are no longer available in that region. But the licensee can apply
for ANY unassigned call that is available to amateurs within CONUS
if the applicant is applying from CONUS.

Before this rules change, the FCC had issued a syllabus
which included the subects which each class of applicants
would be tested, the number of questions in each category
for each class of license, and in what proportions of the
whole test each would consist. With this ruling that
syllabus is withdrawn (exsept the number of questions in
each test element, which was reduced), and the entire issue
of "what is tested for" was left up to the three-person
Question Pool Committee, including W5YI..... guess what?

*I think you both are wrong. The blame needs to be placed here in
*the amateur community. Not much impute from the ARS concerning the
*changing of the ARS license system. The FCC read the impute given
*them and realized that the 'majority' wanted to dumb down ham radio.
*
*
*
*D
****

If you took time to read the original docket you may have read the section where they sought comment on how many license classes should there be. The FCC even last August was leaning the the possibility that three classes of license was a possibility. There is no blame on anyone. This i ssomething that was bouond to happen. No matter how unpopular it may be it was going to happen. At this point you have only two options, accept it and keep operation or reject it and let your license expire.

*>
*> WA4BZJ
*>
*>
*>
*> *
*> *
*> *NEWINGTON, CT, Dec 30, 1999--Amateur Radio will get a new look in the new
*> *millennium. The FCC today issued its long-awaited Report and Order in the
*> *1998 Biennial Regulatory Review of Part 97--more commonly known as
*> *"license restructuring." The bottom line is that starting April 15, 2000,
*> *there will be three license classes--Technician, General, and Amateur
*> *Extra--and a single Morse code requirement--5 WPM.
*> *
*> *"We believe that an individual's ability to demonstrate increased Morse
*> *code proficiency is not necessarily indicative of that individual's
*> *ability to contribute to the advancement of the radio art," the FCC said.
*> *
*> *Besides drastically streamlining the Amateur Radio licensing process, the
*> *FCC said its actions would "eliminate unnecessary requirements that may
*> *discourage or limit individuals from becoming trained operators,
*> *technicians, and electronic experts."
*> *
*> *Although no new Novice and Advanced licenses will be issued after the
*> *effective date of the Report and Order, the FCC does not plan to
*> *automatically upgrade any existing license privileges. The
*> *ARRL had proposed a one-time across-the-board upgrading of current Novice
*> *and Tech Plus licensees to General class, but the FCC declined to adopt
*> *the idea. This means that current licensees will retain their current
*> *operating privileges, including access to various modes and subbands, and
*> *will be able to renew their licenses indefinitely.
*> *
*> *Starting April 15, 2000, individuals who qualified for the Technician
*> *class license prior to March 21, 1987, will be able to upgrade to General
*> *class by providing documentary proof to a Volunteer Examiner Coordinator,
*> *paying an application fee, and completing FCC Form 605.
*> *
*> *The FCC's decision not to automatically upgrade Novice and Tech Plus
*> *licensees means the current Novice/Tech Plus HF subbands will remain and
*> *not be "refarmed" to higher class licensees as the ARRL had proposed. The
*> *FCC said it did not refarm these subbands because there was "no consensus"
*> *within the amateur community as to what to do with them.
*> *

*> *As it had proposed earlier, the FCC decided to lump Technician and Tech
*> *Plus licensees into a single licensee database, all designated as
*> *"Technician" licensees. Those who can document having passed the 5 WPM
*> *Morse code examination will continue to have the current Tech Plus HF
*> *privileges. "If documentation is needed to verify whether a licensee has
*> *passed a telegraphy examination, we may request the documentation from
*> *that licensee or the VECs," the FCC said.
*> *
*> *In addition to reducing the number of license classes from six to three
*> *and eliminating the 20 and 13 WPM code tests, the FCC also will reduce the
*> *number of written examination elements from five to three, authorize
*> *Advanced Class hams to prepare and administer General class examinations,
*> *and eliminate Radio Amateur Civil Emergency Service (RACES) station
*> *licenses. RACES will remain, however. "After review of the record, we
*> *conclude that we should eliminate RACES station licenses because RACES
*> *station licenses are unnecessary for amateur stations and amateur service
*> *licenses to provide emergency communications," the FCC said.
*> *
*> *Under the new licensing scheme, there will be four examination elements.
*> *Element 1 will be the 5 WPM Morse code exam. Element 2 will be a 35-
*> *question written test to obtain a Technician license; Element 3 will be a
*> *35-question written test to obtain a General license, and Element 4 will
*> *be a 50-question written test for the Amateur Extra license. The FCC has
*> *left it in the hands of the National Conference of VECs Question Pool
*> *Committee to determine the specific mix and makeup of written examination
*> *questions. Current Amateur Radio study materials remain valid at least
*> *until the new rules become effective in April.
*> *
*> *The FCC's new licensing plan means someone will be able to become a ham by
*> *passing a single 35-question written examination. The plan also simplifies
*> *and shortens the upgrade path from the ground floor through Amateur Extra-
*> *-especially since amateurs will only have to pass one Morse code test.
*> *
*> *Elimination of the 13 and 20 WPM Morse requirements also means an end to
*> *physician certification waivers for applicants claiming an inability to
*> *pass the Morse code examination due to physical handicap.
*> *
*> *The effective date provides a window of upgrade opportunity for current
*> *Advanced licensees. Between now and April 15, current Advanced holders may
*> *take the existing Element 4B, a 40-question test, giving them credit for
*> *having passed the current Extra written examination. Likewise, holders of
*> *a Certificate of Successful Completion of Examination (CSCE) for Elements
*> *3B or 4B dated on or after April 17, 1999, will be able to qualify for
*> *General or Amateur Extra respectively when the new rules go into effect on
*> *April 15, 2000.
*> *
*> *The FCC disagreed with the League's suggestion that it undertake a
*> *restructuring of operating privileges along with licensing restructuring.
*> *"We believe that in light of ongoing discussions concerning implementation
*> *of new and more modern communications technologies within the amateur

*> *service community, we should accord the amateur service community an
*> *opportunity to complete such discussions and possibly reach a consensus
*> *regarding implementation of new technologies before we undertake a
*> *comprehensive restructuring of the amateur service operating privileges
*> *and frequencies," the FCC said in its Report and Order.
*> *
*> *In its amendments to Part 97, the FCC's Report and Order refers to a "Club
*> *Station Call Sign Administrator," something that does not exist under the
*> *current rules and which was not explained in the R&O itself. An FCC
*> *spokesperson said the Commission plans to issue a Public Notice soon to
*> *explain the program and to solicit qualified entities to serve as call
*> *sign administrators for club station applications.

Even if you strongly disagree with me, Eric, it would help if you understood me.

If we are to have freedom and self-determination for all peoples, that obviously includes White people, and even (gasp!) White Americans. So there's no contradiction despite your apparent insistence upon seeing one.

And there's certainly nothing wrong with having pride in one's racial family.

My maxim is this: Every people which thinks of itself as a people should, to the maximum extent possible, live under its own government.

As ever,

--

Kevin Alfred Strom.

Whatever the truth about the matters you raise, it is fair to say that you are not exhibiting contrition. In fact, the face of your posts shows you are challenging Riley, not, as one would expect, in your own matter, but in other matters.

Be clear, Rich, my friend. My call on this NG for reinstatement of your lost license assumed contrition. Since you are doing the opposite, you are ruining your own case, whatever grounds you may pursue.

Isn't it obvious that Riley is committed to a one man war on ham radio disruption? Isn't it obvious he is making his decisions quickly? And, finally, it has gotta be clear that he is willing to rectify any errors, as well as to give hams the benefit of the doubt. What else can we expect? (Please don't give me an answer that increases FCC expenditures unless you're willing to fund it.)

Riley is a one-man dynamo making giant strides at our hobby's purification. As in any judicial court, you need to submit to his jurisdiction as part of the agency regulating us.

Rich, if you want your license back, be fastidious about all of your conduct, especially these public posts. Riley is clearly looking to instill peer pressure in the ham community so that we'll be self enforcing.

As much as I feel a kinship to all hams, loathing license suspension or revocation, I must applaud Riley for his work ethic, perseverance, and accomplishments.

The above post really makes me want to vomit. It's this kind of liberal crap that ruined ham radio to begin with. "....oh, well, let's all be good amateurs and help those newcomers who are coming (flooding) onto our bands and who will be followed by others (some who probably can't even speak English!....) who do not have any proficiency of code.

The fact is, the liberal weenies have been destroying ham radio for years. And at the forefront of them is the ARRL who went from being

totally against a no-code license to totally in support of it in the course of time it took for one issue of QST to come out.

Why? Easy!

Because hams lost 2 megs of the 220 band. And the ARRL figured that larger numbers of hams would prevent any future loss of bands.

....the problem with the above is that "quantity" has NEVER been a good substitute for "quality" and I would take quality over quantity any day.

Hey you lazy weenies out there: The fact is, whether you like it or not, when the test for obtaining a ham license was harder, when the code test was harder, when you actually had to know some electronics theory and when you actually had to demonstrate such, ham radio was a much better hobby than what it is today.

In fact, if one could (or would) draw some sort of graph displaying how the hobby has deteorated, it would be an obvious display that such deteoration was strongest just after each and every time that the requirements for obtaining a ham license was lessened or "restructured".

After such, the line to that graph would simply keep plummeting down, steadily for sure.

Oh, well, ham radio is a dead hobby.

Oh, brother, the above listing has me putting several fingers down my throat to induce vomiting.

Hey pal! If the FCC (as spurned by the ARRL) did away with code altogether and allowed an open book 5 question multiple choice answer test, you would be reciting the same crap as you did here.

If a college was turning out grads who couldn't even spell or if a military was turning out soldiers who couldn't shoot straight....if a medical school was turning out "doctors" who were having trouble reading x-rays, do you think the answer or solution would be to lessen the requirements to obtain a degree? Or make any tests easier?

It was never difficult to obtain a ham license. All it took was dedication and discipline. And the desire to learn at least something significant about the radio art. There is nothing significantly useful about sending/receiving 5 wpm morse code or the lessening of the understanding of radio theory.

1016. Re: Tech+ to General

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-06 00:00:00 UTC
From: The NeXus <nexus@datasync.com>
Message-ID: <851ura$u7r$1@news.datasync.com>
Source record: 122806

RandyFlagg <dontcallme@iwontcall.you> hath said:
: I currently hold a Technician Plus ticket. The way I understand the new
: license structure all I have to do is pass the General written test & after
: April 15th I will be able to get my General ticket. Right? Or am I missing
: something?
: Thanks!

Thats correct, but why stop there? Why not go for it all and
get the King of licenses, get the Amateur Extra! Thats what I'm
doing. I've been a Tech for 11 years now, I was forced to take
the code, I'm glad I did but I never looked down on the no-code
techs when they came out. And I am simply overjoyed over this
new restructuring by the FCC. I took the code test simply to
get a tech license, at the time I was only interested in 2 meter
and still mostly do a lot with 2 and 440 now. But I have 3 HF
radios because my dad is an Advanced, and I loved working QSOs
on 10meter phone. I never kept up my code so its real poor right
now. I've tried a couple of times to work up to 13 WPM but just
couldn't do it. There are a lot of HF nets I'd love to get in
to, and being with RACES & ARES being able to operate on HF is
real important for passing traffic. I have a LOT of abilities
in passing traffic on emergency and non-emergency nets, BUT I can
not use it because I can't get 13 WPM. I know I can pass both
the General and Extra licenses but I can forget the code. So
this is why I'm glad this happened. I'll finally be able to make
a contribution to traffic nets and my area RACES & ARES by being
able to get on HF. Plus I want to get some awards that would of
been impossible on the novice portion of 10meters...

Allowing me to use the General and or Extra portions of the HF
bands with only 5 WPM under my belt isn't going to make me a dummy
or a lid, or a CB'er. Us techs and Novices aren't going to trash
the bands. We have all of you Generals and Extras trashing the band!
Need I mention 3950, 14313, 14270, 3853 etc etc etc. You've proved
that you don't have to be a tech or novice to act like a dumbass
cb'er on the HF bands.

I say BRAVO to the FCC, I thank the ARRL for their support in this
move, and I say BRING IT ON, BRING IT ON, I'm ready for it, watch
out HF here I come :))))))

What the heck does this statement mean Tim?? I'm a licensed Advanced
(Soon to be Extra)Class and I'm pretty savvy with a search engine but
I've never heard anything about this frequency..--

I got into Amateur radio because my father talked me into it and I
ENJOY the club I belong to and yes, the local Radio Shack carries info
on our club. They also sell quite an assortment of antenna supplies as
well as Icom radios.

We've got old timers in our club and sometimes they don't acknowledge
my presence but you know what?? You can always find them on the radio
during that 2-4am shift at your club station.. you know, the one that
no one wanted to work?? We count on them a lot for working shifts
during the two week long yearly commitment our club makes to the Yukon
Quest Sled Dog Race..

I think my club is a rare one indeed but you know what?? When I leave
hear and join another club, I'm going to do my best to make it as good
as the one I'm in now.. That's how I'm going to contribute to the
hobby..

: Dave S.

I think you're jumping the gun just a bit, first off
YOU DON'T KNOW ME, or what kind of person I am. How
dare you make assumptions that I'm going to be throwing
anything in you're or anyone's face about the fact that
I got an easy way up. I passed my license 11 years
ago and I just can't get up to 13 words a min, heaven
forbid 20. I'm a damn good operator, and I'm civic-minded.
I'm not the lid or CB'er you people make us Techs and
novices out to be.

I don't know what kind of hams you have where you live
but if they are the snobs you seem to think they are well
just say to hell with them and ignore them and move on.

There are a lot of Novices and Techs and Tech-Plus that
are fair and kind and only want to enjoy the hobby and not
hurt it, and I think the FCC finally cutting back a difficult
restriction that is keeping me from a part of that enjoyment
is GREAT. I've always wanted to win some awards but its next
to impossible to get any working 10 meter phone only. I've
always wanted be a part of HF traffic nets and emergency nets
but there isn't much for 10 meters so that excludes me. Not
any more though, and thats why I'm happy. I've spent 11 years
on 2 meters and I'm ready to begin talking on my collins Sline
and Kenwood TS450 on something other than 10 meters only when
the conditions are right.

And I promise you when I pass my Extra exam with my 5WPM code under my belt I won't be throwing it in your face, all I want is to be accepted as a seasoned amateur who has and will continue to contribute to the hobby to make it better, never to hurt it or anyone.

73 to you, and to everyone who reads this, and I hope to work you on the bands some day. Jimmy, KB5FSV

So there we were, holding a discussion of an enforcement action, when the aquelch broke and Kevin Alfred Strom, revealing total ignorance of facts, wrote in message <3874210E.2C6D2DEC@innocent.com>...
>> Kevin Alfred Strom wrote:
>
>Even if you strongly disagree with me, Eric, it would help if you

>Americans. So there's no contradiction despite your apparent
>insistence upon seeing one.
>
>And there's certainly nothing wrong with having pride in one's
>racial family.
>
>My maxim is this: Every people which thinks of itself as a people
>should, to the maximum extent possible, live under its own
>government.
>

Now that is an interesting philosophy. Actually, such conditions exist in several places around the world.

For example, we have the case of the former Yugoslavia where the three major population groups -- separated more by religion than anything else -- are the Orthodox Christians, the Muslims, and the Catholics. Each of them has their own school systems and, to some extent, their own territories. We see how well that works with Muslims being wiped out by Christians, then the tables turn and the Muslims settle the score. Seems to me that this is what's been going on there for 500 years.

In the former Yugoslavia there are three separate school systems and each one teaches that it's beliefs are true while the others are evil and cannot be trusted. This is what Mr. Strom proposes with his maxim.

Then we move to the lovely, peaceful, tranquil Middle East where, as we all know, various Arab groups and the Israelis live in peace and brotherhood in their own little enclaves.

Not that Mr. Kevin Alfred Strom's proposal is the dumbest thing I have ever heard, and not that it totally disregards history . . .

I think the turn of events on the amateur radio bands is symptomatic of
a
general "deconstruction" of society that seems to be getting more
common.

Every interest group, centered around whatever interest, whether it be
politics, religion, sexuality, white issues vs black issues,
nationality, cultural identity, ham radio's no-code vs pro-code,
tech's vs Extra's, etc all seem to be pulling into themselves as groups,
circling the wagons, putting out land-mines, and staking out turf.
It used to be white-flight to the suburbs and competetion to get your

children into schools outside one's own area because the better schools were always somewhere else.. Now it's "gated communities", and home schooling..

It seems to me that as far ago as the mid 1960's there was a trend for people to get along with one another even if they were different in some ways. To whatever extent that this has changed since, say 1967, society seems to be getting more and more divisive.

Amateur radio is a communications medium, and as such, we all have the freedom to discuss what we want over the air. NO.. Ham radio discussions are NOT limited to technical topics only. Being rude, obnoxious, and obscene over the air, for whatever reason, has no place in amateur radio.

Rather than jamming someone off the air because a specific person disagrees
with what is being said, the operator should have the intellect to challange discussion in a rational manner and add to a conversation rather
than censor it..

Anyway.. my 2 cents..

To a degree you are correct. I think that amateur radio is also a product of the times. Thirty years ago societal attitudes were completely different than they are now and, as you say, the amateur service was a much better place because of it---I am happy to have been a part of it.

You are correct in you observation regarding the general pattern of deterioration but there is more... Consider, deletion of log keeping, allowance of VFO, higher power and HF voice for Novices, the institution of the volunteer examiner rather than appear in person in a Federal building and taking the test in front of an FCC officer, call sign issuance changes which upset order in amateur recognition (beginning with 'N' calls in the mid-70's), slow and consistent de-regulation---and there is probably more I haven't mentioned begining with the loss of leadership from the ARRL and of course the profit motive which seems to dominate the present day amateur service...

I suspect that restructuring will result in temporary growth for it's new appeal, when the novelty wears off the active ham population will drop to a lower level than it is now---kinda like Cabbage Patch dolls. Most likely by then the INTERNET has taken hold and like all nice sheep we will be sending our messages via digital pathways that will be monitored; for reduction of crime and terrorism---and for the CHILDREN!

Interesting, I really don't think current amateurs would be so upset if restructuring brought a population of responsible operators. I feel that amateurs are a tolerant bunch but their (mine) fears of a CB invasion are justified. The technical aspects of amateur communications via mainstream amateurs has largely been resolved---I would like to see an improvement in the quality of communications to take place on the amateur bands. Sure, DX contests but how about an increase in sharing and understanding that usually develops from thoughtful conversation with stations here and abroad---the CULTURAL aspect of amateur radio. Really, who do we have to blame for loss of interest in the amateur radio service? Operators can only talk so long about their store bought radio, standing wave ratio and antenna before saying 73 and see you down the log. And to a large degree I blame the ARRL for this---maybe great with technology, but what about the human experience? In part they provided the tools but forgot about their use; besides contests, what to expect from a bunch of ARRL techie nerds anyway---not much in the way of literature, geography, history, religion, art, philosophy, geology, meterology..... We have received enough direction in how to organize electrical components on a pc board for some particular result, it's time to use that box of radio parts to maybe learn something about the geography of Morocco for instance.

I, and many of you, will recall our struggle studying for the code examination. All I had was an Ameco code record that I picked up at Lafayette and when I memorized that I made my own code tapes. Gee... 5 WPM... I passed the examination by mentally counting out how many dits or dahs a character had before I wrote it down on my answer sheet---but I made Novice and then Extra and eventually the FCC Radiotlegraph license as well.

That's what I find so odd, thumbing through any catalog or radio magazine (QST especially) I find a seemingly unending offering of code tapes, computer run code generators, code readers, classes offered for learning the code and that's not the end of it---telegraph keys, semi-automatic bugs and keyers, electronic keyers, memory keyers fancy custom made keys out of polished brass and rare woods costing hundereds of dollars---is there an end? WE DIDN'T HAVE THESE RESOURCES but we learned the code anyway so I ask, what is the problem with the learning the code today? A merchant sea captain went from knowing nothing about radio to advanced class operator in one stroke by mastering the code in a few months using code tapes and studying the theory texts---isolated example or initiative, drive and passion?

Thanks for all of your GREAT WORK the last few years, Bob. I can't wait to see the "hard copy" you received on your latest trip to the NY area!!!!

You have these BUMS on the run now, hohohoho. I have said this before......But it needs to be said again:

When you hear a GIANT mobile signal...THINK OF KT4TR
When you eat an orange...THINK OF KT4TR
When you see a Piper Cub...THINK OF KT4TR
When you eat at Outback Steak House...THINK OF KT4TR
When you DON'T hear WB2OTK...THINK OF KT4TR

KT4TR has & will always be a "BLAZING BEACON OF TRUTH" on 14.313!!!!

NO ONE has done more to expose the crooks, QRMers, idiots & assorted other "low class" people on the freq. OUR HATS ARE OFF TO YOU, BOB.

WE all can't wait 'till you get the Cub up in the air!!!!

BEST of the year 2000 to KT4TR, W4FQF & K3QAM (let's NOT FORGET Misty, also)

PITBULL

How about an existing advanced ham who wants a 2x2 call
after April 15?

Additionally,
I have been involved in projects which take LONG
periods before the ultimate result is realized.
I have been well rewarded annually for doing a good job
BEFORE the final conclusion of the project.

Cheers,
Bill K2UNK

This is another fantastic article from the The Spotlight, Page 2, January 3-10. Published by Liberty Lobby, 300 Independence Ave S.E., Washington. D.C.---20003 http://www.spotlight.org
Liberty Lobby is America's oldest American First/Patriot lobbying organization in Washington D.C. 45 years and still growing strong!

You just don't realize how good it is to be able to read the truth! I consider The Spotlight to be my premiere source of truthful information
about the political scene in America (and many other areas of interest) and the rest of the world. They have never let me down! They
have always proven to be the number one source of information that you
won't generally get through the controlled and dominated news mediums and other media and journalistic
sources. Made factually evident by some of the most professional journalism available anywhere. The Spotlight doesn't cater to or necessarily endorse the mainstream Republican or Democrat viewpoints. They are populist-based and make political decisions and other views strictly based on the populistic will of the American peoples. American-First at it's finest!

DISAPPEARING DRUGS

According to a General Accounting office (GOA) report, 28 percent of drugs seized as evidence by the Drug Enforcement Administration (DEA) have been mysteriously disappearing from four federal laboratories in Dallas, Miami, New York and San Diego. Of the 142 items weighed by GAO
investigators, 40 were off more than five grams. "The inaccurate recording of drug weights decreases DEA'S accountability over such evidence," the GAO reported.

********** I personally did a further search on the official United States Department of Justice Drug Enforcement Administration homepage. Acording to official 1998 D.E.A. drug seizure statistics, the D.E.A. seized the following amounts of drugs in this order, in Kilo's (2.2 pounds).

1. Heroin (D.E.A.) 364.2
Heroin (CO-OP) 260.4 HEROIN (TOTAL) 626.6

2. Cocaine (D.E.A.) 31,648.8
Cocaine (CO-OP) 38,792.1 COCAINE (TOTAL) 70,440.9

3. Cannabis (D.E.A.) 239,514.6
Cannabis (CO-OP) 124,566.5 CANNABIS (TOTAL) 364,081.1

4. Meth (D.E.A.) 1,217.4
Meth (CO-OP) 1,351.1 METH (TOTAL) 3,568.5

Without even trying to itemize prices per individual pound, which I don't know the street prices and not wanting to go to hightimes.com or somewhere else like this, this adds to approximately 438,717.1 kilos of illegal drugs the D.E.A. claimed to have seized in 1998. This equals approximately 965,177.62 U.S. pounds. At say $1,000 a
pound (which is not even realistic), you have over $270,000,000 but this figure on the street would easily run into the many U.S. $Billions.

This G.A.O. report is talking about four federal laboratories that give
an account of a smaller amount of the whole amount confiscated and nobody has an accurate ability to determine exactly how much of the confiscated illegal drugs are actually missing from everywhere else including other government agencies. At the 28 percent scale, approximately as much as 270,249.73 pounds of drugs that were actually
reported as confiscated could be "missing" and there could be many more
pounds that weren't accounted for.

1038. Re: Amateur Restructuring Announcement - RESULTS?

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-06 00:00:00 UTC
From: "T. Smith" <nospam@nospam.com>
Message-ID: <3874A0B3.52A6@nospam.com>
Source record: 122828
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.cb,rec.radio.scanner,rec.radio.shortwave

What results will restructuring have, what questions will be raised?

1. Where will all those antennas be erected now that zoning laws are a matter of fact in practically all communities and housing developments across the US. Will amateur antenna erection issues be subject to Supreme Court review and rulings.

2. Will the expected rantings and ravings of a hoard of cb'ers propagated world wide on the HF bands at the eleven year sunspot maxima make citizens and governing bodies of the US appear as chumps and cause a loss of face in the global community.

3. With the expected increase of operators will the FCC impose a reduce power limit so as to maintain appropriate RF field intensities in areas of human habitation---for the children.

4. Statistically speaking, will the increase of illegal activites that will accompany the increased population of amateurs be managable by the FCC---if they can't afford (funding, manpower) to manages the mess that they created what then.

5. What restrictions in advanced design of amateur equipment will be imposed now that manufacturers have been stimulated to produce by the creation of larger market demand.

6. Will amateur radio disappear into the 'noise' by a future FCC Report and Order that all amateur activities cease and desist and resort to channelized control of spread-spectrum modulation techniques to hide and get rid of the dirty little mess. Pass codes will be issued instead of callsigns to activate strictly regulated (FCC) communicators (ex-tranceivers).

7. Will all amateur HF allocations be eliminated and relocated to spectrum translators aboard amateur satellites operating at milimeter wavelengts.

8. Will amateur equipment contain embedded identifiers and GPS locators to control errant amateurs---computer databasing and issuance by violation notices by FCC or ARRL Official Observer staff (by FCC approval) at the mere push of a button by decoding an encrypted data burst piggy-backed with amateur transmissions.

9. Will we tire of 'smokey' reports from one end of the continent to another.

10. To ease congestion, will amateur VFO's (slyda's or sliders) be eventually outlawed and be replaced by channel selectors.

11. Will older amateur equipment at some future date be outlawed as the transition to controlled radio communications is established.

12. After April, 2000 will we find that an obtaining and possessing an amateur license from some third world country (like Somalia) where testing is more rigorous convey greater prestige to it's holder than to be licensed in the US.

13. To Be Continued...

1042. Riley Hollingsworth>>>>>>>>>>>>>>>>>>

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-06 00:00:00 UTC
From: rich7@my-deja.com
Message-ID: <850nk6$p9g$1@nnrp1.deja.com>
Source record: 122867

Does anyone not find it, rather peculiar that Riley accepts supposed incriminating evidence, from some of the worst Amateur Radio criminals? Let's look at the following, he takes WA9KJI, off the air for 2 years, with bogus information supplied to him by, N2SAG, W3KE, and known KKK member AA8DP, and when found out, had to reinstate David. Obviously, he failed to learn from that mistake, now we have 4 more yet to come. Next big mistake was NX9J, once again bogus information supplied by the likes of KT4TR, WA2EXQ, K3QAM, all part of the KV4FZ clan. Once again, Riley had to rescind, and put Bill, NX9J, back on the air, when the true facts were made apparent. One would think, that by now he would rely on his own monitoring stations. Let's not forget this one, KB4TEW, yes indeed, he again accepted bogus information supplied by the likes of W4FQF, KT4TR, WA2EXQ, K3QAM, and others to get Jim, put off the air. And yes, you guessed it, he had to put him back on the air, you ask why, yup you guessed it, they duped Riley again. Hard to believe? Let's talk about me, and the E-mail, that I never sent to Riley, which removed me from the Database. Gettysburg, requires, a registered and notarized letter, and your license enclosed, which never took place. Now let me bring you up to date with what transpired last week, with N9LAT. Once again, untrue, unsubstantiated information supplied to Hollingsworth by W2KP and others which would have required the gentleman to retest. Riley Hollingsworth sent an apology by virtue of the ARRL Web Extra. One thing I have learned about Amateur Radio, all Hams lie, whether it's how high your antennae is, or how many countries you just worked in a contest. If it is in fact true, Riley's claim of how great the FCC DF system is, why not use it? It's much better to let a guilty party go free, than prosecute an innocent one. A LIE, IS A LIE, IT MATTERS NOT WHO TELLS IT. Rich Whiten

This is a pack of lies from the get go Porkbutt!! NX9J was never off
the air, he had to retest. He was a qrmer on 14313. And he got caught.
He has toned down his act, and is now a good boy . KE4TEW. another
obnoxious qrmer begged Mr Hollingsworth to let him get back on the air
because his XYL was susposedly sick and needed his attention. (figure
that one), if she was sick , she didn't need "BOOMBOX" Jimmy screaming
and qrming and neglecting her. He is now on a one year probation out of
the goodness of Mr Riley Hollingsworths heart. You must be awful dumb
to think that after all your qrming,plus the fact that you and they
had been warned to knock it off,
did not get you and your boys into trouble. Now, we are down to you.
You cancelled your license and now you want to take it back. Sorry
Porkbutt, It don't work that way. Mr Hollingsworth is no fool, and you
should have thought of
that when you cancelled out.

I am sure he will note how dumb you think "YOUR NEW BEST FRIEND", Mr
Hollingsworth is. Quit blaming others for your troubles, you have been
doing that all your life. You better get a "REAL" Lawyer Your fellow
qrmers "Waiver boy WB3HGW DR Hate AF2Y, " NK4D, And Bob Sherin won't
cut it.

Thatsritepolly!! Herbie still here , Rich gone!!

Re power: Run the cables through the firewall (there is usually a way to
do it) and connect direct to the battery, with fuses on both plus and
minus wires at the battery.

All else is very vehicle dependent.

I put mine in a 96 Honda Civic. The rig is behind the driver's seat
with the front panel mounted at the dash. For that you will need the
optional remote kit. But with a truck, you might be able to get the
entire radio up under the dash.

I use Hustler antennas on a fold-over mast in a custom mount attached to
the frame and coming up behind the rear bumper. The Hustlers and
Hamsticks work well on 20 and up; for 40, and especially 75, you will
want a bigger/better antenna (e.g., Bugcatcher or screwdriver).

The real fun is often attenuating all the noise on receive!

Phil

Your old technician license would be valid as a means to show your passing
of the code exam, *IF* you had continuously retained any amateur license
since then, including the grace periods in effect during any lapses.
Since you allowed your license to expire, all credits not otherwise holding
their own (CSCE's hold their own for 365 days), and none did back then, were
lost with the expiration. I will further review 47-CFR-97 to be certain
this is my intrepretation, but this is what I recall from the last time
I read it (and I just downloaded a new copy from the Governmnent Printing
Office web site).

If you do not want to take a code test, you have additional choices
available to you:

3. Take the Technician written exam and become a no-code technician.
4. Wait until the entire code requirement is abolished. I suspect
this will be in about 8 to 15 years. It's not *if*, it's *when*.

If you want to pursue #2, you're only making shar^H^H^H^Hlawyers rich.
You can combine #3 and #4.

On Wed, 5 Jan 2000 13:01:35 -0700 Jack Malone <malonej@c2i2.com> wrote:

| ARRL IS VIOLATING THE SPIRIT OF PART 97 of Chapter 1 of
| Title 47 of the Code of Federal Regulations as amended:
| Part 97 - AMATEUR RADIO SERVICE

Yes, new callsigns should be restructured too. They should look like the
old CB callsigns of the early 1970's. This will work out OK because the
restructured hams won't be much smarter than your typical CBer anyway.

> (3 pin mains connector).

--> Is this the same thing we call a GFI (ground fault interruptor) in
the states? Kind of sounds like it. They are a good idea, though it
had never occurred to me to install one in the shack. Would be a nice
addition to any electronics workbench, too. They're required in
bathrooms and for outdoor circuits, in new construction, here.

Dear Kevin,
While intentional jamming of amatweur frequencies is reprehensible and CANNOT be tolerated by any licenesed amateur radio operator, intentional misuse of amateur frequencies for non-hobby (i.e. political purposes) should not be tolerated either. I seriously doubt that Riley Hollingsworth endorses the political objectives of the so-called Liberty Net. You are clearly trying to imply by this post that he is on your side.

I have seen your web site and its links. I am at least one person who is aware of your true political orientation---me. I hope that there are others as well. So don't think that you are fooling everyone with your coy email sign off "with all good wishes".

If it boils down to option 2, you may want to keep him on your prayer list for a long time. The typical R/S clerk lately might think a "choke" is what Hulk Hogan did to the bad guy on "Monday Nitro" this past week.

Dear Eric:

I have no idea what Riley Hollingsworth's political views are; I made no implication whatever about them; and they should not be a factor in the efforts to remove jammers from the amateur bands.

You are under a misapprehension which can affect people of any political persuasion: the idea that your opponents are "evil" monsters, lying in wait for the moment that they can begin a mass slaughter.

I assure you that such a description is ludicrously inaccurate when applied to me, a vegetarian primarily for moral reasons, a man who goes out of his way to avoid harm even to ants and who instructs his children not to step on insects or "liberals," a man who has worked with those of other races for decades and learned much from them, and a believer in self-determination for all peoples as a rational alternative to the enforced centralization of power now being imposed upon us all.

As far as amateur radio is concerned, it's perfectly permissible for people with common interests to socialize on the air and discuss any subject whatever, and we've done so for the entire history of amateur radio. (The Lambda Net, though I find it repellent, has been on the air for the better part of a decade and I know of no one

attempting to drive them from the air. The Liberty Net has been in existence for about 30 years.)

This freedom of speech, as long as there is no obscenity, applies, whether you like it or not, even to those who are so incredibly "evil" that they actually want their race to survive.

With all good wishes,

Kevin, WB4AIO.

Last night (01/04), WA9KJI tried to pull his usual stunt of calling CQ while another QSO was on 3950 in order to take over the frequency. He even tried to claim that it was his frequency!

Well, it just happened that Riley Hollingsworth, K4ZDH, was monitoring 3950 and caught WA9KJI with his pants down! Riley broke in and spanked WA9KJI for being a bad boy. WA9KJI tried a feeble attempt at pleading innocent, but Riley wasn't buying it.

WA9KJI just sort of crawled away like the sniveling little snake that he is.

LOL LOL LOL LOL!!!! IT WAS FUNNY!!!! LOL LOL LOL !!!!

> 73, Jim KH2D

No, there is some 10 meter on CB.. not 80,40,20...etc...
been there done that.
Antennas, Towers, height...etc prevent "most" CB'ers from entering this
realm we call amateur radio. The ones that want more... will achieve more.
I believe if ("if" being the largest word in the dictionary) an individual
can learn 5 wpm
then that individual can increase to ??? The initial 5wpm is the hard part.

No One learns at 20wpm they learn at 5 wpm and speed comes from use.
So CB'ers will still learn CW or stay on 11 meter. Duh....

and for JIM KH2D... :
Man "A" lives above ground in a conventional house
pays 250.00 for uitilities in a conventional world
Man "B" lives in an underground house
and pays 25.00 for utilities
in a conventional world

Man "B" has every option, doodad, and goodie as man "A"
who's the rocket scientist here?
Earth Sheltered does mandate earth covered ie: coffin, carrot...etc.

or Should We all own Yaesu and Inverted Vee @ 40 ft......?

Possibly you have some good points...If the sterotype CB'er that I believe
everyone is discussing posseses the knowlege to do as you have done, he is
probably prepared to, or at least capable of getting his ticket, unlike
the ones who wish to push a KW on channel 6. They only "buy" and talk. Not
design and build. it is not the test or the equipment that distinguishes
hams from CB'ers
it is the character and personalities of the individuals at hand.

i have always thought that hams were of a like mind and attitude (untill I
read some of the posts listed in this NG). i could go into detail however
That is why I own Radio....I don't like to type quite that much.:-)

I'm curious, how does the amateur radio community help police locate these
folks? Are they (or you) using, Operating, monitering these freqs?
Foxhunting on police bands? how does that work? See Above... "the suspect
will be suspect"
exactally what does that mean?
get a life... talk to your friends on the bands and quit playing detective...
dont make yourself out to be something you're not. And assuming you have a
business of your own.... try minding it.

You apparently suffer from a lack of self-esteem.

If YOU are a courteous operator with wide, deep technical knowledge,
then YOU are a valuable radio amateur. One could match my description and
hold a General license or below, or even no amateur license at all if you
worked, say, in military or commercial communications.

But it seems that this isn't enough for you. You crave that piece of paper
which says "Advanced" or "Extra" on it, not because of what YOU are and
what YOU have accomplished, but rather because of the mark the LICENSE
PUTS ON YOU, because of the "specialness" it confers on you, because of
the "distinction" which you believe it will afford you.

If that's all you want, just have a fancy, official-looking embossed piece
of paper framed and put on the wall next to your $3000 general-coverage
receiver. Only a tiny handful of people will know the difference.....

I am not at all surprised. I would certainly expect that those who felt
they could pass the written would do so ASAP after the rules change was
announced.

> The VEC ask if anyone wanted to take the Code test there were no takers.

Again, not surprising. If any of the applicants had felt ready for the
13 wpm, they probably would have tried (after all, why wait if you don't
have to), but most of those who felt ready for the 13 wpm probably would
have tried it at some previous point.

> All were there to take the General, Advanced or Extra test. So upgrades are going to go
up
> from what I saw.

Yes, indeed; there will be lots of new HF hams over the coming months.
Most will come from the ranks of experienced and already-licensed hams,
so Elmering won't be a major problem. What I am curious to see is how
many folks over the coming months take and pass the General or Extra
WITH a 5 wpm test.

> I suspect there will be quite a few taking the five word per minute test
> next month after they have a little time to get ready for it. Most of the
> people at the test gave the advanced a try after they took the General so I
> suspect that most of them will be back if they did not pass after they have
> a little time to study.

Those that are working on the code may want to consider trying to hook
up with an experienced code op (I am quite willing to help in the
central CT area). FISTS runs a Code Buddy program that may help. I have
always suspected that many VHF Techs didn't find learning the code worth
it for the small slivers of band a Tech+ can use, but that the General
priveleges might be enough "incentive" (to use the I word) to do so.
Out of that, I sure hope to see a few CW ops develop; it is a fun mode
that lends itself nicely to simple equipment and homebrewing. Those in
apartments may find CW to be a bit more effective with marginal antennas
than SSB, if they want a "human" mode of communication. Some of the

digital modes can be even more effective, for keyboard-keyboard contacts. No matter what, the most important thing will be for those who obtain new priveleges, or become licensed for the first time, to use them on the air and learn about different modes and different fun things to do with ham radio.

And please pass along my "good luck" to all.

Does that mean that us amateur extras, who passed a 20 WPM
test without a doctors excuse note, can start signing our callsigns
"stroke 20" as a designate kinda like the "interim KT, temporary AE"
that was so prevalent on two meters back in the early and mid 1980's

You sir, are probably not capable of being proud of any of your other accomplishments (assuming there are any) and you are riding on your 20wpm as though they mean something in the big scheme of things.

How often did you ignore kids as they were growing up to acheive your 20 wpm? If you do not like the ARRL, their staffers, or their book sales, no one will come to your house in "uppermiddleclassworld" and twist your arm to purchase them. As a great scholar once told me "if 'ya don't like what 'cha hear, turn your radio OFF". That's why the switch is there!

Well depends on what you want to do on 6m, I've used a couple 5/8 wave 2m antennas that work fine, the swer is a little high but it worked, if your working the low end of the band the performance might not be as good as one tuned for 6m. For casual work thier fine.

An Opinion

You know, that after hearing about the restructuring of the Amateur Radio Service licenses, I was a little taken aback at the drastic changes that would be going into effect in April 2000.

Now that I have been able to think about it a little longer and mull over the potential consequences, I have come to a decision and I would like to share it with others in the ham community.

The real concern about the continuation of our complex hobby should not be about whether or not a single operating mode is one of the elements we consider in testing prospective new licensees, but should be about the lack of mentoring for new hams. Mentoring in correct operating procedures and helping develop skills and abilities that will further the service and lead us into the future. This mentoring may take the shape of how to operate on two meters, how to operate on HF voice, how to operate using CW, how to do RTTY and even PACKET. But it should never be about trying to force a specific mode of operation. Rather, show all the different ways to communicate with each other and allow the natural progression or attraction to specific modes take place. Mentor someone in the art of kit building, show how to use an oscilloscope, teach someone to use an antenna analyzer or show someone how to solder (an art unto itself, when done properly).

Code is not the all and everything some of us would like to believe and reducing testing speed will not cause the death of anything. Code was the beginning of ham radio and should be revered for that, but not idolized. I will continue to use it almost exclusively, because I gravitated to it, not because I had to learn it to get a license and it was HARD for me, more than you can imagine.

I hope I become a better mentor and Elmer for those who take the time to pass the exams and become licensed Amateur operators and join this wonderful village of hams. I hope I can convince some of them to join ARES/RACES, operate CW and Packet, and HF voice and RTTY and all those other things, but I hope I can do it without disparaging those who don't appreciate the particular modes I like best.

What the changes do to our Amateur Radio Service is up to us. So keep that in mind when you start becoming bitter and negative in your thinking. The changes won't kill CW, Ham Radio, or anything else, but our attitude and lack of enthusiasm can, if we aren't careful.

Thanks for reading and I wish us all luck as we move into the future.

i couldn't agree with you more, and think i just might sell out, they are
just giving the bands away, but one thing, at least they are keeping some
code, that will still keep some of the cbers out, but 75 meters allready
sounds like 11 meters anyway. i got my extra back in 1989, and passed all
the code requirements, and i am blind on top of all that.

Encouraging people to consider or try a different kind of ham radio activity
is certainly a good thing. And code should be encouraged no less than it
ever was. But as a requirement for entry, it serves no functional purpose
besides limiting the numbers. It doesn't encourage people to consider code
as an operating activity.

And despite the crowding on HF, limiting our numbers is not something we
should be attempting to do. One of the technological challeges the world
faces is how to deal with more use of the spectrum. Hams should be no
less challenged in this respect, especially because it is WE who have a
great potential to find solutions, be they operating practices, or new
technologies, or both.

One reason for foxhunting is to be able to help in situations like this. The Amateur Service is largely self-regulating, and we don't want to lose that.

There's no "detective" involved; it's something we know how to do, and we actually DO, though we usually end up tracking down interference from other sources and abuse IN the Amateur bands.

FWIW, when one of our own abuses the technical latitude we are given, and exposes us all to loss of those privileges, it's _definitely_ our business.

Regards,

Cortland

:
: I'm curious, how does the amateur radio community help police locate these
: folks? Are they (or you) using, Operating, monitering these freqs?

It is much the same tactics that the military uses. Monitoring frequencies
the using direction finding equipment to track down the suspect. When
the suspect is located, law enforcement is informed. They get a warrant
and wait until they are interferred with again to raid the suspects home
or business.

: Foxhunting on police bands? how does that work? See Above... "the suspect
: will be suspect" exactally what does that mean?

Foxhunting is DFing. Hams have made a game out of it. Then use
the skill to track down those who jam our frequencies.

The other comment looks like a typo by Sgt. Rock.

: get a life... talk to your friends on the bands and quit playing
detective...
: dont make yourself out to be something you're not. And assuming you have a
: business of your own.... try minding it.

Our frequencies are under attack. Plus hams have the skills, the knowledge
of
electronic and of the law, to help the police. Often hams are called on by
the
local law enforcement agencies to help with various emergencies. Many hams
also belong to their local emergency management organizations.

All citizens have responsibility to maintaining the peace. Hams, more than most, have a deep respect for the law given that our hobby is tied to it.

All the hams on 75m are coded. Since the entry level exam, the nocode tech,
hasn't changed a bit, why would any additional CBers want into ham radio?

> 73s de MARTIN N5PZJ

Me? Neither problem 'nor solution. I sit back and think citizens should be just that. I could understand Hunting down someone jamming the ham bands...not the police bands. IF I wished to be a police officer then... "SEMPER VIGILANTIS"
sounds like "busy body" to me. Nothing wrong with neighborhood watch, but doing the jobs of civil servants is usually only done to be noticed. I question
whether or not you play fireman on the side, or help the roadcrews hold their shovels upright. I never read that any of the ideas or by-laws ..etc.. suggested helping to catch "bad guys" only to help in Civil emergencies ie: floods, earthquakes, and disasters that may Interupt communications.No?

If talents run so high then why are there not more Elmers? Better teaching would be hams to become more proficient at their hobby.
It seems so many people are griping over the new rulings. as if they want no more people on the air, and in the same breath state that the hobby is dying.

Personally, I live 21 miles from the nearest store, and it's in a town of 4000 We don't have such problems as city dwellers, we've all learned to be responsible for our actions, and help our neighbors out. Rarely do Govt. agencies need to be in OUR business.

'Course cops here don't randomly harass people, or sit them on curbs...etc. They still say "Sir" "Ma'am" here.

i feel that way sometimes watching the posts here in usenet. not just
in the ham groups.

anyone can go down to wally world and buy a computer and get on the
internet, but i don't ask them if they have any computer knowlege of
worth before i 'converse' with them.

interesting analogy. most of the people out here in the net are
appliance operators but noone 'blackballs' them.

people will visit websites that were 'generated' by an expensive program
just as much as a website built with notepad. the content is what
counts.

weird.

Patrick Wilson wrote
>The changes won't kill CW...

CW is being killed by father time, not the licensing changes. Even with full code testing for decades, the age of the average CW operator continues to rise, with few young replacements. Mortality will eventually take it's toll. There may be a few less new CW operators down the line because of the licensing change, but I'm afraid the mode was already on it's way to token use (similar to AM) in 20 or 30 years...

Correct in part

However, the problem doesn't reside with enforcement. Even though more proactive enforcement, at this time, sounds good. And it may well be - as long as it doesn't get in the way of legitimate operations.

The fault falls squarely on those that refuse to obey the rules.

It's like trying to blame the sprinkler system for burning the house down. The renter shouldn't have tried to barbecue his chops using the kitchen table as a grill. He's the one that started the fire - not the sprinklers. (To stay with the ham analogy, if someone hadn't turned off the sprinkler system it may have been possible to save more property and lives before the house became an ash pit)

You want to blame someone? Blame those that abuse the privilege of operating in the amateur bands, as if it where a right.

The amateur community has often been solicited for hunting transmitters
and interfering sources from cable companies, police, fire, FCC, (yes,
the FCC), cab companies, various service providers and the Feds. Where
else can you get a bunch of trained mobile operators with fully equipped
cars that will drive around like crazy without being paid?

Amateurs provide lot's of different services. Were not a phone company either but a friend of mine ran a phone patch to the Cleveland clinic back in the late 70's not knowing exactly who the person was at the hospital only that the phone patch was from a JY3 station, months later he received a personal thank you letter from JY1 himself thanking him for his assistance during a telephone system failure in Jordan.

But I guess were not a phone company so he should have minded his own business?

Wow, if I knew my local police department were being jammed I'd get a doppler system going ASAP, my family and communities safety could be at risk. That's VERY MUCH MY BUSINESS.

> If talents run so high then why are there not more Elmers?

Being an Elmer and helping one learn code and study to become a ham has nothing to do with talent, furthermore; the clubs I've seen that have fox hunts and specialize in DFing do Elmer, every time someone else joins the hunt. A group who did DFing in TN used GPS systems tied to a 2m link and assisted in finding a lost hiker in the mountains. This was the job of the search and rescue squad, I guess they should have minded their own business according to you eh? A ham found the lost hiker.

So since your environment isn't anything close to that of Southern California
where this incident occurred what experience do you have that allows you to
profess to the group what we should and should do with respect to law enforcement?

> we've all learned to be responsible for our actions, and help our neighbors out.
> Rarely do Govt.
> agencies need to be in OUR business.

Great, it doesn't work that way unfortunately in S Cal. Perhaps. I bet if the
Crypts and Bloods decided to hold a meeting at your local coffee shop you might be
whistling a different tune.

> 'Course cops here don't randomly harass people, or sit them on curbs...etc.
> They still say "Sir" "Ma'am" here.

When would they have time?, to busy eatin rhubarb pie down and Billy Jo Jim Bob's
Family restaurant talking about whose cucumbers won at the last 4H meeting.
Sheeesh.

The Morse code requirement has done more to hurt ham radio then any of the "worse than CBers" that you hear on the bands. It's time we let go of World War 1 relics like Morse code, "Q" code and numbered messages. These are symbols of the ham communities backwardness and the "dog in the manger" attitude toward our frequency allocations.

Morse code was finished after World war 2. It's time to recognize the new technologies and move into the 21st century.

For those scanner folk that might not know about hams and their
propensity for hunting transmitter. Here in SoCal we have formal hidden
transmitter hunts mostly on 2 meters (146.565) every week end. These
range from "easy" hunts lasting an hour or two to the monthly "All-Days"
that last a couple of days and may have multiple transmitters as far
away as 800 miles. BTW, I don't know of any scanner folk participating
in thest hunts, but since the hunter never transmits, only receives, no
licence is required to enjoy this faction of the radio hobby.

For once I agree with pretty much everything Jeff had to say. Maybe most people don't care about, or even know about, our hobby. But I do, and we do. We all have our feelings about the restructuring. Me, I love the Morse Code, but hated the Morse Code licensing requirement. Others felt that a stiff Morse requirement was important (I did at one time, so I understand this feeling very well). Hopefully we can agree to differ, and agree to unite to advance a much higher goal: promote, preserve, and advance amateur radio, my lifelong hobby. RJB

WELFARE WHINERS Q& A - Vol. #1

"How easy are the current code tests?"
They have been passed by 4-year-olds, 84-year-olds, Boy Scouts, Girl Scouts, Cub Scouts, and Campfire Girls.

"What is 'No Code International'?"
A handful of laceybritches whiny CBers who want to take over ham radio, who have been humiliated, shown up and shut down by 4-year-olds, 84-year-olds, Boy Scouts, Girl Scouts, Cub Scouts, and Campfire Girls.

"What is 'ARRL'?"
The Asian Radio Retailer's Lobby, a magazine publishing house that thinks they own ham radio and who will whore off true ham radio as they see fit to preserve their incomes and their name badges.

"I don't know code."
Then, of course, you are NO HAM.

"But I don't want to learn code!"
Then you will remain NO HAM.

"But I can't pass the code test!"
Then you don't qualify for a ham license.

"But I shouldn't have to learn the code because I don't want to use it!"

Then you're just a CBer.

"But I have a "no-code technician license!"
Then you are a CBer on 2-meter CB.

"But I have a call sign!"
So do CBers.

"But 'ALL HAMS ARE EQUAL'!!"
You've been sitting out in the sun too long.

"But Morse code is old fashioned!"
Not as old fashioned as using your VOCAL CORDS.

"But the military...!"
Ham radio is not "the military."

"But the Internet... !"
Ham radio is not "the Internet."

"But it's the "digital age!"
Then learn the difference between "OFF" and "ON" and you can learn the

code.

"But there are 'good people being kept out by the code requirement'."
See phenomenon #3 and #4 of the Anti-coder profile at
http://www.freeyellow.com/members5/cw-forever

"But so-and-so has a ham license and he thinks that the code test should
be dropped."
See phenomenon #1 through #8 of the Anti-coder Profile at
http://www.freeyellow.com/members5/cw-forever

"But so-and-so has a ham license and he thinks that the code test speeds
should be reduced."
See phenomenon #1 through #8 of the Anti-coder Profile at
http://www.freeyellow.com/members5/cw-forever

"But so-and-so has a ham license and he is an "ex-CBer," and he thinks
that the code should be dropped!"
Then so-and-so is still just a CBer who merely wants "revised CB."
See phenomenon #1 through #8 of the Anti-coder Profile at
http://www.freeyellow.com/members5/cw-forever

"But I HAVE A RIGHT...!"
NO YOU DON'T.

Nonsense. There probably as much ham gear on 11 meters as
their is on the ham bands. That's what saved a whole lot of
vintage AM ham gear that is once again popular with some
hams.

The FAQ at

http://www.arrl.org/news/restructuring/faq.html

directly addresses your question. A partial quote is below. Hard to
read due to formatting, but the info is there.

Phil

---

3. I hold an Advanced class license. Can I take the current Amateur
Extra class written
examination (Element 4B) right now, then apply for
an upgrade to Extra after April 15,
2000?

Yes. The FCC has told the League that current
Advanced licensees holding a CSCE for Element 4B
on April 15, 2000, may apply for an Amateur Extra
class upgrade. See question 2, above. The
advantage here is that the current Advanced licensee
will face a slightly shorter 40-question
examination under the current licensing regime to get
a CSCE for the current Element 4B. The new
Extra class Element 4 will contain 50 questions (and
is expected to contain many of the present
Advanced class question pool technical questions). To
be valid on April 15, 2000, your CSCE will
have to be dated on or after April 17, 1999. A CSCE
is only good for 365 days.

Roger wise ass said.....

>TON Duhhhhhhhhhhhh (N8WGM) is a wannabe survivalist and detective.

Sorry---no I'm not-------on either account.
I do believe that people should be prepared. As far as being a detective.....I do have connections to the law enforcement community...I have a few relatives and friends that are in law enforcement.I can get any information I need. But I wouldn't waste my time with you.

>He
>tried to stalk me and harass me by telephone. Additionally, he tried to
>ILLEGALLY TAPE RECORD my phone conversations, without my permission,
>which is wiretapping.

Roger---you are dillusional. I did not try to stalk you. I was in the area for two reasons.
One to visit my uncle who is retired and living in Wheeling. By the way--he's a retired police officer and made the observation that you were jamming 20 meters. He rode down your street with a receiver and found that you were the one jamming.The second reason was to go to the casinos. You were just a sidebar on the way to where I was going. You were afraid to come out of your house and our conversation was less than 20 seconds. You asked me to kiss your ass and then you hid behind your curtains.
I was not going to record you without your permission---I allways record my cell phone for business reasons.I always tell the people on the other end they are being recorded. I was in your neighborhood for less than 3 minutes. If that is stalking--then please call the FBI and the sherrif and have me arrested right now. I'll gladly sit back and watch them then go after you for being such a moron.

>He's obsessed with me and would go to great
>lengths to take my picture for whatever reason.

Yeah great lengths--like just park outside your house for 1 minute to ask you to come out which you did not do. And I 've not returned. Why are you so afraid of having your photo taken? I guess you are deformed as I have stated in my previous posting.
And anyone can photograph you without any problem.... Your house is less than 15 feet from the road.
Typical lower middle class hillbilly type house.....no front yard....small side and back yard and a house of less than 750 square feet.

>I speculate he wants it
>to masturbate to.

Stop fantasizing
Roger---you must be thinking of masturbating all the time...That's alll you seem to be thinking of in all of your posts.
----Roger wiseman thinks that men maturbate while thinking about him......perverted isn't he?

>One can only guess why he wants to live in a "house"
>built underground,

Roger--obviously you are not of any intelligence in reguards to construction, architecture and using the earth as a flywheel to mitigate the need for external fuels to heat and cool a home or other buidling. I have superior fenestration and use it to heat the house in the winter. During the summer.....I do not need air conditioning.....my house stays around 68 to 73 degrees due to the design of the house. If you want to keep paying the electric and gas companies to stay warm and cool.....then you indeed are dumber than I think.

ROGER---in my final comment to you.....I will say this--you do have the guts to put your name on your posts. It takes a lot of guts to put your name on some of those postings you make. Anyone reading them would think my god what a moron. Your posts are hatefull and inane with a dash of acerbity added.. I find them to be a waste of time to respond to and will not repsond to them again. You will be on my filter to remove.
73's--and good luck to you with your campaign to make everybody hate you.

>A GFI in a hamshack would be a very good idea.

And get all kind of false triggering due to RFI...

While the GFI is a good idea when working inside a live device on the bench, however, the GFI it is not a substitution for an isolation transformer. Due to the RF sensitivity of the GFI, it might not be a good idea to take all the normal operating power through the GFI. With a separate grounding electrode for the antenna tower, you quickly end up in ground loop currents even without the presence of RF, which can trigger the GFI.

For safe operation, it is important that every chassis is securely connected to the protective ground and that all wires and connectors are selected based on the fuse rating (and preferably using even thicker wires) to insure that the fuse is blown quickly, if the live ever gets connected to the chassis.

John, the reason you fuse the negative lead is to prevent damage to
the radio should your car battery ground fail. If your radio is tied
straight to the negative post and the main car negative cable fails
you will (attempt) to start your car through your radio. When you hit
the starter several hundred amps are drawn through the 12 gauge wire
and the coax. It doesn't last very long!

If your going to put up a dipole, I suggest the G5RV, its exelent.
I have one on my Kenwood TS-450 and it requires very little tuning
up from 3-30mhz. I have a small yard with few trees and it works
out well with the fed ends being about 60 feet the whole thing stays
in my back yard. I've made many 10 meter contacts with it, and when
I was in CAP I use to check into my region hf nets on 4.4 and 4.5mhz
and 7.6mhz all the time. Great antenna for 40 bucks.

Sounds like your going to be upgrading automaticly without any tests.
I missed the chance by about 10 months :(oh well no big deal, I
intend to take and pass the general and extra elements soon. :)
Jimmy, aka nexus

Actually this FAQ now brings up an additional question. Both items #2
and #3 state that in order for a CSCE to be valid on April 15th, it must

be dated on or after April 17th! Government logic? Geesh...

Also, it looks like people who take advantage of this upgrade path are going to pay $13.30. Once to take the exam and a second time to file an application.

In rec.radio.amateur.misc Dick Carroll <dixie@townsqr.com> wrote:
: Many of us "old farts" think so too, and that's why we
: wrote comments to FCC in support of a 5wpm General class
: license. What we DON'T see is the lunatic change that
: essentially turns the entire ARS into one huge
: Novice/Freeband.

I understand the point you are making there. However since the
FCC is allowing us to have access to the Extra class, it is my
primary goal to achieve it after the 15th of April. Hope your not
too mad at me for wanting that :).

You may think this change is going to turn the entire ARS into
one huge novice/freeband but I disagree. The written element for
Extra is still just as tough as it was when you took it.
I'm going to have to learn the same ammount of theory as you did but
just because I can not overcome a 20wpm code test I'm now a novice
or freebander in your eyes? You consider me a second-class operator
not worthy of touching Extra portions. You think that the moment
we get our revised (watered down) extra class ticket we're gonna come
raid the bands and act like a bunch of morons from channel 6 or 19?

Uh have you been on 3950 lately? There is your FREEBANDERS. I'd
rather have a bunch of novices operating within guidelines and using
common sense and trying to all co-exsist together than have fullblown
Extras doing things like, cursing, threatening life and or property,
slandering others, making racial statements, talking bad about others,
diliberate interference towards other stations on the air. You ask
me and I would say that your version of the Extra hasn't worked out,
so I think its time for a change to let some fresh blood who does care
about the other operator, and is kind, and only wants to do good have
a crack at it.

Yes indeed, its all in the best interest of Ham Radio..sure it is! Look guys, it has nothing to do with the CW requirement. I am 110% in favor of the CW requirement, but the truth is Ham Radio began its demise when the FCC stopped conducting exams. We all know that the VE system is of questionable integrity. You can read about bogus testing sessions every month in QST and other Ham rags. And those are only the ones that got caught! Just think, now any half brain dead idiot can go into a VE session, conducted by his buddies, take a 35 question exam, which he already knows the answers to, and come out an Extra! And this is GOOD for Ham Radio! Somebody explain that to me. Or should I say "rationalize" that to me. I may not be the nicest or smartest Ham in the world, but I'm sure not stupid either. This is definetly The End of Ham Radio. Do you really want to be associated with persons holding Extra tickets who do not know the difference between a 9 volt battery and an oak tree?
I don't.
I guess I must be confused, but I always thought if I EARNED something, it would have value to me and I would respect and take care of it. How much value can you place in an amateur radio license that is easier to get than a parking ticket?
Good bye Ham Radio, it was nice knowing you.

As far as my comment about the internet being too easy, I was refering to it in the context of a communications medium, It does not take a java whiz, or other programming skills to load some copy of voice chat software into a mickey-soft computer and be able to "reach out and touch someone".

Like ham radio, the computer hobby has people that are users, and there are the "geeks" that know the intricate details of TCP/IP, ATM, and various other networking schemes.

But as far as from a purely communications standpoint, communicating world-wide on the internet is as easy as pointing and clicking. There is virtually NO challenge to it. Ham radio, on the other hand, has many variables that make the pursuit of DX, challenging. And THAT is where the enjoyment comes for the majority of radio ops. If you can't grasp that concept, then you're probably better off on the internet.

> Supreme Court review and rulings.

Zoning laws are superceded by federal law in most cases. Zoning restructions can be challenged and overturned if one has the desire (and money). CC&R's are considered "voluntary" contracts. Still, with the availability of "ham friendly" neighborhood, slowly declining, while the population of hams will be increasing, there may be some legal challenges to CC&R's as well. Stay tuned.

> propagated world wide on the HF bands at the eleven year sunspot maxima
> make citizens and governing bodies of the US appear as chumps and cause
> a loss of face in the global community.

The US is already viewed as "chumps" by a great percentage of foreign counties. As to your assumption that "CBers" will be on HF, that has not be substantiated, and is only a paranoid supposition.

> 3. With the expected increase of operators will the FCC impose a reduce
> power limit so as to maintain appropriate RF field intensities in areas
> of human habitation---for the children.

We already have power, and RF field guidelines which every ham should be aware of. It is up to each individual ham to construct his antenna system to concentrate the major RF power away from habitable space. Hams should, as a rule, use the minimum power necessary in any case.

> 4. Statistically speaking, will the increase of illegal activites that
> will accompany the increased population of amateurs be managable by the
> FCC---if they can't afford (funding, manpower) to manages the mess that
> they created what then.

They can't seem to "manage" what we have now. More hams will only make the job tougher. Ham radio is only a mirror of society itself. When we live in a society that encourages parents to not correct their children, lest it damage their "self esteem", it's no wonder we have so many

people that are quick to ignore rules and regulations.

> 5. What restrictions in advanced design of amateur equipment will be
> imposed now that manufacturers have been stimulated to produce by the
> creation of larger market demand.

That's a strange question. Actually, I would be curious as to what new technologies and innovations can we expect to see now that the market is potentially growing. What new bandwidth saving techniques will be employed? What about digital audio?

I see nothing that would demand a "restriction" on designs. If anything, I see the opposite.

> 6. Will amateur radio disappear into the 'noise' by a future FCC Report

> channelized control of spread-spectrum modulation techniques to hide and
> get rid of the dirty little mess. Pass codes will be issued instead of
> callsigns to activate strictly regulated (FCC) communicators
> (ex-tranceivers).

That's a sort of Orwellian viewpoint. I think that ham radio should already be experimenting with SS techniques. There are alot of advantages to it. But forcing Hams "under a SS carpet" to hide the dirt, seem a bit farfetched. At least for now.

> 7. Will all amateur HF allocations be eliminated and relocated to
> spectrum translators aboard amateur satellites operating at milimeter
> wavelengts.

For what reason? That would also incure additional cost. People want cheap. HF is cheap.

>
> 8. Will amateur equipment contain embedded identifiers and GPS locators
> to control errant amateurs---computer databasing and issuance by

> approval) at the mere push of a button by decoding an encrypted data
> burst piggy-backed with amateur transmissions.

Any analog scheme of auto identification can be thwarted by technically competant people. Once you are in a digital domain, it would get tougher. But I would hate to think that a digital encrypted ID scheme would have to be developed to deal with out-of-control hams. At that point I'd be out of the hobby.

>
> 9. Will we tire of 'smokey' reports from one end of the continent to
> another.

Only if you keep your rig on 27.185 Mhz.

> 10. To ease congestion, will amateur VFO's (slyda's or sliders) be
> eventually outlawed and be replaced by channel selectors.

They already are on most VHF radios. They may call them "VFO's", but they are just 5 Khz resolution PLL synthesizers. As to easing congestion. An HF SSB signal only needs about 2 Khz of bandwidth. Any channel selector that has less resolution than 2 Khz, would increase congestion, since it would force all of these signals into "clumped" channels, instead of allowing them to spread out.

> 11. Will older amateur equipment at some future date be outlawed as the
> transition to controlled radio communications is established.

That's a sure bet, assuming that your Orwellian scenario plays out.

> 12. After April, 2000 will we find that an obtaining and possessing an

> be licensed in the US.

What country (especially a 3rd world one) has testing standards that are MORE difficult? We, the US, are actually LAGGING many other countries in reducing testing requirements, especially regarding morse code. It's funny that even 3rd world countries recognize that morse is an outdated skill, that is no longer relevant.

The VE system is fine, despite spotty lapses. Nothing is purpose.

The new restructuring shows every promise of rejuvenating ham radio by replentishing our ranks with a new generation of computer-literate hams, who will rapidly be assimilated and socialized into our ranks. Let the FCC try to sell our freqs, and let homeowner CC&Rs try to ban ham radio when there are 3 million active HF hams. Won't happen.

Morse Code is a fine tradition, and I and many others will continue to enjoy it.

There was nothing magical about going down to the federal building to take a ham test. It was a pain in the ass that we are all better off without. I did it twice; had to take time off from school both times. Nuts.

(Reply restricted to "misc" and "policy" ... why the original message was posted to all the radio newsgroups defies understanding.)

Not a very big deal. Note that it is April 17, 1999. The April 17 vs.
April 16 (1999) may relate to this being a leap year -- and April 15,
1999 to April 15, 2000 would be 366 days. Seems OK to me.

> Also, it looks like people who take advantage of this upgrade path are

True. But the added $6.50 can be saved by waiting until after April 15,
2000 and taking the single new element with more questions. So there is
a choice.

Phil

1137. Tcl/Tk Amateur APRS program for Linux/Windows/Mac/etc

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-07 00:00:00 UTC
From: Jeff Pierce <piercej@preferred.com>
Message-ID: <3876115E.F44AFF1A@preferred.com>
Source record: 122612
Cross-posted to: comp.lang.tcl,rec.radio.amateur.misc,rec.radio.amateur.digital.misc

I have developed a Tcl/Tk application for the Amateur Radio APRS system.
It was intentionaly written to run under Linux/Windows and other OS's
running Tcl/Tk with no code changes other then specifing the serial port
of the TNC. I only have the resources to test under Linux and Windows.
The main feature is that it uses the US Census Bureau's on-line Tiger
mapping service. This great service allows users to get US maps from
them using just the http protocol, and not have to use a web browser.
It is not a full blown app at this time in the state of
winAPRS/javaAPRS. It was written over Christmas/New Years holidays just
to fill in cold nights.
What it does do is to provide a source code base for future expansion
and customization.
Features:
Uses Tiger on-line mapping service.
Map can be zoomed in and out with mouse.
Map can be re-centered using the mouse.
Latitude and Longitude of a point can be read using the mouse.
Decodes a subset of the APRS format and displays the station and
callsign on the map.

And, since it is Tcl/Tk scripting language, ya get the source. I'm
releasing it under the GPL license.

Excellent point.

Allow me to add that passing an exam only proves you have some idea of
the rights and responsibilities of those privileges. However, knowing
something and applying what you know are two different things.

The world is filled with blithering idiots who can pass almost any
written exam you put in front of them, yet when asked to apply what
they "know" they are totally stumped.

I think we are in agreement. In general, the Internet is easier. But not by much. How much harder is it to get a Tech license, buy a HT and talk to someone over a 2 meter repeater? IMO, not much harder than buying a computer, getting and setting up an ISP account, learning to use the email client and sending an email.

Don't fool yourself into thinking amateur radio is that much harder than the Internet for basic comms.

1142. 6 Meter Mobile Antenna Question

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-07 00:00:00 UTC
From: srmbj@aol.com
Message-ID: <20000107115348.00763.00000442@ng-ck1.aol.com>
Source record: 122617

Any suggestions for a 6 meter mobile antenna? I was told that a 48" 2 meter 5/8 wave antenna is equal to a 6 meter 1/4 wave antenna. Is this a way to go or should I look for a dedicated 6 meter antenna?

Thanks,
Joe

IF you work for a company or corporation with two or more people,
rank exists.

If you like the idea of living in a classless society (same rank,
same wage, same bicycle, same clothes, same level of education) I
can list a few countries which still practice that sort of thinking
-- we can all chip in to send you to one of them.

In 1990, there were 100 homicides in City X. Supposed that number decreased by one each year. Hence, there would have been 91 homicides in 1999. Sure, that's a 9% decrease in homicides, but 91 folks are still dead. I don't believe that decrease in the "crime rate" has made them feel any less dead.

When you speak of certain VHF activities, you should append "in
my area" -- you should not give the impression that that activity
occurred "widely," for you have no way to monitor nationwide activity
on VHF.

In Southern California in the 60s, there were no 10-codes being
used on 2m. Lest we forget, the nation's first VHF repeater was
located in SoCal: K6MYK, Mount Lee, Hollywood Hills, owned by
Art Gentry.

I know some folks who use the base loaded Larsen 2 meter antenna on 6 meters and they say it is a good match. I have a Standard C5900 in my car and use one of the Antenna Specialist "disguise" whips that I cut down to 6 meters. These antennas were commonly used by police vehicles and looked like a standard AM/FM antenna (it really wasn't hard to tell they were actually a 2-way antenna). I have a splitter made by Antenna Specialist under my dash so the 6 meter antenna covers AM/FM and 6 meters. I have another splitter which routes my 144/440 signals up to a cellular look-alike antenna on the roof. I have been pretty pleased with the results. My antennas are pretty low profile. An untrained eye would probably think I just have a cell phone in the car.

In my personal -- constitutionally protected -- opinion, any amateur
radio licensee who perceives they hold a higher 'rank' than another
licensee is a presumptive twit.

It is my further personal opinion that any such presumptive twit
who suggests I'd prefer living in a "classless (communist?) society"
lacks the level of native intelligence and good manners we might normally
ascribe to a rabid possum.

Hi LLoyd,
I found out that an Outbacker antenna works real well on 40meters and the
other bands as well.
the antenna is designed for the ICOM706II the purth+ is the one. I love
mine, i started out with a Ham Stick but it brought in to much noise for my
tast, The Outbacker Purth+ is on the pricey side
but works great on all bands that it is designed for!!!!!!!!!!!!! KB6HRT

When 10 codes appear in 73 magazine, a national magazine, it was likely more than just a local thing.

>In Southern California in the 60s, there were no 10-codes being
>used on 2m.

You have the same problem that you accuse me of. Since you didn't monitor *all* the repeaters, and *all* the simplex FM, *all* of the time, how could you know for sure??

But this happened before the repeater fad took place. It was when all those surplus taxi and police VHF FM trunk mounted (tube) radios first became available. Before that 2 meters was mostly AM with rigs like the Gooney Box...

David:

Yes, what you say is quite true. During my regular stays in Argentina
over the years I would often listen to the SW bands. It was quite
stunning to tune through the CB channels and hear regularly spaced peaks
of noise and essentially noiseless spacings resulting from untold
thousands of CB'ers piled together and transmitting simultaneously.
Occassionally, "How 'bout it skip land, Texas trying." or some such
emanation could be heard making it's way out of the mess. Similarly,
the FM studio-transmitter link transmissions from WFLA on 25870 kHz were
heard daily from morning till night with exceedingly strong signals.
Surprizingly, the amateur 10 meter band at the same time was completely
devoid of activity besides the strong beepings of low power amateur CW
propagation beacons from the US---I guess amateur radio mythology
promotes the belief that the sunspot minimiums preclude communications
on 10 meters.

Get a grip, pal!

I fail to understand why older amateur radio operators feel so strongly about clinging to the ancient belief in CW as an important pre-requisite to entry into the "HF club". This kind of nonsense is why decent operators [such as myself] haven't used the HF bands.

I hope Canada rapidly follows suit with the US in its licensing regulations. Sorry, CW is NOT the only mode used in HF, and certainly is losing ground by leaps and bounds with digital modes as most of us tread bravely into a new century - I can foresee a day not too far off when perhaps a CW operator clinging to his/her key like a mad dog to a bone will be scorned, if not at least the subject of intense ridicule.

If we as amateurs are to preserve our spectrum allocations, we need fresh operators and ideas - we are already being threatened by countless commercial services for slices of bandwidth, and I doubt that the trend will cease unless more use of all our bands is made noticable. The only way to do this is to get with the times.

I do agree with the 5WPM minimal requirement for licensing, however, since it is imperitive for us to not only preserve our heritage, but to prevent rampant takeovers of our spectra with CB/11m operators not really serious about ham radio. Amateur radio is a priveledge, not a right.

For those who continue the misguided notion that CW is so much important than other operating modes, then a test in computer programming and circuit board design should also be implemented to you ol' farts in order for you to enjoy HF operating privledges! I understand that regulations have rendered your "exclusive club" somewhat obsolete, but CW proficiency does NOT indicate the operating skills of a radio amateur.

thanks!

Darren, VE6IZ,

Edmonton.

There are many on here of sufficient intelligence to see our points and agree and disagree, but there are many more, typically of the contester ilk, who are as dumb as rocks and are Twinkie creme-filled nerds of sufficient magnitude to match.

KH2D crawls out from under his rock every now and then when the high bands are so-so and he can take a day off from playing the role of "I am DX therefore I am Jesus Christ, Superstar".

Get a haircut instead of a new rig this year, if your picture is accurate. Furthermore, you look like you're made of Play Dough. Lose a few pounds.

People like this guy, W1JCC and yuppy nerd W3UR obsess over DX nets and how working DX on a frequency full of interference makes you a "real man". To who ? The other ham-geeks in the Kingdom of Sha Na Na Na ?

I don't care for nets myself, but take a pill. Preferably one that will fix the brain fag you've all built up by staying awake 48 hours to work every other obsessive loser you can find.

These are the same weasels who were for dropping the code speed ? In favor of dropping the very standards by which you get on those DX net frequencies ?

But the DX net itself is a bad operating practice ?

To those of us with brains, jobs that don't involve fleeing the U.S. mainland or peddling ham radio writings (or both like some VP2's), you missed the day they were handing out logic chip replacements at Dayton.

These are the guys who wanted to lower the code speed ? Sure, because they'll go hide behind their CW paddles at 35 wpm far away from the rest of us who will have these new geriatric hams answering us at 5 wpm. Out of decency some of us will even reply much to our chagrin. The pro-welfare crowd will just go have another American beer in a can, stuff their gut full of salt coated pretzels, light up a Morley, set the alarms in their Gremlins and ignore them along with us 20 wpm "slow pokes" like they do already.

From my point of view, it's a great decision. Morse telegraphy is
STONEAGE and it is time to suppress all CW exams around the planet
for hams.
Yet the administrations of UK and NORWAY have reduced too the exam to
5 WPM, announcing the future suppress of CW in ham exams...
This mode is OBSOLET, it was probably good for the TITANIC but will
be not for the 21th century.
Anyway, I have nothing against CW, if some people like this mode, may
be we could allocate them SHF bands ONLY to continue to play with, while
we could chat on HF. :-)

That will be the technicians' revenge !!

Maybe they'll wait until April. Why take 90 questions worth of exam and
wait until April to get the privileges when you can wait until April
and take a 50-question exam that gets you the same thing? Either way,
you have to wait to April to apply for the upgrade.

I was under the impression that, when renewed after April 15, my license
will have "Tech" printed on it, since they combine novice, tech and tech +
into one tech class. Anyway, we shall see what happens.

Richard, you are obviously extremely confused about the facts in these cases
that you have referenced. I was listening yesterday when Tom, WB3HGW, was
making the claim that he had been in contact with you and that you were going
to be back on the air soon. It really doesn't matter if you are allowed to
return to amateur radio or not, because the entire ham community is cognizant
of your agenda and activity on ham radio. Tom also stated that you were
treated unlawfully by Mr. Hollingsworth and that you will be setting the
record straight. Why don't you get one of those so-called family attorneys

and challenge the system ??? Get off of your porcine ass and make a statement in the courtroom and see where you stand. You can ask for a hearing before the ALJ and your case will be settled. Tom McMillan stated yesterday that Mr. Hollingsworth had been sent to Gettysburg as a punishment for something, this is utter nonsense and Tom should realize that you have caused problems for many people who are tainted by your lies and never ending BULLSHIT. You also stated that all of the above mentioned individuals had been dealt a raw deal and that Riley had to correct his so called errors. Utter nonsense, you should research the facts before you make such unfounded statements. NX9J, KE4TEW. WA9KJI, were caught doing exactly what they were warned not to do. I was listening when KJI inserted his foot in his mouth and continued his nightly platform of jamming the amateur bands. As for KE4TEW, just recently he was running mobile and his signal had a definite problem with a heater fan or some other electrical feedback to the audio, which made his signal very unique. As the idiot traveled north and used the callsign of W4LLI it was extremely noticeable and was a dead giveaway . Get the facts, report the truth, be accountable. GET A JOB AND QUIT LIVING OFF YOUR WIFE !!!! Remember, I still have more information that I have never divulged, but I will !!!!!!!

I hope to get some CSCE's for extra theory done so I can combine that with
my pre 1987 tech plus come April 15th. Been studying for the theory tests,
I have to find out how to calculate Q give the L, C, and R of a resonant
circuit. Perfer to learn it vs just memorizing test pool question and answers.

In article <38748984.529F413C@sgi.net>, <Pappy@sgi.net> wrote:

: A suspect was caught in the act making illegal tranmissions over
: police radio frequencies. The arrest was made by the FCC in the city
: of Bell. At the time of the arrest the suspect was illegaly
: transmitting over police frequencies. The suspect will be charged for
: making over 200 such transmissions in LA & Orange Counties. The
: suspect will be suspect will be subject to a $1000 fine for each
: violation. Looks like the cop bashers trying to blame the police for
: these acts will have to eat a big slice of humble pie.
:
: Sgt. Rock

The amateur radio community helps police locate these folks. It is
highly illegal, and with the current FCC attitude towards enforcement,
you should see more folks facing federal charges.

That's what Kim wanted it to mean. She said so here. Those people who use the word on their t-shirts (in public) also leave little doubt what they mean.

>why don't we...change the name of...The Grand Teton

In a polite society there are verbal standards. "Tit" is recognized as vulgar slang. It is not unusual in the locker room, but is (was) usually off limits in a mixed family setting such as ham radio. Breast and Teton are legitimate words when used in the correct setting. It's not the body part that's vulgar, it's how, and in what context, the word for it is used...

>Lets be Gentlemen and not insulting adolescents.

Gentlemen would not use the word in public. Adolescents probably would. Even many elementary school children know the word, but they certainly would not get away with using it in a classroom. Why is ham radio any different...

This is a rhetorical exercise: Since something is worth what you are willing to pay for it - say if every ham were willing to pay $500 to use the bands, you could quickly come up with a dollar amount that would correspond to how much the community valued the bands.

That would set a market price, per se. I was just curious how much the community valued the bands. I figure some of the "prime" bands might be worth more than some of the other ones, and so on.

Since the FCC is going to be allocating more and more to private business, it might be good to figure out which bands were "worth" the most to us and then target the less "valued" ones for reallocation if it was a question of lose band A or B. Or if all bands used were more valuable to the HAMs than any other sort of company - then there would be built in protection AND that the overall utility and economic efficiency would be lowered by such a reallocation!

Of course for this to go to fruition, somehow the actual $$$ and values of discoveries would have to be held in escrow or something to keep people from inflating the value to them -- like a typical HAM might be willing to pay $500 to use 10m, but only $5 to use 220MHz. (The equipment people buy would also count towards this as they are in essence "paying" for the bands by buying equipment). Also the value of contributions to other companies and people would have to be valued also in the pro-HAM arena so we aren't placed at any real disadvantage, I think. It would also give everyone a real concrete understanding of Amateur radio's contributions and also the seriousness we take the "hobby" (avocation is more like it! ;))

Under a system like this, also, there would be real incentive to get people involved on all the bands, since involvement would increase the value and hence, protection of the bands. You wouldn't find people trying to keep

people out of amateur radio since there would be a huge disincentive to do so in the form of fewer hams, fewer virtual $$$ towards band allocation and the eventual reallocation of the bands to others that would value it more. Entry tests would be more tests that would allow the person to use the bands and understand electronics.
Just a modest proposal... :)

Good Work, Joe.
I am guilty for not standing up sooner. As a Southerner and a descendant of the House of Lee of Virginia as well as other ancestors who were CSA and USA. It high time that this trash finds another hole to slither into. ITS HERITAGE NOT HATE, remember the Civil War (War Between the States), both black and white soldiers died in that war and every war since to guarantee freedom, their blood is sacred.

Amateur Radio is spread goodwill, not racial BS. Good night Mr. Strom, your Fuerher died in a bunker in 1945. Hitler the Dumbass had some bad ideas, don't carry them into Amateur Radio, its for goodwill, not hate.

BTW, my ancestery also contains a Jewish Ancestor who carries her bloodline back before the middle ages, be careful, Jews are everywhere.

<GIGGLE> Aaron: You know what? Just as the rules now will allow me to upgrade to General or Extra with the existing code speed I have accomplished, they also allowed me this callsign. Ham radio is still a family hobby. I do NOT have "tit" for a callsign, I have W5TIT as a callsign, legally issued by the FCC to me. Get over it, you pompous baffoon.

Excuse me? Kim wanted IT (what?) to mean what? What did I say here?
Why, you must have seen me at Hamcom last year, Aaron. And, not only
that, but got up close enough to see what my *callsign* (NOT the word
"TIT") tee-shirt said. You should have introduced yourself! I would
have loved to meet you!

W5TIT is a legally issued callsign. Take it up with the FCC. I'm
uninterested and unaffected by your apparent disapproval of my
callsign. Oh, and I also wouldn't be so quick to classify you as a
"gentleman." But, my definition of a gentleman and yours are probably
two very different things.

Buhbye now....

>
> BTW, Kim, is N5TIT taken?

Martin, at the time I applied for my callsign, I wanted K5TIT (which is already issued to a guy in Florida; so, uh, Aaron--what do you have to say about that? Shouldn't he give that call up?). Anyway, N5TIT was a possibility. The only problem with that is at the time there was a little riff going on at a local level and I didn't really want to be seen as agitating those whose N5 calls would have been right there with mine, as that was not the reason I got this call.

So, why did I get the call? Well, all "the guys" were getting their vanity calls and, at first, I was kinda not supporting the vanity call program. So, one morning on the local repeater I keyed up and I said something like, "Jeeze...if I got a vanity call, it would be a TRUE vanity call." They all knew what I was talking about and we ribbed around about it for a couple of weeks and then it kind of dropped. A couple of months later, I figured I would "join the crowd" and shock them with that call on the air.

In just about a year, heck maybe over a year now...Aaron and one other person are the only negative comments I have gotten on this call. It has disrupted contests with outbursts of laughter, it has put the shine back in our elder hams' near lifeless eyes, it has gently turned the corners of many a prudish gentlemen. And, I have enjoyed it.

Q = (2pi f L)/r is correct for a *series* circuit.

For a *parallel* circuit use Q = r/(2pi f L)

I hope you are all correct.

I love CW, it's all I use, and I will be sorry to see it go as a requirement (if it ever does). If CW doesn't make a difference, will someone tell me what it is that keeps the bands from sounding like 11 meters? I have seen them (bands) through about 24 years of change, but for as bad as they seem today, they are nothing compared to 11. Why?

Sure there are people who Bash book and garbage in garbage out throught the classes, but even most of them retain something. In fact it still takes more effort to cram for an exam than it does to go down to Radio Shack and buy a citizens band radio.

It might be said that the caliber of person who can at least crack a book and memorize or take some time to learn the code might be just a littler higher than those who can't even read. Education of any sort will always produce a better idividual.

So I hope you are all correct. I hope the code doesn't make a difference, because once the precidence is set to do away with it, any type of theory is next. Then what will the difference between the amateur and citizen's radio services be?

For her it's expression, and for me it's being "uptight"?? Double standard...

>I will voice my opinion but look at this as amusement.

It is *adult* amusement. But ham radio is (was) for the whole family, not just the adults. It's just another symptom of the increasing garbage on the bands...

While scalding, that was very well said Nick. I indend to get my license someday. This is a very VERY new interest of mine, and I go into this interest late in life at the ripe old age of 26. I'm going to be taking some electronics classes at a community college in the meantime. Your remarks while scalding, are well said...

In the Phoenix area, hams have aided the County Sheriff's office and
several municipal PDs in DFing unauthorized jammers and harrassers using
police frequencies. The aid has come at the specific and initial request
of the agencies, who were frustrated by the FCC, which put off
investigating the problem for many months.

Good locks (Fichet double-tumblers with brass punch plates and 180-deg dual 1" slag bolts into 1/4" angle-irons top and bottom [plus an Abloy knobset with integral DB], steel frames w/1" jamb lips, and nice solid triple-hinged old hardwood doors [2 1/4"]) and good dogs *do* work quite well. Lexan window panes [also with 180-degree deadbolts] in frames designed for Andrew-level winds (as is the Lexan: it won't shatter when the wind throws a brick against it) are great as well. That's all that stands between a burglar and $5K worth of antique electronics. A gun would add little protection, especially when no one is home. That is what a real neighborhood, with real neighbors, is about. Mine know me, I them. Any weirdness or weirdos show up and we know it [so do the weirdos], call each other first, then the authorities. Amazing what a little genuine community can do to keep bad people from even coming around in the first place.

Seems to me all this racket about self-defense is just a ruse for hoping/waiting for the opportunity to shoot someone. Years of gun-adoration, all that practice at the range, and reading all those hysterical testimonials in gun magazines makes people trigger happy.

Oh, another nice thing about prefering tube-type gear to the current crop: while someone may burgle your home and walk away with your new FT-847 tucked under their coat, what are they going to do with that KWS-1 or 75-A4? Even if they knew what it was and its value, how are they going to abscond?

The fcc has killed the code. It just dosent know its dead yet. The fcc needs to finish the job by doing away with the 5wpm and allowing fone operations in all bands now reserved for cw. Its not logical to reserve 50% of the ham bands for a dead mode no will be using in 10 years (or less) except for a few old geezer cw types.

Under normal circumstances, yes, but you also have resposibility to the
"community"
such as the minutemen of 1776 had to defend and protect his community.

I could understand Hunting down someone jamming the ham
> bands...not the police bands.
Perf., the police usually ask for help in these cases since
radio and communications are outside their normal areas of
expertise and knowledge. Hams have experience in this area
to a higher degree and so the police usually turn to the
Hams, its not like they are turning over the police dept to us
only asking us to solve a problem to help do their duty in much
the same way the police might ask a doctor to interpert data at
a murder scene to catch a killer.

IF I wished to be a police officer then...
> "SEMPER VIGILANTIS"
> sounds like "busy body" to me. Nothing wrong with neighborhood watch,

The exact meaing behind Semper Vigilantis is ALWAYS VIGILANT which is
the idea behind
neighborhood watch, most criminal types hate "busy body" SO:>

> but doing the jobs of civil servants is usually only done to be noticed.
Long hours at the Courthouse during a hurricane is no fun!!!

I

> We don't have such problems as city dwellers, we've all learned to be
> responsible for our actions, and help our neighbors out. Rarely do Govt.
> agencies need to be in OUR business.

Contridictions in terms my man, abound in the last paragraph. You say
you want Public Servants to solve all their own problems but you help
out your neighbors, who do think
is your POLICEMAN? Your neighbor (meaning somebody in your community) is
the
guy or gal who patrols the lonely highway, watches over property when
you are gone and
keeps his eye out for suspicious activity and assists at medical
emergencies.

>
> 'Course cops here don't randomly harass people, or sit them on curbs...etc.
> They still say "Sir" "Ma'am" here.
RESPECT MUST BE EARNED NOT TAKEN. If your local officer asked for help
(assuming you
are a licensed ham?) would you help? Or tell Mr. or Ms. Public Servant
to solve
his own problem? From what you have written, I would hate to see a real
emergency crop up in your area, of course, you could get out your
lawnchair
as you watch your "Public Servants" put the sand in the sandbags to stop
the
rising waters.

Perfidious, you are lucky to have lived in a place where there is no
crime, no
emergencies or fires. Your local Govt seems like they can do everything
and when
the day comes they can't, you will be the first person complaining. In
our wonderful
Constitution, WE THE PEOPLE is not merely a saying but a statement.

If you were off by some power of 10, you may just have gotten the
dimensions wrong. In the equation, freq is in hertz and L is in
Henries.
if L is in millihenrys you can just make f in kilo-hertz to offset it,
similarly microhenrys and megahertz go together.

I have mixed feelings about the new restructuring. I am in the middle of studying for my 20 WPM exam, and plan to take it so I can at least say I did it the right way. My interpretation of the situation is that if you are currently an Advanced class license holder who has passed the Element 4B written exam for Extra (like me), that will qualify you for the new extra class. They should not upgrade you automatically given your situation - I could be wrong... but that's how I read it.

Note the use of "went," Aaron. And recall what I wrote about 2 or 3
months ago, that the entire collection was donated to the Lockheed
ARC (to which someone asked why I have a KH6 call when Lockheed is
located in 7-land, to which I replied that Lockheed used to be located
in Burbank, CA, and the donation was made when I was WA6QIJ, etc.)
Deja will confirm that exchange.

>>There originally was only one repeater, and one simplex channel.

>Every ham in California was on one repeater and one simplex channel? Boy
>what a waste of bandspace (and a hard story to swallow)...

And at one time, there were NO repeaters in SoCal (and none elsewhere.)
Hard to swallow? If so, see the enclosed below.

Your setting in this thread is the late 50s and early 60s, remember?
Lest you forget, the very first repeater in the nation was located in
L.A., Art Gentry's K6MYK machine, atop Mount Lee, in the Hollywood Hills.
Art pioneered technology of having a receiver operate simultaneously
in the same band as a transmitter. Let me pull up his SK notice for
you (see below).

Jeff

ARTHUR M. GENTRY, W6MEP, SK
The ham that gave each and every one of us the
ability to communicate over repeaters has died at
age 89. Arthur M. Gentry, W6MEP, passed away
about three weeks ago in Beaver, Oregon of natural
causes. Only a month earlier he and his wife
Millie, K6JJN, had moved to Oregon to be with
their grandchildren.
It was back in the late 1940's that Art Gentry
began experimenting with receiver designs that
would permit hearing signals on the same band that
a nearby high power transmitter was operating. By
the late 1950's he had developed the needed
hardware to put the first practical voice repeater
into operation from atop Mt. Lee overlooking Los

Angeles, California. Gentry's designs were adopted by both the Amateur and Commercial Land Mobile services and lead to a revolution in voice relay communications that prospers to this day.
In addition to his developing repeater technology, W6MEP also helped to pioneer the technical side of covering breaking news stories. One of his most significant contributions was in the design of the KTLA Telecopter for Golden West Broadcasters. This was the first remote broadcast facility ever installed on board a helicopter and is the fore-runner to the news choppers of today.
Bill Arens, N6NMC who has operated the repeater for the past six years says that he has submitted a request to the FCC to grant him special dispensation. This, so that the callsign W6MEP can remain on what is the oldest continuous operation repeater in the world.

*the code requirements, and i am blind on top of all that.
****

The code provision had to remain due to treaty. The ITU requires that all amatuer licensees operating under 30MHz must have proficiency in code. The ITU does not mention at what level is considered proficient. I got my Tech class license in 1977 and the 80 M band was not any better than it is now. I also have a BSEE degree and feel that element 4A and 4B are easier than many of the EE classes that I took. I just see no need for element 1B, and 1C. To me it does not mean I will operate on 3890 KHz any better or worse. Besides to operate on 80M phone you must have to operate with a general class license or higher. Until 4/15/2000 that still requires a minimum of 13WPM code. If I were to try and draw some conclusion from you post, it may seem that as one becomes more proficient in code, one becomes a better operator. BUt at this time I will try and refrain from such endeavor.

Cecil:

Agreed. The same kind of comments were raised in 94 and in 87. The CBer are comming!. I did not know they were even breathing hard!.

No the sky is not going to fall in. There is not going to be the mass migration from the CB band to the HAM band. The only way that will happen is for the code requirement to drop totally and I do not see that happening for 10 to 20 years from now. The matter has tried to get on the docket for the ITU annual meetings the last three years. It has been shelved evrytime. The last I heard the matter is dead until 2001. So for many amatuers th at think the sky is falling in, look up it is not. What will happen is there will be large number of upgrades withing the mamatuer ranks inthe US. Extra class will replace the general class as the most issued. Not code tech and general class will remain the least issued. The influx of new licensees will most likely not exceed 20K per year. The exit rate due to lack of interest and death will still most likely come close to or exceed that number. Still after 5 to 10years the amatuer population will still be smaller than it is today.

No...to get Extra upgrade after April 15 you need CSCE for general and extra written and proof of 5wpm. I do not see where you would need to have passed the advanced. I believe you can take any written test you want at any time although most progress logically through the elements I don't think that progression is a requirement.

Some years ago, those CW subbands were renamed digital subbands. So
you're proposing that phone, packet, RTTY, and code should all
intermingle? (RTTY on 3950 and 14313? Maybe that's not a bad idea!)

Y2K! gotta horde water Y2K! the world is ending Y2K! raise rabbits for food Y2K! .....whoops, wrong topic, same outcome.

We will wake up on April 16, 2000 and ham radio will be the same.

We will wake up on April 16, 2001 and ham radio will be pretty much unchanged.

Get over it! Life and Ham radio will go on.

Its changes will have more to do with the advancement of technology than CW requirments.

Hey, I got one for ya! The latest "politics" of ham radio, and the hate and disregard I have watched and heard sends me running. I am not relinquishing my license, I enjoy *some* of ham radio a lot. But, I have my eye on nice shiney new Cobra CB radio that I am going to get...and I am going to run just as fast as I can back onto a band where I never experienced all this amateur radio brotherhood stuff (you know, the insults, degradations, threats, etc.). I have been a licensed amateur for about the last five years. I have been on and off CB all my life. Just before getting my license I was introduced to SSB operations on CB. Lots nicer, lots nicer....

So, that's some irony, eh? Maybe you doomslayers are wrong. Maybe lots of folks will get back to the friendlier band...CB

Is your ego really this weak, that you would need such childish display?

Either you can maintain a solid perfect fist at 20 wpm NOW and HERE, or
you cannot. If your speed of code and its intellegeability can not con-
vince others about you ever having been able to copy and send prefectly
at 20 wpm, then signing

"K7JOE/once upon a time I was able to copy enough from a
20 wpm test and to guess the rest, that I was able
to answer all question satisfyingly and pass the test"

will not make any difference about what your CW capabilities
are NOW and HERE. "Hic Rhodos, hic salta !"

1242. BUY the ham bands?

Jeff,

Why not spend a few bucks a month and get your very own personal
internet access? That way you wouldn't bring the University to the
table every time you say something insulting or stupid.

Juno is available for $9.95 a month and works quite well in Hawaii.
I too, am employed by a University but they have no interest or
involvement in my amateur radio activities so I don't post from their
servers. The little bit I pay each month gives me the freedom to share
with you when I think you are being an ass.

73 Jerry

Source record: 122523

Come on ... my wife (N4IEI) passed the advanced ticked and didn't (doesn't) know the difference between an electron and an electrolux. She's brilliant -- it just didn't matter. Dick Bash did the rest. Shortly after passing the 13wpm code she couldn't recognize a single letter in code. Again, all short term memory for a particular purpose ... sort of like memorizing a phone number for a call and then a clean slate immediately afterwards. My point is that quality of operation isn't assured by having a code requirement (look at the current state of affairs on certain bands) . Committment, concern for others, and quality operation can still be attained if we will educate the newcomers and illustrate by example the type of operators we hope they will become. It's great to see the hobby on the verge of expanding!

Very well put Fred. I have never used CW on-the-air and never intend to
do so. I have forgotten much of it. I agree completely with your remarks.
A great example and well-worded. I would much rather see courteous
conscientious operators come into the hobby with 5 wpm then more of the same
20 wpm jerks we see on 20M and 75M......

Jerks are all over, I must apoligize about the elitist attitudes found
in ham, one of the reasons most people arn't interested.

I am not
> relinquishing my license, I enjoy *some* of ham radio a lot.

Amateur Radio has a lot going for it, the changes will make it easy for
some people to get licenses, fer sure but, the ones seeking out ham
radio in the 21st Century will be for different reasons than most
earlier hams. A trucker friend of mine has expressed interest in
getting an upgrade and his wife licensed so they could communicate while
he is on the road, a guy working on the boats in the Gulf of Mexico has
the same idea and I see a future for improved technologies.

But, I
> have my eye on nice shiney new Cobra CB radio that I am going to
> get...and I am going to run just as fast as I can back onto a band where

Extending your fantasy, what if radio had been developed in such a
way that not only was code bypassed, but so was phone. (FAX was being
utilized over the telegraph lines in the 1800s, and so was a form of
teletype.) Would that mean we'd have no microphones today and HTs would
only have a keyboard?

KJI wasn't he the one who got off with a forged tape? I remember that.
He apparently didn't learn from that experience since Riley caught him
red handed the other night. It's going to take a REALLY good fake tape
to turn that around. But who is keeping score?

I heard your buddy Sid on 2M the other day I guess he's been in the
hospital. Look for me on APRS in Vegas I'll be there all Winter.

Mr. Strom now reveals himself. As with the other breed of cockroach, Mr. Strom cannot tolerate bright light. Let's review his response to my posting of quotes from him and my posting of folks who oppose him.

Kevin Alfred Strom wrote in message <3876C148.CCBC18A0@innocent.com>...
>What a impressively large blob of altered and out-of-context text,
>cut and pasted into a series of lies taken from several hard-left
>sites of varying degrees of neurosis. I note you even have the
>kindness to bring a family tragedy into the "discussion."

"out-of-context?" I think not. Yes, I did clip a few juicy parts but anyone who wishes is free to visit the URLs that I posted and read the whole document.

"hard-left" sites? I think not. I may have posted material that you do not agree with or do not like -- and what is "har left" after all? The opposite of "soft right?"

"family tragedy?" Looks to me as though his wife had enough and walked. Tragic perhaps to Mr. Strom but it appears as though his ex was glad to be out of the cuckoo's nest.

>
>I'm sure the intelligent reader will, if interested at all, give the
>swill exactly the credibility it deserves.

Interesting that he refers to his own material as "swill."

>
>What caused you to suddenly hit the ceiling, Joe?

"hit the c\\eiieling?" I think not. In fact, I am my usual calm self. I returned from a business trip late on Friday night and was catching up on my e-mail and NG browsing. Family was quietly reading so I amsued myself by doing a little research into hate on the web.

>
>You are displaying a remarkable degree of hysteria for a being
>presumably not equipped with a uterus.

And here we have an attack on women.
Apparently Mr. Strom dislikes and stereotypes women just as he does folks of races and religions different from his own.
What is hysterical about simply posting quotes from an individual? And why do we assume that only females are "hysterical?"

Folks like Mr. Strom cannot tolerate reasoned opposition. They build their position by surrounding themselves with sycophants who cheer and applaud their every word. Let someone slip in a little simple reason and logic -- let someone quote their own words in the whole and in context thereby revealing the true identity of the person -- let someone stand up to them -- and they come all unglued and resort to nonsense.

Mr. Strom: Sir, you would do yourself a favor by not responding. The more you speak, the deeper you dig the hole.

yes, indeed, congrats, it is a personal accomplishment, however, you are
neither a 'head-above' nor better than anyone else to come for the
achievement. That takes a demonstration of good character etc. It is
time to get passed the idea that cw proficiency somehow makes a person
better than someone else in areas other than cw proficiency.

Social misfit and known stalker n8wgm@aol.com (N8WGM)
desperately backpedaled and whined the following EXCUSES:
>Roger wise ass said.....

Try and think up something ORIGINAL, willya? It's not like I've EVER

I momentarily forgot about your mental disabilities.

>>TON Duhhhhhhhhhhh (N8WGM) is a wannabe survivalist and >>detective.

>Sorry---no I'm not-------on either account.

Oh, Is that why you've posted to survivalist newsgroups, then?

>I do believe that people should be prepared. As far as being a
>detective.....I do have connections to the law enforcement
>community...I have a few relatives and friends that are in law
>enforcement.I can get any information I need. But I
>wouldn't waste my time with you.

So in other words, you'll ILLEGALLY get any information, for your own
agenda, irregardless whether or not you would normally have access to
that information, is that it? However, shoud I or somebody else do the
same thing, you would be the first one crying and whining how your
privacy was violated. What a lousy hypocrite.

>>He tried to stalk me and harass me by telephone. Additionally, he
>>tried to ILLEGALLY TAPE RECORD my phone conversations, >>without my
permission, which is wiretapping.

>Roger---you are dillusional. I did not try to stalk you.

BULLSHIT. You made several postings on THIS newsgroup during the week
BEFORE your visit, saying you were going to come by, take pictures and
post the information on the net. I told you specifically that I did not
want to converse with you or be visited by you, but you came by here
anyway. You posted a written transcript of the phone "conversation,"
which, I might add, you said you TAPE RECORDED.
No mention of tape recording was made when you called my house.
That is WIRETAPPING. Just like Linda Tripp, Watergate, etc.

>I was in the area for two reasons.
>One to visit my uncle who is retired and living in Wheeling. By the
way->-he's a retired police officer and made the observation that you
were >jamming 20 meters.

BULLSHIT. You taunted me on the newsgroups in your inept way saying you were going to come by my house. Backpedal a little harder, because you're just barely trying to cover your ass.
I checked my Buckmaster callbook by name, which I suppose your uncle has the same name as you. Guess what, NADA!
Caught you in yet another LIE.

>He rode down your street with a receiver and found that you were the
>one jamming.

Oh, did he? Is he a ham? Or is he just a SWL? I can just imagine the noise on his Radio Shack analog dialed reciever.....your inept uncle trying to drive and tune in to the frequency. So you had somebody do your dirty work for you, huh? Pussy.

Another point: In Riley's letter, there was NO SPECIFIC Frequency or time mentioned. I wonder why that is?

>The second reason was to go to the casinos. You were just a sidebar
>on the way to where I was going.

So, so the self-righteous TONDuhhhhhhhhhhh has a gambling problem, too? What a surprise.

>You were afraid to come out of your house and our conversation was
>less than 20 seconds. You asked me to kiss your ass and
>then you hid behind your curtains.

No, DUMBFUCK, if you had paid attention in English class, you wouldn't have misunderstood what "You are not welcome at my house" meant.
I told you to kiss my ass when you perversely asked me outside.
Obviously, you lack the education to understand insults.
Oh, and dumbfuck, I didn't hide anywhere. I.) We have ventitian blinds in the tv room, and 2.) I have better things to do than talk with a scumbag like you.

> I was not going to record you without your permission---I allways

You are a liar. Plain and simple. You thought you could intimidate me somehow, but you got p.o.'ed when I wouldn't play your little game. You went out of your way to stalk me. Oh, and the word is "always," you illiterate imbecile.

>record my cell phone for business reasons.I always tell the people on
>the other end they are being recorded. I was in your neighborhood for
>less than 3 minutes.

Yeah, but I did not EVER have any business dealings with you, and you did not mention that you were tape recording at all.

> If that is stalking--then please call the FBI and the sherrif and have me >arrested right now. I'll gladly sit back and watch them then go after you >for being such a moron.

"Sheriff," dumbass. Who I will call, however, is a tutor for your atrocious spelling and discursive writing. Heh, one who can't spell a simple word like "always," shouldn't be casting dispersions upon others.

>>He's obsessed with me and would go to great lengths to take my
>>picture for whatever reason.

>Yeah great lengths--like just park outside your house for 1 minute to
>ask you to come out which you did not do.

Why would I do what a friggin' moron like you asked? I suppose I somebody asked you to put a loaded gun to your thick skull and pull the trigger, you'd do it.

>And I 've not returned.

Thank god for that. It took the city of Glen Dale a week to get the stench out after your departure of our fair city.

>Why are you so afraid of having your photo taken?

I'm not. But I have the choice whether or not I have it taken, don't I?

>I guess you are deformed as I have stated in my previous posting.

I guess you have your head permanently stuck up your ass.

> And anyone can photograph you without any problem.... Your house is
>less than 15 feet from the road.

Poor math skills which complements your substandard English skills.
My property line begins at 10 feet from the road, where the sidewalk intersects my front yard. That would put the 15 feet about 1/4 of the way into my front yard, liar.
BTW, as an experiment, I went out to the road and looked at my front windows. Because of the double paned energy efficient windows and a screen, it would be difficult to see anybody standing in the window.
Caught you again, liar.

>Typical lower middle class hillbilly type house.....no front
yard....small
>side and back yard and a house of less than 750 square feet.

The lot is 50' wide by 100' long. The house was built in 1927.
It certaintly has more than 750 sqare feet, so get your coke-bottle glasses fixed.
And We're more upper middle class, stupid.

>>I speculate he wants it to masturbate to.

>Stop fantasizing Roger---you must be thinking of masturbating all the
>time...That's alll you seem to be thinking of in all of your posts.
>----Roger wiseman thinks that men maturbate while thinking about
>him......perverted isn't he?

Steve Tunder, in denial. By the spelling and punctuation errors in this section, I'd say I hit a nerve.

>One can only guess why he wants to live in a "house"
>built underground,

>Roger--obviously you are not of any intelligence in reguards to
>construction, architecture

Steve, it's painfully OBVIOUS that you are an uneducated, simple fool. The correct word is "regards." And I know something about construction and architecture, thanks to some drafting classes, and working construction during the summer while attending college.....
Poor baby, It really pains you to know that I know, doesn't it?

>and using the earth as a flywheel to mitigate the need for
>external fuels to heat and cool a home or other buidling.

What's a "buidling?"

>I have superior fenestration and use it to heat the house in the winter.

That is the ONLY thing you have that is superior.

>During the summer.....I do not need air conditioning.....my house
>stays around 68 to 73 degrees due to the design of the house.

Nobody gets too hot up north during the summer, you dumbass.
My house stays cool due to the INSULATION. How does the fungus grow down in the ground? Do you have a good crop of relatives-er, mushrooms?

>If you want to keep paying the electric and gas companies to stay
>warm and cool.....then you indeed are dumber than I think.

Bwhahahahahahahaha..... When you have the money, it doesn't matter.
Besides, what do you care?

>ROGER---in my final comment to you.....I will say this--you do have
>the guts to put your name on your posts. It takes a lot of guts to put
>your name on some of those postings you make. Anyone reading >them
would think my god what a moron.

PKB, Pee Wee. At least can communicate with people at different levels, which is more than you can say.

>Your posts are hatefull and inane with a dash of acerbity added.. I

Hey, STUPID, "hateful" only has one "l."

>find them to be a waste of time to respond to and will not repsond to
>them again. You will be on my filter to remove.
>73's--and good luck to you with your campaign to make everybody >hate
you.
>N8WGM

SPANK! No staying power.
YOU are the one that attacked me on here and stalked me. The only
reason I am responding to this post is because it was e-mailed to me.

And an even larger percentage of folks could NOT care less about you
or things you feel are important in your life, yet those things are
still important to you, right? One thing we are assured of is that the
folks participating in this thread do care, so for calculating
our base for your percentage, we should not use "all human beings."

>> Don't worry about your pathetic little
>> world being overloaded with newbies, they aren't interested.

Again, the base for this percentage you want to use isn't "all human
beings," but rather licensed amateur radio operators.

>Exactly, there was a time when being able to communicate all over the
>world using your own shortwave equipment was a fascinating thing, today
>anyone can pull a cell phone out of their pocket and call almost anyone
>anywhere in the world.

If you don't mind using millions of miles of telephone company cables
and billions of dollars of corporate- and government-owned computers.

The attraction to worldwide communications via amateur radio is that
one has very little dependence upon those things cellphone and inter-
net users depend on.

>Most people don't ever know what ham radio is (or
>think it is cb radio) and could not care less.

That's the way it's always been. Most people don't care about coin-
and stamp-collecting, but that fact doesn't diminish those hobbies.

Really? Try pulling up alongside someone with a cell phone and shout out your window, "hey I'm talking to Australia on my mobile ham rig, ain't that impressive?" They will really be impressed as they dial a few numbers and talk to someone in Hong Kong with no fading or static. They don't care how it's done, your ham set isn't going to impress them one bit.

Perfidious <perf@inlandcars.com> wrote:
>I'm curious, how does the amateur radio community help police locate these
>folks?

It usually begins with the PD comms officer contacting an ARES or RACES amateur radio unit to request direction-finding assistance, something hams have become well-known experts at. We use direction-finding antennas to get two or more LOP (lines of position); where the lines intersect is the location of the offending transmitter.

>Are they (or you) using, Operating, monitering these freqs?

It's done with DF antennas and receivers; no transmissions need be made.

>Foxhunting on police bands? how does that work?

I just told you.

>get a life... talk to your friends on the bands and quit playing detective...

Wrong response. When asked to help, we gladly assist. Again, hams are recognized experts in RDF work. In the past amateur radio operators have been asked to assist in conducing RDF work to locate lost hikers and downed aircraft. Should we have declined those offers, as you suggest?

>dont make yourself out to be something you're not.

We're not. But when asked to utilize our expertise in communication matters, we'd gladly assist. I assume you wouldn't.

> And assuming you have a business of your own.... try minding it.

Uh oh, does that mean you're bothered by the thought of our ability to determine your location by tracking your radio transmissions? =:o

Think about this, if radio had been developed by-passing spark-gap,
which necessitated using Mores code, but the developed took radio
```

straight into the development of phone operation, would there ever have been a CW test to obtain an amateur license? If not, then would ham radio have died out long ago because there was no CW test to prove one would be a good operator? It is time to put less emphasis on the CW testing and more on learning the technical and operating side of ham radio.

Yes but the CBers don't, and look what they did to "their"
band. Do we really want ALL of them on the ham bands?

Sorry Cecil it has gotten a fraction easier they only have to
pass one test not two, and it is tohoped that the one test will
include VHF stuff basicly since that is waht the license will cover,
rather the odd anomaly of existing exams.

OTH I do agre not enough basic change exist to expect that
somebody currently operating radios (CB or Pirate Ham or whatever)
without bothering to obtain one of our license is going to sudenly
decide to get one

I've used a 6m 5/8s wave Larson mag-mount for 9 years with very good results. Then, I started drilling holes and stayed with the Larson 5/8s. I tried (and still use) a ball/spring assembly with a very cut down steel (RadioShack CB) whip cut for 1/4 on 6. It's not as broad-banded as the Larson (that covers the entire band nicely). I carry 2 whips, one for the ssb/simplex or low end of the band and one for the fm/repeater or high end. Both work very well.

Good luck.

Yes, it is incredibly "evil" for a man to want his own people to
survive, or even to recognize that they are endangered.

At least many lemmings seem to think so these days.

I do encourage those still capable of independent thought to look at
the Stormfront site, and especially my article on the man who called
himself "Martin Luther King."

Happy Internetting,

Being that the restructuring R & O leaves existing
amateurs unaffected, advanced class licensees can apply
for vanity calls exactly like they have since the system
went into effect in 1996. No NEW advanced class licenses
will be issued after April 15th, but those who already
hold advanced class licenses can apply for vanity calls
under existing guidelines.

For the enlightenment of visitors to this newsgroup, here is a listing of suggested readings re: Kevin Alfred Strom.

http://www.splcenter.org/cgi-bin/goframe.pl?refname=/intelligenceproject/ip-4i4.html Contains an interview with Mr. Strom's ex:
QUOTE
A former insider speaks
For four years, Kirsten Kaiser, 36, lived with her husband on or near the West Virginia compound of William Pierce, the leader of the neo-Nazi National Alliance and author of the racist fantasy novel The Turner Diaries. Kaiser was married to Kevin Alfred Strom, who co-hosts Pierce's racist and anti-Semitic radio show and is one of Pierce's closest associates. In that role, she got to know Pierce's inner circle and some of its members' thinking. Over the nine years of her marriage, Kaiser came to question the violently racist views of the Alliance -- especially after the deaths of 19 children in the Oklahoma City bombing, which was patterned on an attack portrayed in The Turner Diaries. Today, she is living in Minnesota and going through a divorce from Strom. The Intelligence Report interviewed Kaiser about her life and acquaintances inside the Alliance, and how she came to leave.

http://www.jdo.org/nazi.htm And scroll down the page to the entry for National Alliance

http://www.whiteracist.com/Jew.html

http://www.adl.org/poisoning_web/kkk.html

This page contains the following paragraph:
QUOTE
Now led by Shane Crowe of Louisiana, this group has numerous sites on the Web as well. Unlike Robb's sites, those of the Michigan faction do not soft-pedal their bigotry. At the Web site of its Oregon chapter, this Klan openly and honestly declares, "we believe in White Supremacy. The Klan believes that America is a White man's country, and should be governed by White men." Blatant extremist views can also be found at the national Web site for Crowe's Klan, which features a prominent link to Stormfront, the text of Kevin Alfred Strom's "The Beast Is Saint," and a reprint of Henry Ford Sr.'s "classic" anti-Semitic text, The International Jew.
END QUOTE

http://spinoza.tau.ac.il/hci/spe/anti/internet1.html scroll down the page to the table

http://www.sociology.org/content/vol003.002/kallen.html Where you will find this quote:
QUOTE
Excerpted from: "Evil in High Places", by Kevin Alfred Strom.

THERE IS EVIL IN HIGH PLACES in America today... because there has been a revolution in this country and the American people lost. The revolution... the takeover of America by [Jewish] aliens and the traitors who served those aliens... was engineered and executed by the same forces who... brought the scourge of Communism to Europe.... The Jewish revolution is now complete - but the revolutionists feel far from secure. Now that they are in power, their main concern is staying there... They want to infiltrate agents into groups they merely suspect of lawbreaking. And who do you think they "suspect"? The Mafia? Jewish organized crime gangs in New York and Los Angeles? Homosexual activists who fling AIDS-infected blood at innocent churchgoers? Jamaican cocaine dealers who kill almost with impunity on our city streets? No. It is you and I, it is anyone who opposes their evil agenda, it is anyone who wants a return to the values that made America great... They would take away the last of our freedoms, the freedom to speak, and they would frame, they would plant evidence, they would lie, they would kill to stay in power .
[I urge you to] speak out against those who would turn our beloved America into a brutal Third World police state.... When our people realize that hundreds of thousands of us are speaking out, they will join us, and when enough of them do that, we will be the state - the American government will once again be in the hands of true Americans. The outward-bound 747s will be... overloaded with traitors and alien subversives and their ill-gotten lucre, heading for Israel or elsewhere where their evil revolution may still be in power. But the Jewish revolution will be finished here. America will be America once again. And our sons and our daughters will be able to look with clear eyes into a future once again brighter than the sun.
END QUOTE

http://www.patriot.dk/Pearlharbour.html

http://www.ferris.edu/htmls/othersrv/isar/Institut/CCC/sharks.htm Where you will find this gem:
QUOTE
British neo-fascists and youth
Wider-ranging recruitment efforts are currently under way. While the council has been largely made up of aging southern proponents of "the lost cause," last year it began an effort to recruit a younger generation of followers, setting up an education committee and a youth chapter.
The youth chapter was developed by Mark Cotterill, using the false last name

Cerr, around Washington, D.C. Cotterill, a Briton, is said to have brought 100 young people into the CCC. What Cotterill doesn't boast openly about are his connections to the National Alliance — his friendships with Alliance founder William Pierce, and Pierce's chief deputy, Kevin Alfred Strom. Pierce's novel of a future race war, The Turner Diaries, served as the blueprint for the deadly 1995 bombing of the Oklahoma City federal building.

Cotterill is well known in Britain, which he left three years ago. There, he was associated with the neofascist National Front and its successor, the British National Party, as well as American distributor of a far-right periodical, Right Now. He also has been linked to the Ulster Defense Association, a paramilitary Protestant group in Northern Ireland.
END QUOTE

http://hatewatch.org/who/pierce.html Mr. Strom may have a real future:
QUOTE
Presenting an image of restrained academic bookishness in front of main stream media, Pierce is more blunt in the company of "friendlier" audiences. Shortly following the death of poet Allen Ginsberg, who was Jewish and gay, Pierce stated frankly that he believed that persons who published material such as Ginsberg's should be shot. This speech was reproduced at his Web site, which is emblazoned with the motto "Free Speech." He also once wrote in an Alliance encyclical that "all the homosexuals, race-mixers and hard-case collaborator in the country who are too far gone to be re-educated can be rounded up, packed into 10,000 or so cattle cars, and eventually double-timed into an abandoned coal mine in a few days' time." This statement is, of course, eerily similar to the actions of Hitler's Third Reich.

Despite Pierce's stark neo-Nazism, the National Alliance is a consistently growing organization, research shows. Pierce has actually been successful in starting National Alliance chapters nationwide including the New York metropolitan area which has one of largest Jewish populations in the world. National Alliance meetings begin with a roll-call of members (first names only) but always include the names of three specific individuals: Revilo Pendleton Oliver, a deceased, Illinois-based professor of Classics who wrote several racist and anti-Semitic tracts during the 1960s to 1980s, Bob Mathews and David Lane of the Order. At the calling of these three names, all members present shout "Here!"

Now In his mid-60s, it is unclear who will follow Pierce when he dies. Speculation that he would be succeeded by his media-savvy lieutenant Kevin Alfred Strom lessened when Strom left the National Alliance (at least publicly) nearly two years ago. This was also the case with Milton John Kleim, Jr., Pierce's one-time "point man" for the Internet who is in his mid-20s, but he too has left the National Alliance, and the far-right, racist movement altogether. Kleim has thoroughly recanting his previous points of view. Pierce's most visible lieutenant is his North Carolina lieutenant, Will Williams. But Williams, with his southern accent and inability to harness his blatantly racist point of view into anything that can sound even remotely rational, would not likely be a successor that would

be sanctioned by Pierce. However, if Pierce does not have a hand-picked successor, then the future of the National Alliance without a William Pierce would seem in question.
END QUOTE

http://users.erols.com/murple/propaganda/racist/mlking.html

http://www.faem.com/oliver/oliver-1.htm

http://www.loop.com/~bramble/conspir.html
QUOTE
Dave Middleton, editorializing in The Capital Christian News, the Christian Coalition's publication for Rensslaer County, NY, believes that the U.N. is poised to take over the U.S., aided by (Jewish) humanists and scientists. Middleton claims that three orbiting satellites can project 3-D holograms onto the planet and people "will be fooled by the false signs and wonders" into accepting the invasion.
The ancient paranoia has resurfaced in response to the modern plague: An organization in Orange County, California, believes that HIV was created by the KGB as part of a plot to take over the U.S. According to this theory, mandatory quarantining of HIV-positives is the only way to stop the Communist invasion.

Christian Identity Online features one of the finest HIV-conspiracy speeches. Kevin Alfred Strom, speaking on the "American Dissident Voices" radio show (July 10, 1993), blames the spread of HIV on "the homosexualization of America" through "the power of organized perversion" and "the controlled media." The media, of course, is run by "the multicultural, one-world agenda" of the "forces behind Liberalism" -- those pesky Jews!

Strom pumps up the volume when he tells people to avoid the "trendy, fashionable part of town whenever possible," as "this is often where the highest percentage of homosexuals are to be found." People should move into "racially, culturally, and medically healthier" [read: racially pure] areas that offer lower risks of contact "with those in high-risk groups, including Blacks, Third-World immigrants, homosexuals, and drug users."

And don't think that crazy ideas about gays spreading epidemics started with Christian fundamentalists. After the original outbreak of Black Death in 541, Emperor Justinian decreed that people had provoked God to anger and retribution because of "perpetrating vile acts with other men

Ed Hare, W1RFI (w1rfi@arrl.net) wrote:
: D. Townsend wrote:
[snip]

: Yes, indeed; there will be lots of new HF hams over the coming months.
: Most will come from the ranks of experienced and already-licensed hams,
: so Elmering won't be a major problem. What I am curious to see is how
: many folks over the coming months take and pass the General or Extra
: WITH a 5 wpm test.

Ed, Some of them (myself for sure) are going to take the Adv and Extra
test just to prove to ourselves that it WAS the code test that held us
back for 40+ years.

: Those that are working on the code may want to consider trying to hook
: up with an experienced code op (I am quite willing to help in the
: central CT area). FISTS runs a Code Buddy program that may help. I have
: always suspected that many VHF Techs didn't find learning the code worth
: it for the small slivers of band a Tech+ can use, but that the General
: priveleges might be enough "incentive" (to use the I word) to do so.

I've got one for you, I talked to an old time General who got all upset
that the code test is to be 5 WPM even though he never used code once he
got his general 35+ years ago. Reason, (direct quote), "I had to do it....."

And to top it of he has no intention of trying for a higher class
license. Yet I'm sure you will find many Tech+s giving it a try. (Status
quo in full command as I see it)

: Out of that, I sure hope to see a few CW ops develop; it is a fun mode
: that lends itself nicely to simple equipment and homebrewing. Those in
: apartments may find CW to be a bit more effective with marginal antennas
: than SSB, if they want a "human" mode of communication. Some of the
: digital modes can be even more effective, for keyboard-keyboard
: contacts. No matter what, the most important thing will be for those
: who obtain new priveleges, or become licensed for the first time, to use
: them on the air and learn about different modes and different fun things
: to do with ham radio.

Exactly!!

A former insider speaks
For four years, Kirsten Kaiser, 36, lived with her husband on or near the West Virginia compound of William Pierce, the leader of the neo-Nazi National Alliance and author of the racist fantasy novel The Turner Diaries. Kaiser was married to Kevin Alfred Strom, who co-hosts Pierce's racist and anti-Semitic radio show and is one of Pierce's closest associates. In that role, she got to know Pierce's inner circle and some of its members' thinking. Over the nine years of her marriage, Kaiser came to question the violently racist views of the Alliance -- especially after the deaths of 19 children in the Oklahoma City bombing, which was patterned on an attack portrayed in The Turner Diaries. Today, she is living in Minnesota and going through a divorce from Strom. The Intelligence Report interviewed Kaiser about her life and acquaintances inside the Alliance, and how she came to leave.

QUOTE
Now led by Shane Crowe of Louisiana, this group has numerous sites on the Web as well. Unlike Robb's sites, those of the Michigan faction do not soft-pedal their bigotry. At the Web site of its Oregon chapter, this Klan openly and honestly declares, "we believe in White Supremacy. The Klan believes that America is a White man's country, and should be governed by White men." Blatant extremist views can also be found at the national Web site for Crowe's Klan, which features a prominent link to Stormfront, the text of Kevin Alfred Strom's "The Beast Is Saint," and a reprint of Henry Ford Sr.'s "classic" anti-Semitic text, The International Jew.

QUOTE
Excerpted from: "Evil in High Places", by Kevin Alfred Strom.

THERE IS EVIL IN HIGH PLACES in America today... because there has been a revolution in this country and the American people lost. The revolution... the takeover of America by [Jewish] aliens and the traitors who served those aliens... was engineered and executed by the same forces who... brought the scourge of Communism to Europe.... The Jewish revolution is now complete - but the revolutionists feel far from secure. Now that they are in power, their main concern is staying there... They want to infiltrate agents into groups they merely suspect of lawbreaking. And who do you think they "suspect"? The Mafia? Jewish organized crime gangs in New York and Los Angeles? Homosexual activists who fling AIDS-infected blood at innocent churchgoers? Jamaican cocaine dealers who kill almost with impunity on our city streets? No. It is you and I, it is anyone who opposes their evil agenda, it is anyone who wants a return to the values that made America great... They would take away the last of our freedoms, the freedom to speak, and they would frame, they would plant evidence, they would lie, they would kill to stay in power .
[I urge you to] speak out against those who would turn our beloved America into a brutal Third World police state.... When our people realize that hundreds of thousands of us are speaking out, they will join us, and when enough of them do that, we will be the state - the American government will once again be in the hands of true Americans. The outward-bound 747s will be... overloaded with traitors and alien subversives and their ill-gotten lucre, heading for Israel or elsewhere where their evil revolution may still be in power. But the Jewish revolution will be finished here. America will be America once again. And our sons and our daughters will be able to look with clear eyes into a future once again brighter than the sun.

QUOTE
British neo-fascists and youth
Wider-ranging recruitment efforts are currently under way. While the council has been largely made up of aging southern proponents of "the lost cause," last year it began an effort to recruit a younger generation of followers, setting up an education committee and a youth chapter.
The youth chapter was developed by Mark Cotterill, using the false last name

Cerr, around Washington, D.C. Cotterill, a Briton, is said to have brought 100 young people into the CCC. What Cotterill doesn't boast openly about are his connections to the National Alliance — his friendships with Alliance founder William Pierce, and Pierce's chief deputy, Kevin Alfred Strom. Pierce's novel of a future race war, The Turner Diaries, served as the blueprint for the deadly 1995 bombing of the Oklahoma City federal building.

Cotterill is well known in Britain, which he left three years ago. There, he was associated with the neofascist National Front and its successor, the British National Party, as well as American distributor of a far-right periodical, Right Now. He also has been linked to the Ulster Defense Association, a paramilitary Protestant group in Northern Ireland.
END QUOTE

http://hatewatch.org/who/pierce.html Mr. Strom may have a real future:
QUOTE
Presenting an image of restrained academic bookishness in front of main stream media, Pierce is more blunt in the company of "friendlier" audiences. Shortly following the death of poet Allen Ginsberg, who was Jewish and gay, Pierce stated frankly that he believed that persons who published material such as Ginsberg's should be shot. This speech was reproduced at his Web site, which is emblazoned with the motto "Free Speech." He also once wrote in an Alliance encyclical that "all the homosexuals, race-mixers and hard-case collaborator in the country who are too far gone to be re-educated can be rounded up, packed into 10,000 or so cattle cars, and eventually double-timed into an abandoned coal mine in a few days' time." This statement is, of course, eerily similar to the actions of Hitler's Third Reich.

Despite Pierce's stark neo-Nazism, the National Alliance is a consistently growing organization, research shows. Pierce has actually been successful in starting National Alliance chapters nationwide including the New York metropolitan area which has one of largest Jewish populations in the world. National Alliance meetings begin with a roll-call of members (first names only) but always include the names of three specific individuals: Revilo Pendleton Oliver, a deceased, Illinois-based professor of Classics who wrote several racist and anti-Semitic tracts during the 1960s to 1980s, Bob Mathews and David Lane of the Order. At the calling of these three names, all members present shout "Here!"

Now In his mid-60s, it is unclear who will follow Pierce when he dies. Speculation that he would be succeeded by his media-savvy lieutenant Kevin Alfred Strom lessened when Strom left the National Alliance (at least publicly) nearly two years ago. This was also the case with Milton John Kleim, Jr., Pierce's one-time "point man" for the Internet who is in his mid-20s, but he too has left the National Alliance, and the far-right, racist movement altogether. Kleim has thoroughly recanting his previous points of view. Pierce's most visible lieutenant is his North Carolina lieutenant, Will Williams. But Williams, with his southern accent and inability to harness his blatantly racist point of view into anything that can sound even remotely rational, would not likely be a successor that would

be sanctioned by Pierce. However, if Pierce does not have a hand-picked successor, then the future of the National Alliance without a William Pierce would seem in question.
END QUOTE

http://users.erols.com/murple/propaganda/racist/mlking.html

http://www.faem.com/oliver/oliver-1.htm

http://www.loop.com/~bramble/conspir.html
QUOTE
Dave Middleton, editorializing in The Capital Christian News, the Christian Coalition's publication for Rensslaer County, NY, believes that the U.N. is poised to take over the U.S., aided by (Jewish) humanists and scientists. Middleton claims that three orbiting satellites can project 3-D holograms onto the planet and people "will be fooled by the false signs and wonders" into accepting the invasion.
The ancient paranoia has resurfaced in response to the modern plague: An organization in Orange County, California, believes that HIV was created by the KGB as part of a plot to take over the U.S. According to this theory, mandatory quarantining of HIV-positives is the only way to stop the Communist invasion.

Christian Identity Online features one of the finest HIV-conspiracy speeches. Kevin Alfred Strom, speaking on the "American Dissident Voices" radio show (July 10, 1993), blames the spread of HIV on "the homosexualization of America" through "the power of organized perversion" and "the controlled media." The media, of course, is run by "the multicultural, one-world agenda" of the "forces behind Liberalism" -- those pesky Jews!

Strom pumps up the volume when he tells people to avoid the "trendy, fashionable part of town whenever possible," as "this is often where the highest percentage of homosexuals are to be found." People should move into "racially, culturally, and medically healthier" [read: racially pure] areas that offer lower risks of contact "with those in high-risk groups, including Blacks, Third-World immigrants, homosexuals, and drug users."

And don't think that crazy ideas about gays spreading epidemics started with Christian fundamentalists. After the original outbreak of Black Death in 541, Emperor Justinian decreed that people had provoked God to anger and retribution because of "perpetrating vile acts with other men

There you go again, quoting something Wayne Green wrote. Look, the poor
old guy was/is a kook. He wrote electric shock therapy would cure AIDS.
My collection of 73 went back to issue #2. Please state which issue he
said that 10-codes should be (or are being used) on a national scale.

>>>In Southern California in the 60s, there were no 10-codes being
>>used on 2m.

>You have the same problem that you accuse me of. Since you didn't monitor
>*all* the repeaters, and *all* the simplex FM, *all* of the time, how could
>you know for sure??

Easy to do. There originally was only one repeater, and one simplex
channel.

>But this happened before the repeater fad took place. It was when all those
>surplus taxi and police VHF FM trunk mounted (tube) radios first became
>available.

Yes, the 2-channel Motorola mobiles (some were single-channel). There was
one simplex frequency (there were so few users that everyone hung out on
that single frequency.) Crystals were expensive.

>Before that 2 meters was mostly AM with rigs like the Gooney Box...

Yes, "Gonset Communicators," or "Gooney Birds" as they were called.

> insult.

> Thank you. Hans Brakob

Universities are a bastion of free thought, free expression, and free speech. Many of history's more radical movements began on college campuses. It's not likely they'll ask me to publicly apologize for my innocent response to your wanting to eliminate class structure within amateur licensing.

Is this how it's going to be? Complaining to ISPs instead of formulating NG counterarguments to responses made to your comments? Trying to muzzle your opponents by taking their comments out of context (you didn't even include the NG article containing your original comment in your complaint) is the most underhanded type of play. You should be ashamed of yourself.

Jeff

Roger the Dodger--can't take the heat...
Quit your whining Roger.....you like to bring attention to yourself.....so you did....and you got caught jamming.

You make insults to everybody and you expect no-one to call you on your Bullshit.
Go ahead and keep looking out your window.....paranoid boy.
Call the police---go ahead..I won't be there.I have better things to do.
Can't stand the fact that you're being watched by a former police officer.....huh Thanks uncle John for catching this guy and his jamming on 14.313. I lent my uncle my Sony 2010. Self policing is great.Especially when it's by a retired police officer.
Don't worry Roger.....I can't spend any more time on you. But keep on posting about me....I have you wrapped around my little finger. Jammer boy can't jam when he's posting like a boy posessed.
All you folks out there----check out the Rain Report and the letters. Old Roger's letter From Riley is there.
Jammers should pay a price of loss of license and forfeiture of money.

Oh and by the way---it looks as if somebody wants this argument to continue....they love to be entertained by a flame war.....Sorry---I no longer want to entertain you.

Yes, a 5/8~ 2-m whip will work as a 1/4~ whip on 6-metres. You may
have to do a little trimming, but it will work. And as you probably
know 5/8~ 2-m whips are easy to find and cheap as dirt.

Well, with the new R&O changes, I'm studying the question pools to get the CSCEs for my extra (I have 5wpm, and general theory already done as I have a pre 1987 tech). Think I know enough to pass, but I can't seem to calculate correctly "Q" given the frequency, inductance, and resistance of a circuit.

I *thought* the equasion for the reactance of an inductance is:

Xl = 2pi*f*L

and the equasion for Q:

Q = X/r

Combined:

Q = (2 pi *f*L)/r

Which yields wrong answers! :-(

What did I screw up?

Anyone want to co-author a new NPRM with me, for submission to the FCC?
In it, I will propose that as an adjunct to increased *levels* of
enforcement activity by the FCC (which is actually happening a bit,
glory be!), the penalties for offenders should now include duty as a
courtesy beep. That is, if you get caught jamming, playing music, or
swearing in addition to any fine or license suspension, you must also
serve 90 days at a repeater site, going "boo-beep" everytime someone
releases their PTT switch! Better still, lets have the convicts utter in
plain English: "Thank you Sir, may I have another?"

I have heard this a lot in the past three years, but only just his very moment did it occur to me (DOH!) that it is really just the opposite. Think about this for a moment, carefully! With the elimination of the 13 and 20 WPM code tests, and the final handing over of full responsibility for the question pools to the NCVEC, isn't there now *less* commercial opportunity, as the result? All the code tapes, various subliminal and mnemonic systems, and code practice devices are now no longer marketable. The written tests may soon become easier (!) than ever, thus requiring less study and preparation. If NCI and W5YI pushed so hard for the current R&O for their own personal enrichment, it would seem one hell of a bad business maneuver.

You know, I've been in disagreement regarding this "forgive and forget" discussion over the WB2OTK racial slur incident. But I've changed my mind.

Let's rehabilitate WB2OTK. BUT....let us pattern his return contingent to the same punishment John Rocker of the Atlanta Braves gets.

After all, WB2OTK did unleash his racial tirade in public, and made it MUCH more explicit than Mr. Rocker. But as long as we send Rich in to a shrink to get him "re-programmed"....and "to get his head right", I think I might go for the idea.

Of course, if Mr. Rocker gets a demotion, so should Rich. After all, what's good for the gentile....I mean goose, is good for the jew....I mean gander.

No, no, no....I wasn't recommending that a LICENSE be forged. Just put a
piece of paper with some bogus writing in a nice frame, hang it on the
wall by the expensive rig (I didn't say that he needed to USE the radio),
and then the gentleman can have ALL of the satisfaction which he appears
to derive from his amateur radio license: A FANCY, OFFICIAL-LOOKING
L_A_B_E_L, nothing more. No need to even power-on the rig!

He said it himself, the LABEL has lost its value now that it doesn't set
him apart anymore (after restructuring). I'd like him to have a nice,
fancy, official-looking label again, so he can feel good about himself
again. If he does what I suggest, he can have the nice, fancy,
official-looking label back, but without wasting all of that time on the
distracting AMATEUR RADIO stuff.

>
> Since you think Nick spoke the truth, Does that mean you intend to
> forge a license, as Nick suggested?

No, it means that he's getting his kicks from RADIO, not from the piece of paper. It means that he can tell the difference between a superficial label (a piece of paper) which says "amateur radio" on it, and being an actual amateur radio enthusiast (unlike the gentleman to whom I was responding).

Mark, one has to be able to read and write in order to use CW. There
are a few exceptions to every rule. You seem to be the exception to
many. Maybe you'll be able to domtrate the skill enough to go for a
"gimme". If not, you'll just have to wait.

> As to popularity, it would seem that jamming profanity are
> also popular in parts of the ARSm should we all be required to prove

Only you could compare jamming and profanity skills with the skills
needed to use a popular and legal mode of operation. Your problems go
way beyond dyslexia.

> > At some point, we have to acknowlege that

Yes, IMO. That's what I stated--my O. I'll need a translator for the
rest since your written skills are as lacking as your morse skills.

> OTH it's use is neglible in the scheme of things, which is
> where we come to issue of everyone else is doing.

What the hell is THAT supposed to mean? Neglible? scheme of WHAT
things? What issue of "everyone else is doing"?

> Morse Code use is

Morse code use is a lot more "negilble" in the world outside radio.
We hams don't operate outside the ham bands on HF. Are you trying to
make a case that mode which is the second or third most popular should
be cast aside? I'm glad to learn that morse is tops in CW operation.
Who knew!

And a lot of them post behind an alias, showing they squat to urinate.

It's a shame you're jealous of those with a higher i.q..

I suppose YOU would think I have an elongated head, since my brain
exceeds the space in my cranium, while YOUR "brain (cell) is analgous
to a b-b bouncing within a vacuum in a sphere the size of a large
watermelon.

After checking out the "As the World Turns 14.313" website, I make
this observation. KC1ZQ's head looks like a dirty, worn-out tennis ball.
Zipper Queen, go get some Rogaine.
W4AMP looks as I imagined him, a obese, triple chinned bubba.
Big Al had his picture removed, which must've been used to keep the
cockroaches at bay. I guess they'll have to go back to using Raid.

Source record: 122296

I realize your post is probably in jest, so so is this reply:

Since most people can't spell (there, their) why have schools?
I mean even educated pillars of society (HAM radio operators)
can only knee-jerk react emotionally (not logically) to basic
issues (code/no code). Most folks don't think, so let's just
eliminate schooling altogether. I can see it coming.

OR, the national speed limit has been creeping up from 55MPH for
the last couple of years. My God, I can see it now, NO SPEED LIMIT
whatsoever. It's coming! Imagine adolescents blazing through school
zones (oops, we got rid of schools) at over 500MPH! It's coming! I
can see it!

Now where's that microphone? I've got some murder threats, cussing,
and racism to get done on HF.

> atmosphere that surrounds our planet. Does that give the "government"
> the right to SELL AIR? I don't think so. What I think should happen
> is we ALL (HAMS) get together and take the FCC to court for selling
> what they don't own.

The FCC regulates the airwaves in the US "for the good of the public."
The EPA regulates the air quality in the US "for the good of the public."

The FCC is auctioning off spectrum for commerical services since they were having a hard time making apolitical decisions about frequency allocations "for the public good" and people being willing to put up money is one way of figuring out this (though controversial). I forgot whether they leased it, or sold the rights outright?

The EPA and various other stste organizations regulates air quality by a series of emissions regulations, fines, penalties and measurement techniques (if you are in California you might see an electric car buzzing around, and I hear shortly some gas-electric hybrids -- all due to government regulations of the auto industry). This then gives an entry price for us to "use" the air (and since we buy the cars - we really pay it) - so in one way of looking at it - we already do so!!

:)

I think the ARRL has done a lot more damage than the FCC -- the FCC likes amateur radio due to the experimentation and things people play with -- packet radio being one example. The ARRL seems to be more interested in courting the HF crowd, of which I am not a member - and equipment manufacturers are courting those folks rather than the microwave stuff.

As a side note: I was delighted when the FCC overrode the ARRL(*) on allowing spread spectrum to have unlimited access above 430MHz and at ABOVE 1 W ERP if required for contact. I think spread spectrum is really important to amateur radio and will help with the next generation of packet radio and some voice services. But I digress.

(*)- I think the ARRL was being kind of myopic getting all conservative rather than being experimental.

I posted this once, but I think my newsserver screwed up.
Required reading for all involved in gun debates should be John Lott's
"More guns, Less crime", Univ. of Chicago Press. This is by a economist
who looked at facts and figures, not rhetoric. He actully was "anti-gun"
until he did his research. Hard facts and figures really changed his
mind.
If your gonna argue gun control, READ THIS BOOK. Just get it from your
library.

1326. Updated Motorola HT-220 Page

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-09 00:00:00 UTC
From: mikeyht220@my-deja.com
Message-ID: <85b6mj$19e$1@nnrp1.deja.com>
Source record: 122302
Cross-posted to: rec.radio.amateur,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.scanner

The HT-220 Page has been updated with UHF tuning procedures and more articles in the Tech Tips section.

This website has information including model tables, frequency conversions, parts and accessories, manual numbers, tech tips and stories.

See http://www.batnet.com/mfwright/HT220.html

Back in the 20th century when only women wore earrings and men walked the surface of the Moon, the Motorola HT-220 was the hottest handheld on the market when it was introduced in 1969.

HT-220 is Y2K compliant.

Comments about the HT220 by visitors to this webpage:

"THOUSANDS STILL IN USE."
"I never thought the old rig would attract a cult following!"
"I use both VHF and UHF models everyday."
"I've taken VHF units up to 220 MHz (a real 220 220)."
"HT220 is truly an object deserving of such a shrine!"
"It was and still is a engineering marvel."
"They are very easy to re-condition."
"I still think it is the nicest looking, most purposeful radio ever produced."
"The HT-220 still lives!"
"I cut my teeth on the HT-200 and went on to the HT-220."
"I can remember in the mid-70s the envy we all felt for the BMOC that had an HT220."
"What is that?!?" (from a generation X-er first seeing a HT220)

Why htanks you noting that I am the exception to many rules is
the kindest thing you ever said about me. OTH a great many people can
likely USE Morse code CW without being able to read or write, most of
them are subject to extreme disabilities, but that was not my point of
course something that seem to have missed (on prupose perhsp?) to
repate my piont, I cantend that many people who have taken and PASSED
a test CW likely can not use the mode today, futherthat because of the
difference between the testcondiction and real radio many of those
person (who have passed the test and can't use the mode) can't do so
fom the monemt they pass the test. Further I contend that this was the
case long before the current crop of techs existed

I really don't think I am that specail, but you want to make
things a popuality contest with the poling limited to those that you
hope already agree with you. Indeed you are unable to understand the
concept of a rhetoical position. Propfanity and esp Jamming, are as
relavent as CW skill to need of the general public.

No in this case it your reading skills there is one misspelled
word demonstrate is The point to end code testing is where it can no
longer be proved to be in the interest of the Public, this has nothing
to do with wether we (the ARS), continue to use it

>
>> OTH it's use is neglible in the scheme of things, which is

>Who knew!

I am not saying that the use of Code should be set aside
merely the testing of it. Indeed I do thank you for pointing that
Morse is even more usless in the real world of the general public.
The fact that we ham do not under normal circumstances operate
outside our band is rirelavant to wether Code use is negilble in those
areas of sepctrum. One of the pruposes of the ARS as I remind is to
privde a pool of operators for others services in emergencies. The
lack of need for morse operators outside Ham HF is a factor in saying
we do not need to maintain such a pool, but you are smart enough to
know that, You are just refusing to deal the issue arn't you?

But, you know, when criminals murder criminals, other people tend to get caught in the cross-fire.
This has been happening in a certain part of this country for many years.
The last time I saw a gun (apart from visits abroad) was shortly after WW2. and the prospect of getting shot here never enters one's mind.
As you probably know, the police strongly resist being armed because they believe that
then the criminals will become armed in response and the situation will escalate. The majority of crime seems to be formalised at an implicitly agreed level of violence and discomfort to both sides. My neighbour's rather disturbed 15 yr old son might scribble minor abuse in the ice on my car windscreen, but I feel reasonably secure that he won't shoot me.
Using a gun means stepping outside the norms into dangerous territory - and so
is relatively rare.

However, once a norm where guns are carried as an everyday habit has become established, I can see that it will be very difficult to alter, since neither side wants to disarm first.
Perhaps you might agree that as a long-term goal, eventual disarmament of
everybody, in every community or nation might be a worth-while aim?
(I hope this has not come over as anti your great country, because my attitude is quite the reverse. If the USA did not exist, the world would have to invent it.)

"Tit" is an acceptable word on British television. If I'm not mistaken, it's
even an acceptable *sight* on television in parts of Europe. Of all the
so-called "vulgar" (look up where that word came from sometime!) words you could
complain about, you seem to have picked a really lame one.

Just a wee bit curious about something. If the FCC decides in 10 or
15 years to eliminate all testing requirements for a "Ham" license,
would you be in opposition to this policy? If your answer is in the
affirmative, what would be your answer to a new age "ham" who might
berate you for being an old fashioned intellectual elite snob?

We have an RC85 with the V 5 upgrade that has picked up this peculiar problem since Y2K. It's lost the clock, scheduler, and female voice. At least that's all we've seemed to find so far. All the macros are intact and autopatch works. Anyone know a fix for this? I tried to swap out the clock module for another one but I'm not quite sure of the one I had. HELP!!

E-mail me at n9lzk@arrl.net if you have any info on this problem or are experencing this problem with the ACC RC85 and have corrected it.

One I would be in oppsititon to this sort of policy, but I
conceed some similarities. However the charge that those who suport
the then Old order as intelectuals, come on If such a movement comes
into to being I do hope for their sake they pick a better slur than
that, nobody in anything close to thier right minds is going to call
our testing procedure excessively intelectual. While I did and do
adknowledge some simlairities between the idea of NoCode and No Test,
there are big differences. One we test on rules rules knowledge in
part, something that will always be defendable by the FCC. Two we test
in part for things related to safety issues, this will also be
defendable as in the public interest. Three the current tests (i'll
not say what they are like in ten years) are not so hard as to be
burdensome on people. These three things mean that Code and the
written materail, are always going to treated differently since can
without code knowledge, operate legaly and safely, while assuring
legal and safe operation without any testing is much harder. That said
I am of the school that says , IN AN IDEAL WORLD that WE DO NOT have,
I would favor NoCode No Test, thus I view testing as a neccesary evil,
not as a good thing in it's own right. I do conceed it is possible to
chalenge the testing of anything more than a very minimal level, in a
legal sense, today. that is one CAN argue that much of the materail we
curently test for is not clearly within the power of the FCC. I do not
care to make that case, and I believe it can be beaten but a case can
be made

I hope you are all correct. I hope the code requirement doesn't make a difference.

I love CW, it's all I use, and I will be sorry to see it go as a requirement (if it ever does). If CW doesn't make a difference, will someone tell me what it is that keeps the bands from sounding like 11 meters? I have seen them (bands) through about 24 years of change, but for as bad as they seem today, they are nothing compared to 11. Why?

Sure there are people who Bash book and garbage in garbage out throught the classes, but even most of them retain something. In fact it still takes more effort to cram for an exam than it does to go down to Radio Shack and buy a citizens band radio.

It might be said that the caliber of person who can at least crack a book and memorize or take some time to learn the code might be just a littler higher than those who can't even read. Education of any sort will always produce a better idividual.

So I hope you are all correct. I hope the code doesn't make a difference, because once the precidence is set to do away with it, any type of theory is next. Then what will the difference between the amateur and citizen's radio services be?

> what it is to be young?

Well put Roger.
Aaron, do you picture little boys whispering

"Hey Billie. Wanna come over and see my dad's
QSL cards? One of them has the word TIT."

If you think something is wrong or vulgar, you teach
your kids that. You probably can't eliminate drug dealers
(for example) but you might be able to teach your kids
how to say no. Same with whatever your beliefs are about
things you consider vulgar. Teach them why you think
it's vulgar. The alternative is you could lock them
in the closet for 18 years.

MIL-SPEC means military specification. The dept of defense has very strict specifications regarding all aspects of a product's performance. Anybody that manufactures items for the military must meet the specs for their type product. The spec might mean that the product is strong and rugged, or that it will interface with other military systems, or that it will fit in a specific pocket on a infantryman's uniform. You have to read the exact specification before you can determine whether or not it is worth the ink it is printed with. Call the manufacturer and ask for a copy of the spec or if you are in a city with a large library they may have access to a book of specifications.

Jimmy,

MIL-SPEC is short for Military Specifications. The unit was built to very demanding specifications set forth by the Dept of Defense. This usually means the unit will perform under very adverse conditions.

Well thought out position, however.....what gives the FCC the RIGHT to
sell what they don't own? The radio spectrum is just like the
atmosphere that surrounds our planet. Does that give the "government"
the right to SELL AIR? I don't think so. What I think should happen
is we ALL (HAMS) get together and take the FCC to court for selling
what they don't own.

I would perfer Kim to be topless than YOU.
Ever been to Europe? In Zurich, there is a dock for sunbathing, and
they do go topless. It's right in the middle of town, on the river.
Nobody pays any attention to it, it's no big deal.
And there are other places in Europe and the U.S.that way as well.
You are so set in your archaic ways that nobody can reason with you.

Ah, but we're not talking about body parts, we're talking about language and how it is used. If there were no sexual intercourse there also would be no homo sapien families. Does that make it OK to use the word "F***ing" in a family setting like ham radio...

Get real! Tit, p-p, etc., all words to be used by children. The
only thing that is vulgar here are the minds of *some* old men.

I disagree. It is amusement solely for the kids -- just like
farting. Personally, I don't find it humorous. And, only a few
old men find it vulgar. (If we spell it "teat", then it is not
vulgar -- how about W5TEAT?)

I could understand that this was how these *old* men were raised,
but how do they continue with these views about vulgarity? What
is the logic behind it?. What is vulgar about "tit"? I guess
these are the same folk who make it unlawful for young women to
go topless.
It's not about family values, it's about the prejudice of *some*
old men.

The body part not obscene. The word is inappropriate in certain settings. I'm sure my grandkids use it on the playground, but not in the classroom, if they know what's good for them. There is a time and place for locker room language, and ham radio is not it...

Aren't you worried that children, who can be found on the
usenet/newsgroups/Internet will read what you write? Are you
trying to destroy the family setting of the Internet?

First, if Kim went "topless" on radio, would you know?
It's up to a woman (young or old) to decide on toplessness, etc.
It's not up to men, regardless of whether they approve or not.

ROFLMAO!
Maybe Aaron and Cal25Skipper should get together. They both lack any
intelligence or anything else.

Yea, No One here "ever" breaks a law? speeding in your car, (a differance
right?)
cheating on your taxes
taking a few "nuts and bolts" (paper clips,pencils) from work
twice on other posts, people who do not know me have insinuated I may be a
theif,
or a jammer...etc. simply for stating my opinion. (admittedly gruff)
i also asked for a mod to my IC 761 for 11 meter, to save myself the 70
mile drive to have it done at an Amateur Radio Store. (for which they
charge a mere $40.00) Is it illegal? did not know that.

I could not see using other freqs. to talk to the locals out here (guess I
could force them to become hams, or ignore them because they are not), or
to converse with my wife while she is in her car. For this I should buy
seperate equipment? Why? How many times have you'all used more power than
neccassary to have a qso? (never I'm sure...holier than thou)

I have learned from this article one thing: drive the 70 miles.

Admittedly, I like topless young women. And, heck, if society
didn't make it illegal and irrationally treat it as "dirty", then
I would see more of them. No, I'm not interested in the
professionals. So there, that's where my mind is. Nonetheless,
regardless of your desire or mine, I do not think that *men*
should be deciding whether women should be allowed to go
topless. Let them decide for themselves.

OK FOLKS, What's real now in regards to radio is: You can't fix these STORE bought items any more. You don't need the knowledge as back in early radio. My big stumble block is the 13 word code to advance to GENERAL. I'am not saying to delete the code, NO WAY. I wish it was easier, like radio groups have a bigger hand in helping to pass the test. I already passed the written once, it wasn't hard with a little study. By the way, I want to mention that the Monterey area radio fans are now using the old ARMY radio station at FORT ORD, taken over by the Parks and Rec's Dept. A great place for radio work and study.

It is now official! Amateurs checking in on, or even listening to 14313 on the twenty meter amateur radio service will develope "brain damage"!!! All this according to famous lawyer of the FCC, Mr Riley Hollingsworth!!

Some of the people who operated that frequency are already gone. Probably to insane asylums. BEWARE THE FREQUENCY OF 14313!!!! Some of them have developed elongated heads, turned into vibrator perverts, and are very reclusive in low income neighborhoods in the WVA mountains.

If I remember correctly, you were one of the people making comments along the lines that people who become "new extras" would not be considered "real hams", or would be inferior. To me, that is the same as "crowing"

> > No, I did NOT say that anyone that does not share *MY* personal views is

> to describe those who don't agree with your perspective on things.

Being open minded, tolerant, not being stuck in the past, non prejudicial and accepting of change is my perspective. If you wish to align yourself with people that are the opposite, then you are an "old fart". You may disagree with my perspective, and that is your right, but I believe that my viewpoint is likely to be more socially responsible.

>
> > Maybe I should have just said "Bigot". Look up the definition, and then

You can disagree with the FCC's decision, that's one thing . But if you look down your nose at people that have taken advantage of the FCC's "mistake", then you ARE being a bigot.
> >
> > Bummer! The world is full of people that may not agree with your view of

>
> The world is also full of people who may agree with me.

Yes, and I'm sure that the members of the KKK think the same thing.
Because there may be a quantity of people that share your viewpoint,
does not mean that it's necessarily the correct one.

>

By complaining about something, you are displaying your displeasure.
You are obviously bothered enough about this FCC deal to motivate you to
let your displeasure be known, even though it will not change anything.
Maybe you're not miserable, but you're far from happy.

>
> > As to liking me or not, that is your choice as well. I certainly won't

But you ARE tolerating me. By responding to this message, and continuing
this discourse, you are tolerating me to some small degree. If I can't
tolerate someone, I have to remove them from my presence, otherwise they
will cause me to get angry. I want nothing to do with an intolerable
person. I won't converse, or even allow myself to hear someone I can't
tolerate. I doubt if I make you *that* angry. I should not be that
important. Only people that matter should provoke strong emotions.

The pattern is that if you have nothing to say, that could deny the
statement, rip it apart for style.
The point is still valid that if "old time" hams cop an attitude with
newcomers, simply because of the new requirements, they are displaying
prejudice. If you fit into that group, then you are as well. If not,
then this doesn't apply to you.

>

> required to move on or move out.

I have no such inferiority complex. If someone cops an attitude with me,
they'd better be prepared for what comes back. And I'm not the one that
"expects" anyone to vacate the bands. I'm just repeating some of the
comments that I've heard. I can remember the "old farts" that I heard on
the air, belly-aching back when they started novice enhancement. They
couldn't STAND the fact that novices were getting phone privileges on 10
meters, 220 and 1296. Many of them stated that they were going to sell
any equipment that they had for those bands. They didn't want to
associate with novices. They felt that they were somehow "better" than a
novice. These same people pitched a bitch when the no-code was passed.
THESE are they types of people that I HOPE throw in the towel. I'm
sorry, but no one needs to be subjected to THAT kind of attitude. Ham
radio does not need people that discourage newbees. Ham radio needs more
elmers. I can't make these people leave, but I can HOPE that they get so
disgusted, that they leave on their own. *MY* feelings are not the
issue. Like I said, someone like that will get a verbal dressing down
from me if they cop that attitude. I'm just concerned about newcomers
becoming discouraged and leaving the hobby with the impression that
ALL hams are like that. I want to go on record as saying that I
welcome any newcomer, and will help them out as much as I can.

>
> > >

> algorithms is a lid on the air.

And there it is. That little prejudice. You believe, deep down inside,
that lack of CW proficiency automatically makes this guy a "lid". You've
already formed an opinion before you even get to know them. THAT was
what I was talking about.

You'd just better be careful that this guy doesn't think that YOU'RE the
lid, for wasting time learning an obsolete telegraphy skill rather than
becoming proficient in modern digital communications techniques.

That's fine. But if you look up the guy's call first, and discover that
he's a "new general/extra", and then expect him to be a lid, you're not
being fair.

> > >
> > > > >

As far as the subject of whether someone is a "REAL" ham or not, you
opinion IS irrelevant, since the FCC (the only voice that matters) says
that they are.

> > > Dave, I've passed all the written exams and a 20 wpm code exam.

> play the game of political correctness.

No problem, make your feelings known. But it's still a done deal, and
nothing you can say will change that. So any "venting" that you do is
nothing more than "sour grapes". So what remains is how you are going to
deal with the new people. Will you give them the shaft, and tell them
how "inferior" you think they are, or will you give them the benefit of
the doubt and help them in?

> some skill in its use.

The only reason that CW is used at all is because we dogmatically
insisted on requiring it. If the commercial sector has abandoned it,

wouldn't you think that they had a good reason for it? I predict that
now that 5 WPM is the limit, that CW usage will drop off dramatically.
And THAT is what scares the "CW forever types" the most. Less usage
means that eventually the FCC will reduce band space for it.

Then prove it. Most of the people that I know are not looking for
handouts, we just want "modernization". Find me anyone that just wants a
handout.

And that's all that matters.

Study? Who studied? I could pass the theory tests, drunk off my ass,
after 36 hours of no sleep. I live and work with this stuff. Code, was

not something that I needed, wanted, or had time for. I wasn't about to take time away from my many projects to learn a skill that I never intended to use. It makes no sense to do so.

Basic VHF, yes. But in order to get world-wide coverage (like the internet offers), you have to set up a more elaborate ham station. You also have to be cognizant of DX conditions, and the availability of DX stations. It's very much hit and miss.

Joe Schlatter wrote in message

(nothing but lies)

Here is a interesting article about some of the people you support Joe:

"We shall unleash the Nihilists and Athiests, and we shall provoke a formidable social cataclysm which in all its horror will show clearly to the nations the effect of absolute atheism, origin of savagery and the most bloody turmoil. Then everywhere, the citizens, obligated to defend themselves against the world minority of revolutionaries, will exterminate those destroyers of civilization, and the multitude, disillusioned with Christianity, whose deistic spirits will from that moment be without compass, anxious for an ideal, but without knowing where to render its adoration, will receive the pure light through the universal mainifestation of the pure doctrine of Lucifer, brought out in the public view, a manifestation which will result from the general reactionary movement which will follow the DESTRUCTION OF CHRISTIANITY AND ATHEISM, both conquered and exterminated at the same time." (Albert Pike, head of Freemasonry, the Scottish Rite, 1871)

Videos

UN Vehicles on U.S. soil "This document describes the plan to disarm the United States by turning over our Army, Navy, Marines, and Air Force to the United Nations...This program was to be carried out in three stages. Stage III outlines the final objectives of the disarmement program: 'In Stage III progressive controlled disarmament and continuously developing principles and procedures of international law would proceed to a point where no states would have the military power to challenge the progressively strengthened U.N. Peace Force...'"

Communist Rules for Revolution
A.) Corrupt the young; get them away from religion. Get them interested in sex. Make them superficial; Destroy their ruggedness.

'The United Nations was created by Communists, is controlled by Communists, and can only bring about a Communist world.'

B.) Get control of all means of publicity, thereby: Get people's minds off their government; Divide the people into hostile groups; Destroy the people's faith in their natural leaders; Always preach true democracy, but seize power as fast as possible; Destroy the nation's credit by overspending; Promote unnecessary strikes; Breakdown old values, and

C.) Cause the restriction of all firearms on some pretext with a view of confiscating them and leaving the population helpless.

The Illuminati Emerges in America

The Illuminati, which was founded on May 1, 1776 by Adam Weishaupt in Bavaria, Germany, had made its way to the young nation of the United States of America. It merged with highest Freemasonry in 1782 at the Council of Wilhelmsbad, Germany. It was designed to establish world government. There was a group of informed citizens who were aware of their diabolical plot to overthrow their new nation under an all powerful world government.

After the death of Adam Weishaupt in 1832, Giuseppe Mazzini of Italy took the helm of the Illuminati. He headed the revolutionary aspect of the movement. Later, Albert Pike of Little Rock, Arkansas, who headed all of the Ancient and Accepted Scottish Rite of Freemasonry worldwide, took over the philosophical aspect of the Illuminati. He worshipped Satan by name. He was an evil genius of the first magnitude.

He claimed Lucifer had given him the blueprint for world conquest to be concluded toward the end of the twentieth Century. He wrote a remarkable letter dated August 15, 1871, which until recently was on display in the British Museum Library in London, England. Albert Pike gave graphic details of plans for three world wars.
